Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Subject line says most of it. I know the Kenwood TS-820 has 'em and I've heard the TS-430 has 'em, but I'm not sure. I'm mostly interested in synthesized rigs, but any info is greatly appreciated!!!
Galen, KF0YJ

3. Hamfest List - Mid Atlantic States

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-01 00:43:38 UTC
From: cps@access.digex.net

MID-ATLANTIC HAMFEST LISTING March 31, 1994

The following is a listing of known hamfests in the MD/NJ/PA/VA area.
I will update this list as necessary. Please send any additions or
corrections to me at cps@access.digex.net so that others may benefit.

Thanks,

Chris Smolinski, N3JLY

April 10, 1994:

HAMCOMP '94 8AM-1PM, $5 adm, $12 tailgating, $20 table.
Trenton State College, Rt 31, Ewing Township.
Talk-In 146.67-, 146.52 simplex.
Contact Don Write AA2F (609) 737-1723.

May 15, 1994:

HAMFEST '94, 7AM-2PM, $5 adm, $8 tailgating, $12 tables.
Middletown Grange Fairgrounds, Penns Park Rd, Wrightstown, PA
Talk-In 147.09/R, 146.52 simplex
Contact: George Brechman N3HBT (215) 443-5656

May 21, 1994:

Cherryville Hamfest, 8AM-2PM, $6 admission, $10 tailgating, $15 tables
Warren County Farmers Fairgrounds, Rt 518 North, Harmony, NJ I78-exit 3.
Contact Keith Burt, KF5FK, (908) 788-4080 before 10PM
VE Test Session Contact Marty Grozinski, NS2K, (908) 806-6944 before 9PM
Talk-In 147.375+ & 146.820-

May 22, 1994:

Great Hagerstown Hamfest, 8AM-3:30PM, $5 adm, $5 tailgating, $20 tables
Hagerstown Jr COllege Rec Center, Exit 32B from I-70, right at Edgewood Rd
Contact Page Pyne or Fred Bailey (301) 714-0688
VE Exams 9AM contact Pat KQ8E at (304) 289-3576
Talk-In 146.34+

June 5, 1994:

Ole Virgina Hamfest, 8AM-3PM
Prince William County Fairgrounds, Manassas, VA

June 19, 1994:

Father's Day Hamfest, 8AM-3PM, $5 adm, $5 tailgating
Walkersville Fire Co, Walkersville, MD, rt 15 to rt 26 to rt 194
Frederick Amateur Radio Club, PO Box 1260, Frederick, MD 21702
Talk-In 146.52, 147.06+, 448.425-

July 10, 1994:

Maryland Hamfest, 8AM-?, tailgating opens at 6AM
Timonium Fairgrounds, York Rd, I-695 to I-83 to Timonium Rd
BRATS, PO BOx 5915, Baltimore, MD 21208
VE Exams 10AM, Pre-registration required
Talk-In 147.03+, 224.96-

July 16, 1994:

Red Rose Repeater Assn, 9AM-3PM $5 adm, $5 tailgating, $20 tables
McCaskey High School, Reservoir & N Franklin Streets, Lancaster, PA
Red Rose Repeater Assn, PO Box 8316, Lancaster, PA 17604
Talk-In 147.015+

August 7, 1994:

Southern Patuxent Hamfest, 7AM-2PM, $5 adm, $5 tailgating, $25 tables
Prince George County Equestrian Center, Upper Marlboro, MD
Rt 301/ Rt 4, exit 11-A (Rt 4 Pennsylvania Ave) from DC Beltway I-495
Contact: Southern Patuxent ARC, PO Box 399, St Leonard, MD 20685
(410) 586-2177
Talk-In 147.15

Hamfest 94, 8AM-?, $5 adm, $3 tailgating
Bucks County Drive In Theater, rt 611, 6mi N of Pa Turnpike exit 27
Mid Atlantic Radio Club, PO Box 352, Villanova, PA 19085
Talk-In 147.06, 145.13

August 14, 1994:

SARA Carroll County Hamfest, 8AM-?, $5 adm, $5 tailgating, $8 tables
Carroll County Ag Center, Smith Ave, Westminster, MD
Contact: Alan Parker, KS3L, (410) 859-1475
SARA Hamfest, 607 Brentwood Rd, Linthicum, MD 21090
Talk-In 146.52, 224.68, 224.64

Hamfest & Computerfest, 8AM-?, $4 adm, $7 tailgating, $25 tables
Career Institute of Technology, Easton, PA
Delaware-Lehigh ARC, RR 4 Greystone Bldg, Nazareth, PA 18064-9211
(610) 820-9110
Talk-In 146.70

September 9 & 10, 1994:

Queen Wilhelmina State Park, Mena, Arkansas. $2 park entrance fee, $5 adm.
Contact Gerald Wallis, N5KKD, (501) 524-3094

September 17&18, 1994:

Virginia Beach Hamfest $6 adm, $15 tailgating, $30 tables, $125 booths
Virginia BEach Pavillion
Manny Steiner, K4DOR, 3512 Olympia Lane, Virginia Beach, VA 23452
(804) HAM-FEST

September 18,1994

South Jersey Radio Assn, 8AM-3PM, $5 admission, $5 tailgating
Pennsauken High School Parking Lot, near US rt 130 / NJ rt 73
Contact Diane Nafis, N2LCQ, (609) 227-6281, (609) 228-8088

: : novelties now, but they are more xepnsive to built than RF processors.
: : Why AF clippers are worse than RF (IF) clippers? Consider a 500Hz
: : tone test. With AF processor you will get extra 1000,1500,2000,2500
: : Hz tones. With RF (SSB and DSB) processor 500Hz will be the only
: : output. Please note that some older rigs have "implicit" RF
: : processors. For instance, SWAN 500 has 7360, a beam deflection tube,
: : as a DSB modulator. By clipping peaks, it acts with the following XTAL
: : filter as a DSP processor.
: :
: If you clip an ideal DSB waveform (1 kHz modulation), aren't there

Oops, this should be 500 Hz modulation, not 1 KHz modulation in the
parenthesis.

: two tones spaced 1 kHz apart that could generate IMD products at
: 1.5 kHz and 1.5 kHz (receiver output)? What if you had a significant
: amount of carrier leakthrough that was cleaned up by the crystal
: filter? Couldn't this give you extra tones at 1, 1.5, 2, and 2.5
: kHz (at the receiver)?

What this means is that having two crystal filters, one before and
after the clipper, results in less distortion on your transmitted
signal. The extra filter can also be useful on receive, since IF
amplifiers typically reintroduce noise on the unwanted sideband
detected by most product detectors. It isn't difficult to obtain
matched sets of crystal filters, if you have enough $$$.

5. Source for RF Power MOSFETS (IRF511)

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-01 01:19:39 UTC
From: asirene@ntuvax.ntu.ac.sg
Message-ID: <1994Apr1.091939.1@ntuvax.ntu.ac.sg>
Source record: 269121
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc

Hi,

Can anyone tell me a source for IRF511/510 MOSFETs? Also are there other types of MOSFETs suitable saw a power of 40 or 50
watts range? Where can I get them? Tks.

73,
Daniel

6. THE problem with THE hams HERE.

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-01 02:06:00 UTC
From: FISHERB@a1.mec.mass.EDU
Message-ID: <01HAMZKI0WGG000BVS@mr.mec.mass.edu>
Source record: 269122

Frequently I hear hams say, THE name HERE is_____.
How often do you say when you meet someone (assuming your name
is Tony), THE name HERE is Tony? You never do that right? After
to do so is so impersonal and assinine that you would not want
to seem like a fool-then why do it on the air? Just because you
are a ham is no excuse not to be personal. Of course you could
really sound like THE jerk of the year by saying, THE first
personal here is Tony (at least if you are not personal-you are
using the word-albeit it in an extremely impersonal way).
Also why say "here", is your name any different when you are "there?"

73 from we here (not there) at K1OIK where THE name are Burt.

Yes Virginia,

There is a Transverter Jack on the TS-430. It is an 8-pin DIN connector
used to interface a VHF or UHF transverter. (I am quoting the manual. I
never used it....)

73,
Joe N8IPC

8. Re: Why say 73ss?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-01 02:45:46 UTC

Source record: 269125

Gary Davis (gdavis@griffin.emba.uvm.edu) wrote:

: Why is it necessary to use 73s when addressing either a group or individual
: when clearly 73 is already plural?

It's an idiom. A normal linguistic evolution that makes sense unless
you think about it. Like "ice water." Plural words in English
usually end with "s", so when "73" was imported from Morse as a word,
people though it sounded stupid without the "s". They're right. It
does.

: Would you say congratulationes to the bride and groom. Certainly Not, since
: congratulations is already plural.
: There appears to be much hear-say mouthing of jargon without the slightest
: idea of what it means.

Boy, is that ever true! Everyone knows you're supposed to say "Best
Wishes" to the Bride, not "Congratuations." Some people!

: The latest idiocy seems to "destinated"... what ever that's supposed to
: mean. " Well, Bill, we're destinated so 73ssssss"
: and 73 thirds to ya.

"Verbing nouns weirds language." - Calvin

Well, I'm destituted. See ya. Oh, and 73s! (BIG :->)

>Cellular phones do this all the time, including pocket sized ones.
>In fact some of them are smaller than any ham HT that I know of.

Cellular phones have three advantages over 2 meter remote base stations:
1) They operate at higher frequency. This cuts down the size of a duplexer quite a bit.
2) They operate at a *much* greater frequency seperation between receive and transmit: 45 MHz, which is roughly 5% of the transmit frequency, as opposed to 600 kHz, which is roughly .4% of the transmit frequency. This means that the cellphone duplexer doesn't have to be as effective, which means that it can be smaller.
3) Cellphones operate at much lower powe, which makes the duplexer's job easier still: it doesn't have to provide 60-70 dB isolation between receive and transmit in the first place.

The original poster's comment was quite correct.

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACTIVITY

31 MARCH, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACTIVITY INDICES FOR 31 MARCH, 1994

NOTE: The intense stratospheric warming covers the polar region at 10 HPA.
Mean zonal winds at 60N are continuously weakening and will begin an
easterly direction at the beginning of April at 10 HPA. The
temperature gradient is reversed from 60N and the pole in the middle
and upper stratosphere from 30 HPA upwards and in the lower
stratosphere during the next day. The final transition to summer
conditions is expected to take place during April.

SYNOPSIS OF ACTIVITY

Solar activity was very low. Only minor optically uncorrelated B-class events were recorded this period. A limb event in the form of an eruptive prominence occurred on the west limb at S16 between 31/0601Z and 31/0735Z. Maximum radial extent was 0.29 solar radii. Region 7698 (S17W11) has shown some growth over the last 24 hours. All other regions are stable and quiet.

Solar activity forecast: solar activity is expected to be very low to low. Region 7698 exhibits the best chance of producing C-class activity.

The geomagnetic field has been at quiet to unsettled levels for the past 24 hours.

Geophysical activity forecast: at middle latitudes, the geomagnetic field is expected to be mostly unsettled on day's one and two becoming active on day three. At high latitudes, the field is expected to be unsettled on day one, mostly active on day two with active to minor storm conditions likely on day three. A favorably positioned recurrent coronal hole feature is expected to produce the activity beginning on day two with active to storm conditions likely to persist through 11 April.

Event probabilities 01 apr-03 apr

Class M 01/01/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 01 apr-03 apr

A. Middle Latitudes
Active 15/25/30
Minor Storm 10/15/30
Major-Severe Storm 05/05/10

B. High Latitudes
Active 15/25/30
Minor Storm 10/15/35
Major-Severe Storm 05/05/15

HF propagation conditions were normal over all regions. Normal conditions are expected to persist through 02 April. On 03 April, a well-placed coronal hole is expected to begin elevating levels of geomagnetic and auroral activity. Minor to major storming is expected to accompany this disturbance over the ensuing days in early April. Based on recurrence, this disturbance could keep propagation conditions well below normal for most of the first two weeks in April.

PRODUCT PRESS RELEASE NET POLICE INC.
APRIL, 1994 DISTRIBUTE ALL FEEDS

Are you like me? You sit down for a few hours to listen to
a ham net and just relax. You tune up on 40 or 80 meters,
everything is going great, not a thunderstorm in earshot,
and then just as you begin writing down the phone number of
the fellow selling the mint Collins tx/rx pair for $200, the
numbers fade and are replaced by a 2000+ watt
"belchhhhhhhhhhh", "burpppppppp", or "yawnnnnnnnnn". The
repeat is similarly stomped. You only get the area code.
You curse under your breath. Hoping for a "recheck", you
listen carefully only to be deafened by a 40 over 9 carrier
and then you begin to moan and cry softly. Later you toss
and turn all night dreaming about a QRM-seeking missile.

Well, soon your prayers will be answered ...

You've heard about "voice printing" and recently the FCC's
use of "transmitter signatures", and now YOU will have some
help fighting the most fearsome of all amateur radio
monsters, the dreaded "QRMer" ...

NET POLICE INC. is happy to announce the introduction of a
new high-tech tool which will become the QRMer's worst
nighmare ...

THE BELCHprinter (tm)

The BELCHprinter (tm) is NET POLICE INC.'s triple threat
answer to this age old problem. Using modern DSP and RISC
microprocessor technology, the BELCHprinter unit is
connected to the audio and IF feeds of your receiver. When
the console unit's trigger is depressed, the BELCHprinter

takes an IF and audio sample and extracts a unique numeric print of the QRMer and his transmitter (when using the optional high accuracy clock unit). The number is compared with other existing prints and duplicates are merged. Then a unique numeric ID is shown in the BELCHprinter's display. The unit stores 2048 prints in nonvolatile memory. With the optional RS-232 interface and software package, the unit can be combined with your PC to form a complete QRMer identification system with almost unlimited storage. To help further ID the QRMer, the BELCHprinter can be instructed to sample the signals of a known transmitter/operator and thus unknown QRMer prints can be identified. The built-in database in the BELCHprinter software can of course hold call and name information.

A follow-on packet radio product is expected to be ready soon which will allow the exchange of QRMer print records between BELCHprinter owners so national and global databases can be constructed. NET POLICE INC. will also be serving as a repository for print records and will be distributing a CD version of the entire BELCHprinter Database (tm) as soon as sufficient prints have been collected.

Hang in there. You'll get that Collins or Kenwood yet ...

And coming soon ...

BELCHsquelch (tm)

The first production BELCHprinter units are currently undergoing alpha tests around the country and orders will be accepted shortly. Prices have yet to be determined, but should be in line with other modern amateur radio accessories. You may contact NET POLICE INC. for further information on the product and associated accessories.

Discounts are being considered for sales to recognized net control stations as a courtesy to the amateur radio community.

model#	description	MSRP
BLCH1	BELCHprinter unit, manual, patch cords	TBD
BLCH1a	RS-232 control, software for IBM compatible PC	TBD
BLCH1b	high accuracy clock unit for BLCH1	TBD
BLCHcd	CDRom print database (requires BLCH1a)	TBD

Distributor inquiries are encouraged.

>

You're right about the terminology. I do think that Gary C's original post was refering to people trying to use his repeater through cross band repeaters, and then Gary McD used the term remote base which I unconciously translated to cross band repeater. Maybe Gary McD can restate his question. I will now repeat to myself "Read every word...Read every word..."

73,
Mike, KK6GM

Since you refer to small size, I guess that by "this" you mean the duplexing. The difference is that there is never an overlap between the transmit band and the receive band in cellular. There is also a channel TX/RX spacing of 45 MHz (about 5% of center frequency), and an isolation band 18 MHz wide between the TX and RX bands. OTOH, the duplexer I refered to above would not only have to deal with our much smaller TX/RX spacings (0.6 MHz at 146 MHz, about 0.4%), but also the situation where one time the radio may be transmitting on e.g. 147.60 and receiving on 147.00, and the next transmission may be transmitting on 147.015 and receiving on 147.615. Thus there is no dividing line between potential transmit frequencies and potential receive frequencies.

Anybody out there who knows about cellular circuitry might tell us whether cellular duplexers are generally fixed or electronically tuned (maybe on the receive side only?).

Mike, KK6GM

21. Time to lighten up.....

Time to interject some humor here. I spotted this in the Yucks digest and
just knew it belonged here....

I was toying with using search and replace to insert Jeff Herman's name in
this, but figured that the rest of you would figure it out on your own.

73 es GE from Jeff

Subject: [yucky stuff] Zsolt Szabo is DEAD!!!
To: Gene Spafford <spaf>

JOHNS HOPKINS (ANP) - Zsolt Szabo, the self-proclaimed genius who has
gained notoriety for his absurd net postings, was found dead today
at his terminal. Cause of death is unknown, but police detectives
believe that he may have suffered from an overdose of EGO, a new
and highly addictive narcotic. An autopsy has been ordered, but
there is little chance of finding anything as the brain is usually
consumed. Amazingly, the drug allows the person to continue to
live, although admittedly in a severly reduced capacity, for up to
2 days after the last traces of the brain have degenerated.
Police have been perusing the last few articles posted by the
late Mr. Szabo on a computer bulletin board, referred to only as
"that advocacy thing" by the detectives. A search of his apartment
also turned up several photographs of a fashion model that he has
apparently been stalking for the past few months. The only other
evidence that the press was allowed access to was a series of words
drawn in human feces on the wall of the deceased's apartment. Most
of the words suggest an anal-fixation and are not printable here, but
there were several that appear to be code words, including "730",
"mbyte", and others. Police speculate that the former was the time
that the deceased finally expired and that the latter was in reference
to some sort of sado-masochistic sexual implement.
Although very little information can be found about EGO, there is
increasing speculation that it may have been around longer than some
suspect. Each canister of EGO, which is a gas, has the letters "JY"
engraved on it, along with the picture of what appears to be some
sort of bird, perhaps a falcon. Unlike some narcotic gases, EGO is
not an inhalant, at least in the traditional sense. The nozzle is
acutally inserted into the anus and the gas is release into the
intestines for absorption. This admitttedly bizzare method may be
the cause of the intense anal-fixation exhibited by users in the
final stages of the addiction.

22. Re: Voice mail on a repeater?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-01 09:36:07 UTC
From: jeffl@comix.UUCP
Message-ID: <812@comix.UUCP>
Source record: 269039

In article <2nf2sm$rt6@cosmos.nectech.com> rbono@cosmos.nectech.com (Richard J. Bono) writes:
>It's amazing that some 'new' hams don't seem to know what to do without
>a *beep*!

In Santa Cruz, our club is about equally divided between
the "old timers" and the "new hams". It's the old timers that
time out the repeater (3 min) and step on the tail of the previous
transmission. My guess is that this comes from DX pileup manners
where courtesy is optional.

>By the way, by 'new' I mean those who weren't around before repeater beeps
>were common! It wasn't that long ago!

We had beeps before the new fancy controllers. It was the intermod
and feedback generated when the repeater was talking to itself after
the signal dropped on the input. Some of the early transistor rigs
also had a nice solid DC transient when the squelch poped. The
loud bang of the speaker cone trying to shove its way throught the
grill was the clue that the carrier had dropped.

>Even with no squealch tail, a person can determine when to speak. If this
>wasn't possible, then people would have a lot of trouble communicating
>with the telephone!

One of my college psychology research projects was on this subject.
We recorded "normal" conversation and measured when both speakers
were talking simultaneously. I can't remember the exact figures but:
Normal conversation 5% overlap
Animated debate or arguement 10%
My Polish relatives 30%
TV political interviews 10%
Loud party 20%
My point is that with simplex or half-duplex radio, the art of NOT
tromping on the other guy is unique and unusual and probably requires
some practice. Methinks beeps don't make any difference. Whenever
we have 3 or more hams engaged in a heated arguement, everyone steps
on everyone else, beeps or no beeps.

>is going on, and just wait for the beep to transmit. So breaking stations
>get ignored or tranmitted over. It's really up to the operating habits of
>the stations involved. A pause can be more effective without the beep!

I'm not so sure. While returning from a trip, I had an auto
accident occur in front of me. The only repeater available had
a conversation running, so I tried to break in. Not a chance.

Even though I could tell that I was being heard, I was being ignored. I didn't wait around and hopped the fence and used a payphone. (This was before commodity cellular phones).

> Beeps breed bad habits!
I guess so. However, there are many worse habits practiced on repeaters. The long winded monologues are disgusting. If you quiz the participants on the contents of their own transmission, they can usually remember on the very last thing they pontificated upon.

The bad operating habits brings up an interesting problem. The local ARES organization holds regular SET (Simulated Emergency Test) drills. They give the most inexperienced hams the maximum amount of practice. The result is that the newly licenced hams hear only beginners on the air and proceed to mimic all their mistakes. Fairly soon, all we have are permanent beginners repeating each others mistakes. This is the way it works on repeaters. A new ham listens for a while, hears all the bad practices, and proceeds to do likewise. Perhaps this is how bad habits are propagated?

.....(beep)(blap)(burp)(kerchunk)

Posted-By: auto-faq 3.2.1.2
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.6 12/26/93 15:45:09
Changes: Added new index file, Gopher, WWW, and WAIS entries

This administrivia file and the companion Amateur Radio Elmers Resource
Directory are intended for non-commercial distribution via Usenet. Any
other uses, please E-mail for permission.

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.
Some of the more amusing are described at the end of this article.

Regardless of origin of the name, a "Ham" is universally recognizable as
one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or
designing TCP/IP packet networks, such experimentation has historically
spilled over into the mainstream such as was the case with Edwin
Armstrong, who developed the regenerative oscillator and FM radio, or
General Curtis LeMay (W6EZV) who was instrumental in making Single-
Sideband the communications standard for the Strategic Air Command
(1947-1992, now reorganized into a joint command called USSTRATCOM) and
eventually the U.S. Air Force. Although packet-switching techniques
originated from DARPA (Defense Advanced Research Projects Agency) and
the ARPANet, no one can deny the tremendous influence that amateurs
have had in demonstrating the viability of TCP/IP and AX.25
communications via radio links. The efforts of AMSAT (the Amateur
Satellite Corporation), including the development of many ham satellites
and the low-orbiting Microsats (communications satellites no bigger than
a breadbox that use store-and forward packet techniques), have certainly
advanced the state-of-the-art in communications, one of the defined
purposes of the Amateur Radio Service, as recognized by international
treaty.

Since in many cases hams are writing "the book", there is often no
"book" or other established reference for a beginner to refer to.
Traditionally, information has been passed on from ham to ham via word-
of-mouth. Like many of the traditional crafts, a variation of the
Master-Apprentice system has emerged, the Elmer-Novice relationship.
Called "Elmers" because they are usually older and wiser, having the
```

benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@unomaha.edu, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion posting to this message, "Amateur Radio: Elmers Resource Directory." Since the list is cross-posted to rec.radio.amateur.misc, rec.radio.info, rec.answers, and news.answers on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp.cs.buffalo.edu /pub/ham-radio/elmers*
rtfm.mit.edu /pub/usenet/news.answers/radio/ham-radio/elmers/*

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use. (I'd appreciate feedback on whether or not you find them useful, though.)

5. Internet Gopher: The latest copy of the list should be available from the following Gopher sites, all at standard port 70:

cc1.kuleuven.ac.be
jupiter.sun.csd.unb.ca
gopher.univ-lyon1.fr
ftp.win.tue.nl
gopher.win.tue.nl

see also comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available from the following WWW site:

URL: http://www.cis.ohio-state.edu:80/hypertext/faq/usenet

under pages:

radio/ham-radio/elmers/admin
radio/ham-radio/elmers/index
radio/ham-radio/elmers/list
radio/ham-radio/elmers/diff

see also comp.infosystems.www

7. Wide-Area Information Service (WAIS): The latest copy of the list should be available from the WAIS server at rtfm.mit.edu (standard port 210) in database "usenet."

see also comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

--
73, Paul W. Schleck, KD3FU

pschleck@unomaha.edu (personal mail)
elmers-request@unomaha.edu (Elmers List administrivia)

* Possible origins of the word HAM:

The acronym "Home Amateur Mechanic" or...

from the Cockney pronunciation of "L'amateur" or...

the initials of the founder of the American Radio Relay League, Hiram Maxim, W1AW (his actual middle name being Percy apparently notwithstanding) or...

from the call letters of one of the first amateur stations at Harvard, H.A.M. (please, no flames from W1XM at MIT)

Dale Mosby, N7PEX, offers the explanation that HAM must stand for "Hardly Any Money," considering the investment one could make in the hobby.

Knowledgeable individuals from the American Radio Relay League (ARRL), and other radio historians, seem to agree that the terms "Ham" and "Lid" (an inept operator) both originated with landline telegraphy. A "Ham" was a show-off and a "Lid" was a telegraph operator so inexperienced, he had to use a pot or can lid to rest his telegraph sounder on to properly copy the code.

As an interesting historical footnote, early telegraph operators may have been the first to experience the infamous curse of our communications age, Repetitive Stress (or "Carpal Tunnel") Syndrome (called "Glass Arm" in those days, which encouraged the invention of the semi-automatic or "bug" key).

(Larry E. McDonald, N6ZMB, wrote to point out another plausible origin, which doesn't necessarily contradict the ARRL version. The term "ham" may have been derived from "ham-fisted" or "ham-handed" to describe poor telegraph operators who were hired from the ranks of radio operators. Or maybe "ham-fisted" and "ham-handed" are derived from "ham." Who knows?)

1976-1978 FCC Personal Users Radio Advisory Committee
Task force for rules Rewrite Citizens Radio Service
Rules Interpretation

1988-Present Stratus Computer/ Technical Support Engineer

I am CEO of Creative Media Productions a multimedia consulting
company.

Address: Jay_Appell@cac.stratus.com
Telephone: 1-508-478-6969 X200 at Creative Media Productions
1-508-478-1429 24 Hour Ham radio BBS and other topics

I enjoy SCA reception and multimedia use in Amateur Radio. If anyone would
like to reach me by modem, 508-478-1429 (24 Hr) BBS 14,400.

I have been referred to as the ham responsible for digital users manuals
in amateur radio. The first manual was the DJ-590 and subsequent manuals
included the 560,580 and 600 for Alinco. My contacts in the amateur radio
community have helped other amateurs to know more about products, hidden
features and new product offerings. The BBS will now included the latest
info on YEASU and ALINCO products. If you have a product that you wish to
have evaluated for the general amateur community, please contact before
sending.

If you have questions with regard to customer service at these
companies, please forward to me and they will be passed to the company
contacts.

Author of the following MS-DOS ham programs:

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam
compatible)
AutoCall - Allows use of the Buckmaster HAMCALL CD-ROM online callbook

with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's
SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available from wuarchive.wustl.edu under
/mirrors/msdos/hamradio or write me at:

7 Red Field Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

Radio Frequency Interference (RFI) matters
Equipment Testing

I want stories about automotive EMI problems, dealings with dealers, and, if possible, solutions. I plan to forward these to my contact at the Society of Automotive Engineers (SAE).

If anyone knows the *right* people at any particular company, I want to know. I am also pursuing (via the SAE) more official channels.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Electronic versions available soon. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

Many amateur radio informational documents (including EMI/RFI files) are
also available from the ARRL info server. Send E-mail to info@arrl.org
with the word "HELP" in the message body.

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing
your way to hamdom, the cheapskate's approach, let me
know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors
and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

Steven M. Knapp KA9QOA Computer Engineering Senior
sknapp@iastate.edu Vice President Cyclone Amateur Radio Club
Iowa State University; Ames, IA Durham Center Operations Staff

A few members of our ham radio club were interested in helping out.
Since our turnover is usually 4 years or so (graduation is a horrible
thing), I thought it may be difficult for us to keep the list up to
date. I thought that by creating a local mailing list called
"elmers@iastate.edu" we could add or remove people as need be. There
would always be at least one person receiving mail on that list,
usually more! Even after I graduate, this list will be maintained
allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience,
much repeater experience, in addition to a considerable background in
theory, as many here are electrical engineering or computer engineering
students. If a question can not be answered by the readers of the list,
there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local
disabled hams (or hams to be) get on the air. But anyone local who
needed help would find a group at their door ready to work.

Amiga 1000, WB 1.3 | INTERNET: salnick@DejaVu.spk.wa.us
WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help
troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service their
own equipment. I would like to see a turn-around here...

Someone on here said that "saying 73 without the s sounds stupid."

To me, '73' is merely a code, or token that stands for something else.
In this case it is "best regards", which is plural.

I just make a simple substitution: '73' instead of 'best regards'. Is
that too difficult to comprehend?

73

--Steve Hideg
hideg@erim.org

p.s. My repeater beeps and has an autopatch. My users love it, and don't
abuse it.

Hell, I think Radio Shack carries the IRF511. Probably expensive though.
Try Digi-Key.

29. GB2RS News 3rd April 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-01 13:49:42 UTC
From: dave@llondel.demon.co.uk
Message-ID: <765958492@p0.fido.sub.org>
Source record: 269045

FOLLOWUP-TO: uk.radio.amateur
Realname: David Hough
Good morning. It's Sunday the 3rd of April and here is the GB2RS news broadcast, prepared by the Radio Society of Great Britain.

First the headlines:- Amateur radio is featured on children's TV on Thursday; space station Mir can be heard on two metres, channel S22; and poor propagation is forecast for the coming week.

Amateur radio will be featured this week on the BBC TV series "Why Don't You?". The broadcast, which is scheduled for 9.30am next Thursday the 7th of April, is primarily aimed at young people aged around 9 to 14. The amateur radio feature is approximately six minutes in length and presents the hobby as modern and exciting, and features everything from crystal sets to packet radio. Members and friends of Rishworth School Radio Club, in Yorkshire have been heavily involved in making the programme.

Users of two metre channel S22, 145.550MHz, are reminded that this frequency is used by the amateur radio station on board the Russian space station Mir. There are five orbits each day and the window for contacts with the UK lasts about ten minutes. You may be asked to move from this frequency, or to stand by, for a few minutes to allow these space contacts to take place, and your cooperation would be very much appreciated.

The newly formed group of educationalists, STELAR, which stands for Science and Technology through Educational Links with Amateur Radio, will be running a four day residential course this week. The course is for teachers from schools with no previous amateur radio links. During the course, which is sponsored by Trio-Kenwood UK Ltd, a special event station will be active using the call sign GB2SR. It will be on the air on the evenings of Monday the 4th, to Friday the 8th of April inclusive. Check for SSB on or near the following frequencies, 3.766MHz, 7.048MHz, 14.165MHz, 21.287MHz and 28.428MHz The station will also be active on packet radio, and messages for demonstration purposes would be welcome at GB2SR via GB7MSW on 144.650MHz.

The RSGB's Senior Novice Instructor for Dorset, Phil Mayer, G0KKL has changed his address. He now lives at: 16 Haig Avenue, Canford Cliffs, Poole, Dorset, post code BH13 7AJ. His telephone number is 0202 700903. All enquiries from Dorset Novice Instructors should be sent to G0KKL at that address.

Attention RSGB members in Norfolk: A new RSGB Liaison Officer (RLO) has been appointed for Norfolk. He is Bill Higgins, G3PNR, and his address

is 65 Hayden Court, Eleanor Road, Norwich, Norfolk, NR1 2RG. Bill's telephone number is 0603 629150. RLOs hold a wide range of information and they are available to help any RSGB member seeking advice.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Spratly Islands, a group of East Malaysian and Japanese operators is active using the callsign 9M0A from Layang-Layang Island, from now until Wednesday the 6th of April. Operation is on 160 - 10 metres on CW and SSB.

From St Vincent, DL7FT will sign J87BZ from now until Friday the 8th of April. Check these frequencies: 3.789, 7.075, 14.195, 18.128, 21.290, 24.932 and 28.490MHz

From Trindade Island, PY1UP will sign PY0TUP from now until August on all bands using CW and SSB.

And from Nigeria, DL9GMM will be active as DL9GMM/5N0 from now until December 1994. Activity will be on all bands 10 - 80 metres, on CW using wire antennas.

Rally news now:

We know of the following event(s) for today, Sunday the 3rd of April:

The 8th Launceston Amateur Radio Rally is being held at the Launceston College. Doors open at 10.30am. The event features trade stands and a bring and buy stall. Refreshments and hot snacks will be available and talk-in will be on channel S22.

The 28th White Rose Amateur Radio Society Rally is being held at the Allerton High School, Links Lane, Leeds. The event features the usual trade stands and a bring and buy stall.

Tomorrow, Easter Monday, the 4th of April, the Centre of England Rally and Satellite, Computer and Electronics Show takes place. This is to be held at the Sports Connection Centre, Leamington Road, Ryton which is on the Dunsmore to Coventry road, the A45/A423. Doors open at 10.30am. The event features over 80 trade stands and a bring & buy stall. Refreshments will be available all day and talk-in will be on channel S22.

Next the Rallies for Sunday the 10th of April:

The Leiston Amateur Radio Club Car Boot Sale is to be held at the Solar Car Park, off Sizewell Road, Leiston, Suffolk. Doors open at 10am. This event is a radio-oriented car boot sale. Further details can be obtained from G3MYA who address is correct in the RSGB Call Book.

Also on the 10th, the Lough Erne Amateur Radio Club Mobile Rally is to be held at the Killyhelvin Hotel, Enniskillen, Co Fermanagh. Doors open at 12 noon. The event features trade stands and a bring and buy stall.

Talk-in will be on channel S22 by GI0LEC. Further details from GI6JPO, Tel: 0365 87761.

The third event on the 10th is the Swansea Amateur Radio Society Rally which is to be held at the Swansea Leisure Centre, situated on the Swansea/Mumbles coast road, the A4067. Doors open at 10.30am. The event features trade stands, repeater group stands, operational HF and VHF multi mode stations and a bring and buy stall. Refreshments will be available. Talk-in by GB2SWR is on channel S22. For further details contact Roger, GW4HSH on 0792 404422.

Now a date for your diary:

The RSGB National Mobile Rally is to be held at its usual venue on Sunday the 7th August at Woburn Park, Bedfordshire. For further information contact Norman Miller, G3MVV on 0277 225563.

HF contest news now:

The SP DX SSB Contest is taking place this weekend and will finish at 1500 UTC today, Sunday the 3rd, after 24 hours. Bands are 1.8 to 28MHz, excluding the WARC bands.

The Holyland Contest is also active this weekend and is scheduled to finish at 1800 UTC today, Sunday the 3rd. Entrants may use CW or SSB and the contest covers 1.8 to 28MHz, excluding the WARC bands. The HF News column in the March edition of Radio Communication carries further details of both of these events.

The first in this years series of RSGB QRS (Slow Morse) Cumulative Contests will take place next Tuesday the 5th of April from 1900 to 2030 UTC between 3.540 - 3.580MHz. See April RadCom page 8, for further details and January's RadCom, page 83 for the rules.

The RSGB RoPoCo-1 Contest will take place next Sunday the 10th of April from 0700 to 0900 UTC between 3.520 - 3.570MHz, CW only. The contest exchange is rather complicated so participants are advised to consult the rules which can be found on page 93 of the March RadCom.

Next some VHF contest news:

The next RSGB contest is the 1.3 and 2.3GHz Fixed Station and Listeners Contest which takes place next Sunday the 10th of April from 1700 to 2100 UTC. See February RadCom, page 83 for further details.

Now a progress report on the South Yorkshire VHF repeater, GB3NA, which is currently off the air. Before the repeater can return to service, a number of matters need to be resolved. To this end, the RSGB is meeting with the Radiocommunications Agency in
he very near future. Further information can be obtained from the RSGB Zone A Council Member Peter Sheppard, G4EJP whose address is correct in the current RSGB Call Book.

The Blandford 70 centimetre repeater GB3DT, became operational again on Saturday the 12th of March after being out of service since last August during essential repair and renovation work on the antenna tower. The repeater is located at Blandford Camp in Dorset and operates on channel RB0, which has its output on 433.000MHz and input on 434.600MHz. Further details and/or reports should go to the repeater keeper G8BXQ, whose address is correct in the RSGB Call Book.

The Hornsea 70cm Repeater, GB3HA, area on channel RB6 is temporary off the air. For further details contact the repeater keeper Richard, G4YTV, whose address is correct in the RSGB Call Book.

The 2 metre Repeater, GB3TP, covering the Keighley, West Yorkshire area, on channel R5 is now non operational due to a fault. For further details contact the repeater keeper G3RXH, whose address is correct in the RSGB Call Book.

The RSGB makes the GB2RS Main News available on a premium rate telephone line for anyone unable to listen to the news in any other way. The number is 0336 707394. From last Friday, the cost of calls went up to 39 pence per minute at cheap rate and 49 pence at all other times. Full details of the GB2RS transmission schedule can be found in the latest edition of the RSGB Call Book.

And now the solar factual data

The period from the 21st to the 27th of March, has seen only a very slow recovery with solar activity very low in most parameters. No flares have been reported, but magnetic activity, though considerably reduced, is still very unsettled. The only event of note during the period is the continuation of the stratospheric warming which now covers central and southern Europe extending to the pole at levels above 10 hecto pascals, about 30 kilometres. Sunspot indices have meaned about the 41s, not varying much day to day. The solar flux has also been almost steady and averaged 90 units. The 90 day mean flux on the 25th was 105 units.

The geomagnetic activity levels have declined but the passage of coronal holes is still keeping geomagnetic levels very unsettled, the Ap indices were up to sub-storm levels of 27 units on the 21st, but had declined to just unsettled levels of 12 units by the 27th, giving an average of 17 units for the period. The state has been 'Strat Warm' throughout the period with otherwise nothing to report. We have now caught up with the aa indices, so here are details for the 8th to the 14th of March. Due to the passage of coronal holes, levels on the 8th to 12th were up to 'storm', with periods up to 115 nanoTeslas, K6. The daily averages for the period were 60.2 nanoTeslas, about K4. The period from the 15th to the 21st has seen the magnetic disturbances decline from a daily level of 60.9 nanoTeslas on the 15th, to 23.2 nanoTeslas by the 20th. The weekly average was 40.4 nanoTeslas, about K4 'just unsettled'. The X-Ray flux levels are slowly recovering and rose from A5.4 on the 21st up to B1.0 by the 25th. They declined again to A6.7 units by the 27th, giving an average of A8.3 units for the period.

I'll repeat the figures. Spots - 41; Flux - 90; Ap index - 17; X-ray flux - A8.3.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon, averaged 7.9MHz, with the darkness hour lows averaging 3.3MHz. The 24th was a good day with levels up to 9.4MHz, otherwise there was little variation from day to day.

I'll repeat the figures. Highs - 7.9MHz; lows - 3.3MHz.

Now the ionospheric data for the north:

The F2 daytime critical frequencies at Ekaterinberg averaged 6.3MHz and the darkness hour lows 2.4MHz.

I'll repeat the figures: Highs - 6.3MHz; lows - 2.4MHz.

And next the solar forecast:

This week, the active side of the sun will be rotating away. Solar flux levels are expected to be the 95s. Geomagnetic levels are expected to be very disturbed with Ap indices up to the 50s. Scottish type aurora could well occur on the 5th and 6th; levels are expected to remain at sub-storm all the week. For the south, ionospheric levels are expected to be affected by the magnetic activity. MUFs during daylight are expected to be around 18MHz, with darkness hours down to around 7MHz. Northern stations are expected to be well down on these levels. It will not be a good week at all.

At present all ground based solar and radio patrol data and synoptic charts are apparently under review. Unless it can be proved that they are indispensable for research purposes and funding can be guaranteed; the USA Air Force, which has maintained these services for many years, is likely to close them down. It is not known whether the 2,800MHz solar flux data will be affected as it is supplied by Penticton Canada, but information concerning all of the other frequencies from microwaves to VHF are likely to be affected.

And that is the end of this week's solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 Uniform Quebec and G7 Sierra Golf series, and Novice calls in the 2 0 Alpha Hotel and 2 1 Charlie Uniform series.

32. GB2RS News 3rd April 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-01 14:49:42 UTC
From: dave@llondel.demon.co.uk
Message-ID: <765236982snx@llondel.demon.co.uk>
Source record: 269047
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc

Good morning. It's Sunday the 3rd of April and here is the GB2RS news broadcast, prepared by the Radio Society of Great Britain.

First the headlines:- Amateur radio is featured on children's TV on Thursday; space station Mir can be heard on two metres, channel S22; and poor propagation is forecast for the coming week.

Amateur radio will be featured this week on the BBC TV series "Why Don't You?". The broadcast, which is scheduled for 9.30am next Thursday the 7th of April, is primarily aimed at young people aged around 9 to 14. The amateur radio feature is approximately six minutes in length and presents the hobby as modern and exciting, and features everything from crystal sets to packet radio. Members and friends of Rishworth School Radio Club, in Yorkshire have been heavily involved in making the programme.

Users of two metre channel S22, 145.550MHz, are reminded that this frequency is used by the amateur radio station on board the Russian space station Mir. There are five orbits each day and the window for contacts with the UK lasts about ten minutes. You may be asked to move from this frequency, or to stand by, for a few minutes to allow these space contacts to take place, and your cooperation would be very much appreciated.

The newly formed group of educationalists, STELAR, which stands for Science and Technology through Educational Links with Amateur Radio, will be running a four day residential course this week. The course is for teachers from schools with no previous amateur radio links. During the course, which is sponsored by Trio-Kenwood UK Ltd, a special event station will be active using the call sign GB2SR. It will be on the air on the evenings of Monday the 4th, to Friday the 8th of April inclusive. Check for SSB on or near the following frequencies, 3.766MHz, 7.048MHz, 14.165MHz, 21.287MHz and 28.428MHz The station will also be active on packet radio, and messages for demonstration purposes would be welcome at GB2SR via GB7MSW on 144.650MHz.

The RSGB's Senior Novice Instructor for Dorset, Phil Mayer, G0KKL has changed his address. He now lives at: 16 Haig Avenue, Canford Cliffs, Poole, Dorset, post code BH13 7AJ. His telephone number is 0202 700903. All enquiries from Dorset Novice Instructors should be sent to G0KKL at that address.

Attention RSGB members in Norfolk: A new RSGB Liaison Officer (RLO) has been appointed for Norfolk. He is Bill Higgins, G3PNR, and his address is 65 Hayden Court, Eleanor Road, Norwich, Norfolk, NR1 2RG. Bill's

telephone number is 0603 629150. RLOs hold a wide range of information and they are available to help any RSGB member seeking advice.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Spratly Islands, a group of East Malaysian and Japanese operators is active using the callsign 9M0A from Layang-Layang Island, from now until Wednesday the 6th of April. Operation is on 160 - 10 metres on CW and SSB.

From St Vincent, DL7FT will sign J87BZ from now until Friday the 8th of April. Check these frequencies: 3.789, 7.075, 14.195, 18.128, 21.290, 24.932 and 28.490MHz

From Trindade Island, PY1UP will sign PY0TUP from now until August on all bands using CW and SSB.

And from Nigeria, DL9GMM will be active as DL9GMM/5N0 from now until December 1994. Activity will be on all bands 10 - 80 metres, on CW using wire antennas.

Rally news now:

We know of the following event(s) for today, Sunday the 3rd of April:

The 8th Launceston Amateur Radio Rally is being held at the Launceston College. Doors open at 10.30am. The event features trade stands and a bring and buy stall. Refreshments and hot snacks will be available and talk-in will be on channel S22.

The 28th White Rose Amateur Radio Society Rally is being held at the Allerton High School, Links Lane, Leeds. The event features the usual trade stands and a bring and buy stall.

Tomorrow, Easter Monday, the 4th of April, the Centre of England Rally and Satellite, Computer and Electronics Show takes place. This is to be held at the Sports Connection Centre, Leamington Road, Ryton which is on the Dunsmore to Coventry road, the A45/A423. Doors open at 10.30am. The event features over 80 trade stands and a bring & buy stall. Refreshments will be available all day and talk-in will be on channel S22.

Next the Rallies for Sunday the 10th of April:

The Leiston Amateur Radio Club Car Boot Sale is to be held at the Solar Car Park, off Sizewell Road, Leiston, Suffolk. Doors open at 10am. This event is a radio-oriented car boot sale. Further details can be obtained from G3MYA who address is correct in the RSGB Call Book.

Also on the 10th, the Lough Erne Amateur Radio Club Mobile Rally is to be held at the Killyhelvin Hotel, Enniskillen, Co Fermanagh. Doors open at 12 noon. The event features trade stands and a bring and buy stall. Talk-in will be on channel S22 by GI0LEC. Further details from GI6JPO,

Tel: 0365 87761.

The third event on the 10th is the Swansea Amateur Radio Society Rally which is to be held at the Swansea Leisure Centre, situated on the Swansea/Mumbles coast road, the A4067. Doors open at 10.30am. The event features trade stands, repeater group stands, operational HF and VHF multi mode stations and a bring and buy stall. Refreshments will be available. Talk-in by GB2SWR is on channel S22. For further details contact Roger, GW4HSH on 0792 404422.

Now a date for your diary:

The RSGB National Mobile Rally is to be held at its usual venue on Sunday the 7th August at Woburn Park, Bedfordshire. For further information contact Norman Miller, G3MVV on 0277 225563.

HF contest news now:

The SP DX SSB Contest is taking place this weekend and will finish at 1500 UTC today, Sunday the 3rd, after 24 hours. Bands are 1.8 to 28MHz, excluding the WARC bands.

The Holyland Contest is also active this weekend and is scheduled to finish at 1800 UTC today, Sunday the 3rd. Entrants may use CW or SSB and the contest covers 1.8 to 28MHz, excluding the WARC bands. The HF News column in the March edition of Radio Communication carries further details of both of these events.

The first in this years series of RSGB QRS (Slow Morse) Cumulative Contests will take place next Tuesday the 5th of April from 1900 to 2030 UTC between 3.540 - 3.580MHz. See April RadCom page 8, for further details and January's RadCom, page 83 for the rules.

The RSGB RoPoCo-1 Contest will take place next Sunday the 10th of April from 0700 to 0900 UTC between 3.520 - 3.570MHz, CW only. The contest exchange is rather complicated so participants are advised to consult the rules which can be found on page 93 of the March RadCom.

Next some VHF contest news:

The next RSGB contest is the 1.3 and 2.3GHz Fixed Station and Listeners Contest which takes place next Sunday the 10th of April from 1700 to 2100 UTC. See February RadCom, page 83 for further details.

Now a progress report on the South Yorkshire VHF repeater, GB3NA, which is currently off the air. Before the repeater can return to service, a number of matters need to be resolved. To this end, the RSGB is meeting with the Radiocommunications Agency in the very near future. Further information can be obtained from the RSGB Zone A Council Member Peter Sheppard, G4EJP whose address is correct in the current RSGB Call Book.

The Blandford 70 centimetre repeater GB3DT, became operational again on Saturday the 12th of March after being out of service since last August during essential repair and renovation work on the antenna tower. The repeater is located at Blandford Camp in Dorset and operates on channel

RB0, which has its output on 433.000MHz and input on 434.600MHz. Further details and/or reports should go to the repeater keeper G8BXQ, whose address is correct in the RSGB Call Book.

The Hornsea 70cm Repeater, GB3HA, area on channel RB6 is temporary off the air. For further details contact the repeater keeper Richard, G4YTV, whose address is correct in the RSGB Call Book.

The 2 metre Repeater, GB3TP, covering the Keighley, West Yorkshire area, on channel R5 is now non operational due to a fault. For further details contact the repeater keeper G3RXH, whose address is correct in the RSGB Call Book.

The RSGB makes the GB2RS Main News available on a premium rate telephone line for anyone unable to listen to the news in any other way. The number is 0336 707394. From last Friday, the cost of calls went up to 39 pence per minute at cheap rate and 49 pence at all other times. Full details of the GB2RS transmission schedule can be found in the latest edition of the RSGB Call Book.

And now the solar factual data

The period from the 21st to the 27th of March, has seen only a very slow recovery with solar activity very low in most parameters. No flares have been reported, but magnetic activity, though considerably reduced, is still very unsettled. The only event of note during the period is the continuation of the stratospheric warming which now covers central and southern Europe extending to the pole at levels above 10 hecto pascals, about 30 kilometres. Sunspot indices have meaned about the 41s, not varying much day to day. The solar flux has also been almost steady and averaged 90 units. The 90 day mean flux on the 25th was 105 units.

The geomagnetic activity levels have declined but the passage of coronal holes is still keeping geomagnetic levels very unsettled, the Ap indices were up to sub-storm levels of 27 units on the 21st, but had declined to just unsettled levels of 12 units by the 27th, giving an average of 17 units for the period. The state has been 'Strat Warm' throughout the period with otherwise nothing to report. We have now caught up with the aa indices, so here are details for the 8th to the 14th of March. Due to the passage of coronal holes, levels on the 8th to 12th were up to 'storm', with periods up to 115 nanoTeslas, K6. The daily averages for the period were 60.2 nanoTeslas, about K4. The period from the 15th to the 21st has seen the magnetic disturbances decline from a daily level of 60.9 nanoTeslas on the 15th, to 23.2 nanoTeslas by the 20th. The weekly average was 40.4 nanoTeslas, about K4 'just unsettled'. The X-Ray flux levels are slowly recovering and rose from A5.4 on the 21st up to B1.0 by the 25th. They declined again to A6.7 units by the 27th, giving an average of A8.3 units for the period.

I'll repeat the figures. Spots - 41; Flux - 90; Ap index - 17; X-ray flux - A8.3.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon, averaged 7.9MHz, with the darkness hour lows averaging 3.3MHz. The 24th was a good day with levels up to 9.4MHz, otherwise there was little variation from day to day.

I'll repeat the figures. Highs - 7.9MHz; lows - 3.3MHz.

Now the ionospheric data for the north:

The F2 daytime critical frequencies at Ekaterinberg averaged 6.3MHz and the darkness hour lows 2.4MHz.

I'll repeat the figures: Highs - 6.3MHz; lows - 2.4MHz.

And next the solar forecast:

This week, the active side of the sun will be rotating away. Solar flux levels are expected to be the 95s. Geomagnetic levels are expected to be very disturbed with Ap indices up to the 50s. Scottish type aurora could well occur on the 5th and 6th; levels are expected to remain at sub-storm all the week. For the south, ionospheric levels are expected to be affected by the magnetic activity. MUFs during daylight are expected to be around 18MHz, with darkness hours down to around 7MHz. Northern stations are expected to be well down on these levels. It will not be a good week at all.

At present all ground based solar and radio patrol data and synoptic charts are apparently under review. Unless it can be proved that they are indispensable for research purposes and funding can be guaranteed; the USA Air Force, which has maintained these services for many years, is likely to close them down. It is not known whether the 2,800MHz solar flux data will be affected as it is supplied by Penticton Canada, but information concerning all of the other frequencies from microwaves to VHF are likely to be affected.

And that is the end of this week's solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 Uniform Quebec and G7 Sierra Golf series, and Novice calls in the 2 0 Alpha Hotel and 2 1 Charlie Uniform series.

>ELECTRICITY, LEUKEMIA STUDIED:
> A new report finds an "association" between exposure to
>magnetic fields and leukemia. The study, in next month's American
>Journal of Epidemiology, looked at records of more than 223,000
>electric utility workers. It found a "statistically significant"
>association, but no cause-and-effect relationship, between
>exposure to magnetic fields and acute nonlymphocytic leukemia.

In the Atlanta Journal, the story said that they found an excess of nonlymphocytic leukemia of 1 in 200,000. IE 7 cases instead of the expected 6 in the sample. Now I'm not a mathematician, but I'm not convinced that's a statistically significant change. I thought that probabilities on the same order as the sample size were considered meaningless.

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* LUNAR EXPLORATION CONFERENCE SCHEDULED *
==========
International Space Enterprises (ISE), a U.S. corporation planning a series of privately-financed missions to the Moon, has been selected to co-host an International Lunar Exploration Conference and Apollo commemorative event in San Diego. The conference is tentatively scheduled for 13-16 November 1994, which coincides with the 25th anniversary of America's second piloted mission to the Moon, Apollo 12. In addition to bringing together lunar scientists from all over the world, the event will kick off a nationwide educational initiative, whose ultimate goal is to fly a student experiment to the Moon by December 1997, the 25th anniversary of Apollo 17, the final Apollo mission to the Moon.

The November event will be co-sponsored by the National Space Society and the Spaceweek International Association, non-profit organizations dedicated to the expansion of human activities in space. The San Diego chapter of the National Space Society will work with ISE to develop the technical program for the conference, which will feature presentations and workshops on a variety of topics relating to exploration and utilization of the Moon. Spaceweek will manage the Apollo 12 commemorative event, planned as a gala fund-raising banquet on the evening of 15 November. Proceeds from the conference and banquet will be used for development and flight of the student experiment, which will be selected through a nationwide competition held during the 1995-96 academic year.

The specific site for the November conference will be selected within the next few weeks, and a preliminary conference program will be released in June. Details of the nationwide student experiment contest - which will be designed to involve students at all academic levels in the 1997 lunar mission - will be announced as they become available and a draft contest guidelines document will be presented at the November event. For additional information please contact Tom Kessler of ISE at (619) 637-5772.

[Info via Franklin Antonio]

* UFO ON 2-METERS *
==========
G3IOR reported an unidentified satellite sending telemetry on 145.592 MHz. It was first heard by G3JQI in England at 18:50 UTC "dopplering" down until a 18:55 UTC LOS on 16-Mar-94.

Keep an ear out for this spacecraft, and send reception reports to SpaceNews.

* OSCAR-11 NEWS *
==========
G3RWL reports that UoSAT-OSCAR-11 is about to re-commence its regular news bulletin transmissions. The news bulletins are transmitted in ASCII on a frequency of 145.826 MHz FM AFSK at 1200 bps.

* SpaceNews AVAILABILITY *
==========
SpaceNews archives are now available via anonymous FTP at pilot.njin.net! Files may be found under the /pub/SpaceNews directory. All issues from 1993 have been zipped together in one file, while 1994 issues are available separately in ASCII form. The IP address for pilot.njin.net is 128.6.7.38, and answers to frequently asked questions, satellite software, and space related GIF images will be added in the not-too-distant future.

The latest issue of SpaceNews has been available to those with Internet access for some time by using the Unix "finger" command as follows:

finger magliaco@pilot.njin.net

Those without "finger" capabilities can receive SpaceNews via e-mail by sending a blank message to jfesler@netcom.com with a subject of #finger magliaco@pilot.njin.net.

SpaceNews is also available on Usenet under the newsgroups of rec.radio.amateur.space and sci.space.news, thanks to the folks at the University of California at San Diego. It is also available on the Amateur Packet Radio Network, and several of the "Pacsat" satellites, thanks to Pacsat ground stations who upload the issues to the birds each week.

SpaceNews has also been known to appear on the packet radio personal message system operated by the Cosmonauts on the Russian space station Mir. :-)

* SpaceNews BBS *
==========
A "SpaceNews" packet radio BBS has been established by Mario, KD6ILO in Tacoma, Washington. Mario reports the BBS carries SpaceNews, AMSAT, and NASA information, and serves the Puget Sound area on a frequency of 144.910 MHz. The BBS is also linked to the UoSAT-OSCAR-22 satellite through the N7RSN SatGate also located in Tacoma, WA.

* FO-20 SCHEDULE *
==========
The FO-20 command station announced that FO-20 will be placed in Mode JA

(Analog transponder mode) during Field Day 1994 (25-Jun-94 18:00 UTC through 26-Jun-94 18:00 UTC).

The current operating schedule is as follows:

Analog mode:
06-Apr-94 06:45 -to- 13-Apr-94 07:10 UTC
20-Apr-94 07:35 -to- 27-Apr-94 07:55 UTC
11-May-94 06:54 -to- 18-May-94 07:20 UTC

Digital mode:
Unless otherwise noted above.

[Info via Kazu Sakamoto, JJ1WTK]

* THANKS! *
==========
Thanks to all those who sent messages of appreciation to SpaceNews, especially:

GM1SXX KA1CNK ON1EN KD6EFQ KD6ILO N8QPO

and First Lt. Walter Witt, N8DKI, of the USAF Auxillary Civil Air Patrol who uses SpaceNews in teaching aerospace science to cadets between the ages of 13 and 21.

* FEEDBACK/INPUT WELCOMED *

Icom IC-735 has them, IC-725 doesn't.

> Electronics, CQ, 73, and on some occasions QST.
>
> Those days are gone. I counted no less than 12 different Wrestling
> mags, 6 music magazines, 5 bridal mags, 6 off road mags, 3 hot rod mags,
> 4 different bathing suit mags (sim to sports illustrated swimsuit)

Uh, I must live in heaven then. Most of the local stores
(Omni (grocery store), Osco drug, even K-mart) have at least *some* of
those titles. I've not seen QST or Elementary Electronics, but Omni
regularly has CQ, 73, Popular Electronics and Electronics Now (I think
it used to be Radio Electronics).
The catch is, they only have about 5 or 10 copies of them.
When these sell out, they're out till next month. Perhaps you picked
a bad day - keep looking.

38. Re: Voice mail on a repeater?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-01 15:22:41 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1994Apr1.152241.7692@ke4zv.atl.ga.us>
Source record: 268980

In article <2nf2sm$rt6@cosmos.nectech.com> rbono@cosmos.nectech.com (Richard J. Bono) writes:
> Beeps breed bad habits!

No, they just don't *cure* bad habits. People can react the same way to a squelch crash as to a beep. I've experienced one beep system that *does* tend to cure bad habits, but I found it too obnoxious to implement. It uses twin beeps. If you key after the first beep, you get 10 seconds before repeater time out. If you wait for the second beep, you get the normal 3 minutes. The gap is for breaking stations to insert their callsigns. Getting everyone to patiently wait their turn in a conversation is a lost cause when you have 5 or 10 people all wanting to get their two cents in a hot discussion. It's the cocktail party, or beer and pizza, syndrome except that when several people try to talk through the repeater at once, you can't understand everyone. Even so, the tailgating and doubling are preferable to a stuffy ordered roundtable.

Ideally, we'd all have duplex radios so we could do CSMA. For now, the best we can do is try to avoid being long winded since we may wind up having to repeat everything after we unkey and realize we were doubling for the whole 2 minutes. :-(

Gary

The Kenwood TS-850 has transverter connections. I don't have my manual with me here at work,
but I will be glad to give you any specific information if you need it.

Jeff, KC1MK

40. Packet question

Newsgroup: rec.radio.amateur.misc

From: robbo@hprpcd.rose.hp.com
Message-ID: <2nhnhh$rue@hpchase.rose.hp.com>
Source record: 269051

Hi!
I was looking around my local packet BBS the other day
and 'escaped' to DOS. After reading all the help information I found
I a feature that allows binary file transfer.
However, the binary upload/download operation needs a program
or protocol called AUTOBIN. I left a message for the sysop and packet
BBS owner, but he had never heard of it. He said he just unpacked
the software and let it run.
SO does anyone know about the program/protocol you need to make binary
transfer possible over packet?
What is AUTOBIN?
Where can it be obtained from?
73
Dave

```
--- SOLAR TERRESTRIAL FORECAST AND REVIEW ---
April 01 to April 10, 1994

Report Released by Solar Terrestrial Dispatch
P.O. Box 357, Stirling, Alberta, Canada
T0K 2E0
Accessible BBS System: (403) 756-3008

---------

Adjusted SKYCOM Version 1.0 Prices
Ionospheric Signal Analyst

For all orders post-marked on or after 01 April 1994, the SKYCOM
High-Frequency Ionospheric Signal Analyst software package is priced at
$179.00 without a printed manual, or $200.00 with a printed manual
(shipping and handling charges are included in these prices). Those
who are registered with the STD may purchase the software at $139.00
without a printed manual, or $167.00 with a printed manual. All prices
are in Canadian or U.S. funds (personal checks accepted).

For more information, contact "Oler@Rho.Uleth.CA", or
"COler@Solar.Stanford.Edu". Pricing information can be obtained from the
e-mail address above, by writing to us through postal mail, or by calling
the recorded message at: 403-756-2386 (to be updated shortly - approx. 3
minutes). THE SPECIAL LIMITED-TIME INTRODUCTORY OFFER HAS EXPIRED.

Chart Start Date: Day #031
```

NOTES:
This graph is determined by plotting the greater of either the planetary
A-index or the Boulder A-index. Graph lines are labelled according
to the severity of the activity which occurred on each day. The left-
hand column represents the associated A-Index for that day.
Q = Quiet, U = Unsettled, A = Active, M = Minor Storm,
J = Major Storm, and S = Severe Storm.

CUMULATIVE GRAPHICAL CHART OF THE 10.7 CM SOLAR RADIO FLUX

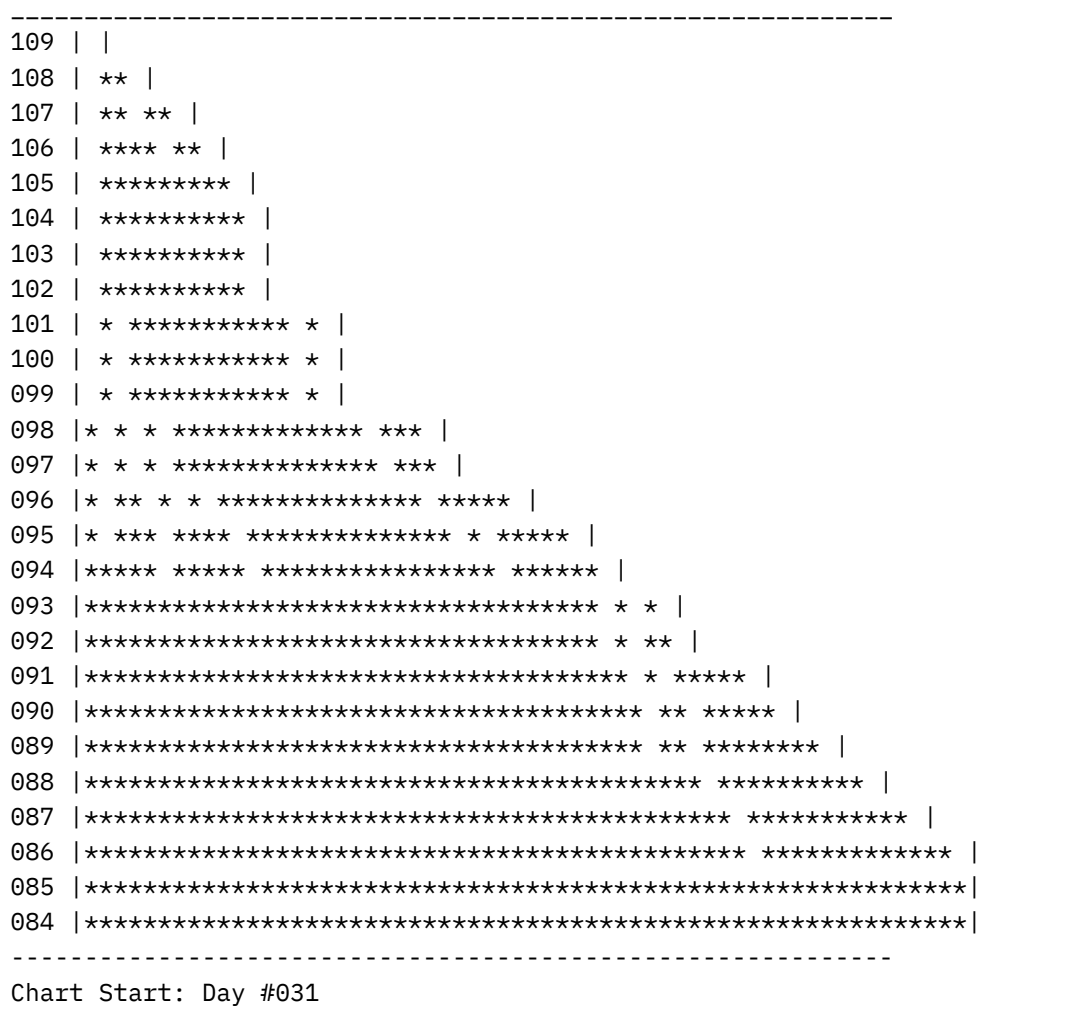

Chart Start: Day #031

GRAPHICAL ANALYSIS OF 90-DAY AVERAGE SOLAR FLUX

```
101 |************************************************************|
----------------------------------------------------------------
Chart Start: Day #031
```

NOTES:
The 10.7 cm solar radio flux is plotted from data reported by the Penticton Radio Observatory (formerly the ARO from Ottawa). High solar flux levels denote higher levels of activity and a greater number of sunspot groups on the Sun. The 90-day mean solar flux graph is charted from the 90-day mean of the 10.7 cm solar radio flux.

MiniSport Laptop Hacker - Vol #21. April 1994
To discourage pecuniary interests, Copyright (c) 1994 Brian Mork

>>> ADMIN
The MLHacker series is formatted to print out on 8.5"x11" sheets manually fed into an Epson LQ-850. I print at 8 lpi, which gives 82 lines per page. My goal is to make each MLHacker one to two pages, to fit front and back on one page. Back issues are available via Internet e-mail and ftp archives and direct from my data line listed below. File download privilege is given on the first call. Use the F)ile option and L)og into the \public\computer directory. No cost 'cause I just like doing it. Do something you're interested in for free and pass it on!

The Air Force has me committed to some massive amounts of overseas flights during April and May. For this reason, I expect MLHacker will take a hiatus during that time.

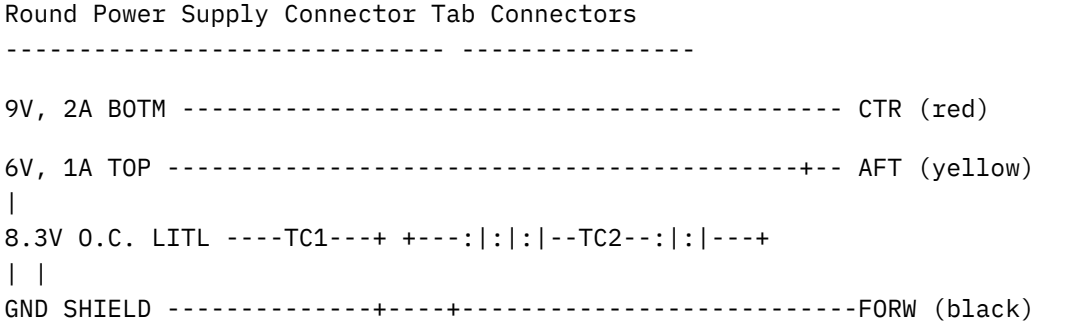
>>> AUTOMOBILE POWER SUPPLY
Something has been bothering me ever since issue #12 of MLHacker. I mentioned how you could tap into your car cigarette lighter, step the voltage down to 9 volts and use that to power your Minisport. So far, true. My bad recommendation was the placement of a noise-killing capacitor and inductor.

Yes, put a big inductor in series (old lamp ballast works fine) to kill ignition glitches. But don't put the capacitor on the car side of the inductor. Put it on the *computer* side of the inductor. The problem is this: When you switch off the computer, the magnetic field sustained by the inductor collapses, forcing continued current flow. But the computer is off! Being off is a high resistance. As the charge collects on this high resistance, the voltage peaks very high. To some extent, the internal Minisport battery, which is effectively in parallel across the power line, begins to conduct (i.e. charge up) as the voltage rises, so there is some limit on the voltage. But I was wrong to suggest putting the capacitor where the inductor could feed off from it. It's much better to put it on the computer side, where it will dampen the inbound current. An additional improvement would be to put a diode across the inductor (cathode, banded end toward the car). It will then short out the inductor spike upon power-down.

Some folks have indicated they run the Minisport straight from 12 volts. I'm not sure I'd recommend that, but I'd be interested in anybody's success doing this. Battery? Direct from car? One MLH reader is working to modify a drill battery pack to power his Minisport. I hope to talk him into writing up notes on the project.

>>> INSIDE THE BATTERY PACK
Jim sent me a dead battery pack to rip apart. Aha! The final link to the puzzle. MLH #12 discusses the wall adapter/battery pack connection. MLH #14 discusses the battery pack/computer connection. Issues #17 and #18 discuss the switching power supply board inside the Minisport. Finally, here's the stuff from inside the battery pack. In the process of documenting this, I discovered another error from issue #12--my description of the small pin on the 3-pin charging connector. I believe the information provided here to be the correct interpretation.

BATTERY PACK INTERNALS



There is also a tiny chip capacitor between the 9V supply rail and ground. A parallel surface mount spot (for a resistor?) is empty on the circuit board inside the one battery pack I've inspected.

The charger adapter has four connections: the shield, two similar pins, and a third pin smaller than the other two, thus the titles BOTM, TOP, and LITL. The tab connections on the bottom of the battery pack correspond to the three slide connectors visible inside the minisport when you remove the battery pack. The colors correspond to the wiring color visible inside the computer when the bottom is removed.

TC1 is a thermal cutoff unit, tightly mounted to the battery cell closest to ground. TC2 appears physically similar. While charging this battery pack, I monitored the voltages on the power supply connector. BOTM was 9.2V, TOP was 7.6V, and LITL was zero volts. I applied a heat gun onto TC1, and at 0:12 the voltage at LITL jumped up to 8.3 volts. At 0:40, TC1 closed and the voltage at LITL went back to 0 volts.

It seems clear that the design of this system is to overvoltage the batteries (7.2v onto a 5x1.2 => 6.0v battery pack) and when the batteries get warm, the thermal cutoff ungrounds a signal back to the charging unit. To confirm that the charger responds to the signal, I loaded the battery pack with a 20 ohm resistor and hooked up the charger, giving 7.2 volts across the resistor (about 350 mA drain, 2.5 watts). I would expect that if the charger shut off, the voltage would drop a little bit as the battery pack picked up the entire load and started discharging. Sure enough, after about 20 seconds of heating TC1, the voltage across the resistor dropped to 6.8 volts.

Heating TC2 has expected results. While charging, I measured 7.0 volts across an unloaded, charging battery. At 0:20 of heating, an audible

click occurred and the voltage dropped to 2.9 volts. I turned off the heat gun and at 1:14, I heard another click and the voltage comes back up. While *not* charging, the voltage goes from 6.5 to 0.0 with nearly identical timing. I think the 2.9 volts observed while charging was residual output from the charging unit.

>>> BAYCOM VS POOR MAN'S PACKET
Poor Man's Packet software works fine to receive packets on the Minisport using the hardware described back in MLHacker #9. It does not work on transmit. If you try to send a packet, the transmit tones just lock up at 1200 Hz or 2200 Hz. This was confirmed using another ham's (thanks Ron) PMP hardware rigged to run off COM1 (normal DB-9 out the back). PMP is written in C, including the AX.25 bit packing routines. I think these are just not fast enough when run on the 8 MHz Minisport.

Baycom uses a separately loaded driver to talk to the hardware. It's small and efficient, probably written in assembly. I got a copy of Baycom software and using Ron's Baycom hardware, which was rigged to operate on a parallel port, everything worked fine.

Conclusion? The Minisport needs bit packing routines written in assembly. Baycom offers this; PMP does not. I thought the PMP hardware was designed to be bit compatible with Baycom (e.g. RTS does the PTT function, and so on). Apparently, this is not so. When I redirect the Baycom to COM2, it does not work with the PMP hardware I built and described in MLHacker #9.

I don't have the time right now to do an assembly rewrite of the PMP software, so I want to figure out how to use the Baycom software. Anybody out there more familiar with Baycom and what bit lines it uses for what? Eventually I'll poke around and find out what's going on, but maybe somebody could save me the trouble.

>>> FUTURE PROJECTS
I saved up money for several months and purchased a Fluke 97 digital storage scope / DMM "do everything" box. It's roll mode data monitor worked great for probing the battery pack. Expensive, but a *superior* bench top accessory. I'm interested in anybody using one of these. Mine has an optical data interface and that will, I'm sure, eventually be hooked to my Minisport.

I also picked up a 670 nm laser diode assembly, including a photodetector and stepper motor. The light beam comes up through the shaft of the stepper motor, allowing the outbound beam to be aimed onto one of eight mirrored segments, and reflected forward. Inbound light is collected by all eight segments simultaneously and focused onto the on-axis photodetector. I wonder if I can hook this up to the computer to do a laser light show. Or maybe a proof of concept optical radar. Hmm... :-)

44. Super-conducting antenna (LONG)

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-01 19:24:40 UTC
From: slay@netcom.com
Message-ID: <slayCnLHx4.4Cx@netcom.com>
Source record: 269055

I recently received a letter from an old friend, Joe Speroni AH0A/7J1AAA, who has been living and working in Japan for many years. He is also the author of the well-known MORSE ACADEMY software for teaching Morse Code. Anyway, it was such an exciting letter that I thought it would be of interest to others here on "the Net".

Dear Sandy:

I had promised a series of articles on Japanese amateur radio, but there is something so exciting I just have to take a break and tell you about it.

It all started with the work that Ed Coan (AH6MI/7J1AAE) did on antenna pattern plotting using his personal computer. The circular, and even backward antenna patterns of some of our local TIARA club embers brought home the point that what a good station needs is a good antenna. Ed's antenna looks great and the results verify it. He works regular schedules into Colorado and Maine, just like sunspots don't mean anything. My mini-beam just could not compare.

Well, I got to thinking about what we apartment dwellers could do and realized that space is THE problem. How do you fit a full-sized beam on a balcony? Loading coils are the answer and the problem at the same time -- the antenna radiation resistance drops as reactance is substituted for length. High current loops develop and the power is dissipated in the antenna instead of being radiated. If only the antenna didn't dissipate the power. Hmmmmmm....let's see, P=E*E*R; if R were 0 then......

From my work, I have some contacts in research groups over at Tokyo University. Better yet, I knew a Japanese ham who is a graduate student there. The thought running through my head was to build a super-conducting antenna. This requires cryogenics, i.e. temperatures around minus 279 degrees Centigrade. I was able get the university folks interested in the project and we built a 10 meter dipole test silicon wafer. They put together a lot of serial coils on the wafer and by "re-work" on the wafer, they were able to connect them so we had a super-conducting dipole. I took my TS-940 transceiver down to the lab for the first tests, but before we could test it, actual measurements showed it was resonant on 3126 KHz. It seems that the normal equations for inductance don't work with super-conducting materials -- you need a lot few turns to get the same results than at normal temperatures. Many measurements and trials later, we had a ten meter resonant wafer. This time we put a pair of 40 element beams on each wafer and stacked 4 wafers in the same assembly. That made a 320 element array on 10 meters in

less than a half-foot (15 cm) cube.

The first test didn't go too well. I connected the TS-930 to the super-conducting wafer antenna and tuned it for 10 meters. At room temperature, we couldn't hear anything. Using a heat pump, the lab technicians started lowering the antenna's temperature toward the super-conducting region. I was really impressed by how small the equipment is, and started thinking it might all fit in the shack. Just then, the TS-930 froze solid, which had a negative effect on its operating characteristics. This wouldn't be so easy after all, the coax connection would need some study!

We reworked the wafers to put inductive coupling on them, but I could find no way to efficiently couple to it from the conducting ceramic material that passed RF but not heat. Probably, something that Kyocera invented just for this use. I sent the TS-940 to the ham shop in Akihabara and asked them to touch it up for me. Suzuki-san (service manager at the ham shop) asked exactly how the paint had been peeled off around the coax connector -- lightning maybe? No, I assured him -- just low temperature exposure, without saying how low the temperatures were. The project had to stay secret and besides, Suzuki-san can repair anything!

Since it looked like it might be a while before the TS-930 would be repaired, I brought out my TS-940. I had already placed an order for the Yaesu FT-1000 anyway. After verifying that in the super-conducting range the antenna was resonant on 10 meters, we connected the TS-940. The ceramic material worked and the rig operated well even as we began the cooling cycle. The band seemed dead even with the antenna at -150 degrees C. It took another 10 minutes to get to the super-conducting range -- then the TS-940 blew up. It seems our antenna had a bit more gain than the TS-940 front-end could take. Later, with 100 dB of attenuation, measurements showed 5 volts coming out of the coax. A little hard to believe, but then what do I know about cryogenic LSI antenna technology?!

The TS-940 was also returned to Suzuki-san, but this time he frowned a bit -- the front-end board did look like it had been hit by lightning. Not to worry, Suzuki-san can repair anything!

The FT-1000 arrived just in time to be able to continue the experiments. We built a QSK attenuator to protect the receiver and with the LSI wafer antenna still inside the lab, decided to try to make a contact on 10 meters. Boy, what a shock when we got it working. The first thing we heard was a couple of W2's talking locally on 10 meters and that was with 80 dB of attenuation. We had the antenna array on a rotatable mount; I moved it about 1 degree and the W2's disappeared.
What beam width! We tuned them in again, and they were just about to sign off, so we thought we would try to work them. The rig was tuned up at 50 watts on a dummy load; we switched in the wafer antenna and gave N2BA a call. The noise was unbelievable -- an ionized ray shot out from the antenna and hit the wall of the building. Before we knocked

a hole in the band, we took out a piece of the lab wall! Ever wonder what an antenna pattern looks like in three dimensions? There was a small round hole in the wall of the lab -- about 1 cm in circumference. We cut power quickly. N2BA came back on frequency a few minutes later and said he was using his back-up rig; something had taken his main rig off the air. For some reason, the station he was talking to never came back, and so we decided not to transmit again until we knew for sure what was going on.

As near as we can tell, the antenna array has 120 dB gain over a dipole, but with a beamwidth of 0.75 degrees using the 60 dB points. With 50 watts output, the effective radiated power is 55 quadrillion watts at the center of the beam (5.5 with 13 zeroes). As soon as the University realized what we had built, the entire project was taken away from us and turned over to the Japanese Self-Defense Forces. Amateur radio "tinkering" has contribute to something, but I am not exactly sure what. I haven't the slightest idea what was in those wafers or how to explain how to build another set. But what I'd give to use a smaller set in the next CQ World Wide Contest! Do you think someone may be interested in this idea for Star Wars/SDI??

A few months later, the University contacted all of us and asked just how close we had been to the antenna when operating. As best as I can figure, we were in the null behind the array. From what has been said so far, it looks like a secondary use for our antenna may be as a mass sterilizer, but confirmation will have to await the results of the medical tests. If our antenna ever hits the market, it looks like remote operation would be desirable.

As I am writing this, I have been informed that Suzuki-san can't fix everything after all. He's written off the 930 and 940, and I just found out that before the university terminated the project, they tried one more time with my FT-1000, but without the 100 dB attenuator to protect the receiver. It's front-end now matches the 940's and it looks like it will be awhile before I am on the air again. Maybe Yaesu will announce some new models soon.

Here is a long list of "interesting" callsigns we worked in the 1994
ARRL DX contests (both CW and SSB).

I am looking for any known QSL managers. If you know the manager for
one or more stations on this list, I would appeciate it. I will be
posting a followup message with the results.

Thanks & 73 - Jim AD1C

I find the hams-on-Usenet lists extremely *useful* and am glad they are posted here with regularity. The charter of rec.radio.info suggests that material posted to rec.radio.info should also be posted to another one of the rec.radio groups so limiting it to rec.radio.info would raise opposition. Whether or not this is a reasonable charter is the topic of a different discussion.

I write mostly because the danger is that the Mark Salyzyn, VE6MGS, will read the original message and just decide that the work of maintaining the list isn't being appreciated and will decide to spend his time on something more rewarding.

I can think of perhaps a half dozen large messages that are posted regularly. Many of them I find of significantly less utility than this one.

50. Callsign CD-ROM recommendations, please

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-01 21:11:12 UTC
From: Ned Raybould <eraybould@delphi.com>
Message-ID: <BS7vhzg.eraybould@delphi.com>
Source record: 269062

Hello everyone and thanks for reading.

I recently bought a new 486DX computer and I'm planning to add a CD-ROM drive in the next two or three months.

My question, however, concerns the callsign databases available on CD-ROM. I am aware of the existence of the Buckmaster disc and the QRZ disc. The features I want are the ability to look up domestic and foreign calls, search by name, callsign, zip, city, etc., and filter on certain fields for certain information. I have telnetted to pc.usl.edu 2000 and I like the features I see there, but I have to pay (indirectly through my Delphi account) when I access it. Please let me know if there are other callsign CD-ROMs out there, and please give me your recommendations (based on my needs stated above). If you have company/publisher contact info, I would appreciate it also. I live in Dayton and want to purchase a CD-ROM or two up at the Hamvention seeing that many vendors make the trip and offer discounts.

If you want to give me any advice on CD-ROM drives, that would also be appreciated. I'm looking for at least a double-speed, but preferably a triple-speed. It must be MPC2 compliant, CD-DA capable, multi-session PhotoCD capable, and other good stuff.

Thanks and 73's.

Ned, N8OIF

P.S. Please e-mail me direct (Delphi, preferably), even if you post. THX.

Another on-line server is at pc.usl.edu 2000. Type help once you are in. You can search by name, call, zip, city, and I think a couple of other fields. You can also filter your searches. I used it to quickly find all hams in my city. Give it a try, and good luck.

52. 6 meter band activity?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-01 21:23:57 UTC
From: mtrail@violet.berkeley.edu
Message-ID: <2ni3dd$rab@agate.berkeley.edu>
Source record: 269064

Hi, all!
After reading last month's QST article on the 6 meter band, I'm
curious as to people's experiences with the band, particularly here in the
Bay area. I've listened to a few FM repeater outputs, but haven't found a
lot of activity. How do people like/find the band?
Also, how possible is sporadic-e propagation on 6 meter FM?

Thanks,
Matt Trail KN6CR

I'm still working on that too, but the sm.doc file does refer to running Supermorse under Windows. I believe it does list a few pointers, specifically the timing (loop versus time). I think you need to use loop. This is under the setup pull-down menu. Give it a try, and let me know if it works. Please refer to the .doc file, because I am not in front of my home computer, and my work computer does not have Supermorse installed. I don't want to steer you wrong.

: or Rod Irving Electronics (sorry don't have a contact number for them).

: Good luck in your search

: Dean

I used XR2206 and XR2211 for RTTY modulator and demodulator
application.
I also used MC14046B for the modulator part(XR2206), too.
You may use MC14046B or 4046B for that function generator
purpose

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 1/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 1 APRIL AND FORECAST UP TO 4 APRIL

IPS Warning 10 was issued on 31 MAR and is current for 3-14 APR.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 082/023

1B. SOLAR FORECAST
02 April 03 April 04 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 080/020

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 31 March
Learmonth 06 2112 2222
Fredericksburg 05 05
Planetary 05 05

Observed Kp for 31 March: 2212 2221

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
02 Apr 10 Quiet to unsettled.
03 Apr 20 Unsettled to active.
04 Apr 45 Active to minor storm.

2C. MAGNETIC COMMENT
Coronal hole induced geomagnetic field activity is expected to start
on 3 April, active to minor storm levels are expected.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Apr normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
02 Apr normal normal fair
03 Apr normal fair poor
04 Apr poor poor poor
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were 15% depressed prior to 06UT, then near predicted
monthly values. Spread F occurred 15-18UT.

Observed T index for 01 April: 24

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
02 Apr 30 About 10% below predicted monthly values.
03 Apr 10 About 20% below predicted monthly values.
04 Apr 10 About 20% below predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Critical frequencies are expected to be depressed by upto 20-30% from
the 3 April due to coronal hole activity.

To all radio amateurs

SB DX ARL ARLD018
ARLD018 DX news

The items in this week's bulletin are courtesy of Bob, W5KNE, QRZ
DX, Chod, VP2ML, The DX Bulletin, Bob, WB2DIN, James, K6OZL, the
Yankee Clipper Contest Club PacketCluster network, and Contest
Corral in QST. Thanks.

YEMEN. Achmed, ex HZ1FM, has activated club station 7O1AA. The
return of 7O1AA to the airwaves was on March 30. Equipment left by
Paul, F6EXV, is being refurbished and expected to be on-line soon.
Schedules for QSOs with stateside stations have been set up. On
Friday try 14243 kHz at 1500z with OE6EEG as net control. On
Saturday try the same frequency at 1600z, again with OE6EEG. Plans
are to move to the 14226.5 Family Hour Net shortly thereafter. QSL
via Box 485, Aden, Yemen.

MACAO. XX9AS, OH6DO, OH2KNB and OH2BH have an Easter Holiday gift
for you. They will be putting XX9TZ on the air from the Hyatt
Regency on Taipa Island from Friday, April 1 through Monday the 4th.
Though this will be an all band effort, pay particular attention to
25 kHz up on 40, 20, 15 and 10 meters for CW, and 7065, 14195, 21295
and 28495 kHz for SSB.

FRANZ JOSEF LAND. R1FJC has been on the air recently. This could
be the first of a new series of call signs for the island.

JUAN DE NOVA ISLAND. Listen for FR5ZQ/J to be active through the end of
April. Check 14247 kHz between 1700 and 1900z, and 14256 kHz from
0200 through 0400. QSL via CBA.
```

EUROPA ISLAND. FR5ZU/E is on the air and plans operations to last for four or five weeks. Try the same frequencies and times listed for Juan de Nova above. QSL via CBA.

BANGLADESH. UA4RZ plans to be signing S21ZL soon.

BANABA ISLAND. Listen for T33CS and T33KK throughout this weekend. QSL via G4WFZ and SM7PKK respectively.

TRINDADE ISLAND. PY1UP will be on as PY0TUP from April through August. QSL his home call sign.

NIGERIA. Rudi, DL9GMM/5N0, will be on until year end from Lagos, mostly with CW at 100 watts. Try 3513 kHz at 2300z, 10104 at 2350 and 14014 at 2115. QSL via home call sign after his return to Germany.

THIS WEEKEND ON THE RADIO. The Holyland DX Contest, sponsored by the Israel ARC, is a 24 hour event that starts at 1800z April 2. Exchange signal report and serial number beginning with 001. Israeli stations will send their area instead of a serial number.

The SP DX CW Contest runs from 1500z April 2 through 2300z April 3 on 160, 80, 40, 20, 15 and 10 meters. Non SP stations send a six digit serial number consisting of RST and serial number starting with 001. Polish stations will send RST and a two letter province designator.

For more details on these operating events, check page 119 of March QST.

>propagated?

I'll say!

The latest thing around here, and I hope it is not becoming
accepted practice nationwide, is to key up and say "Here is" or
"This is" then quit transmitting to wait a second for
the <beep>, then continue transmitting your callsign
to check into a controlled net.

Not only is this a waste of net time, it just sounds stupid.

I can anticipate that someone will rationalize that this
pause allows one to discern if he is doubling with another
station trying to check in, a la W3HXF. It don't work!

In fact, it is even worse than simply transmitting your
callsign and shutting up because callsigns have variable
length, "this is" takes almost exactly the same time
to speak regardless of the speaker. So much for that argument.

I just hope that this is a local* phenomenon which has
been propogated by the newcomers mimicing newcomers,
as Jeff has pointed out above. The trouble is that this
disease is spreading over several of the linked repeater
systems, meaning that the number of newcomers exposed
to this time waster is multiplied many times.

Maybe we're becoming like the Borg?

*Note: "Local" means local to the Washington, D.C. area.

>highly recommend it. You can sometimes find surplus Motorola and GE voters
>on the used market.

The Motorola Spectra-TAC requires either TLC to keep working
within established parameters or some reworking. A recent
article in Mobile Radio Technology (or similar rag)
discussed how wonderful the improvements made by the author
were, but failed to provide any substantive detail on
how to implement those improvements.

>> Anyone have suggestions on how to preserve audio
>> fidelity over the UHF link?

>deviation of the links, you can get away with no limiter. The audio can be
>made flat from below 100 Hz to above 3 kHz with normal narrow-band FM

I second this. You essentially want a pair of wires extended
from the remote site to the transmitter site via the
magic of radio. The less processing in this path, the better.

>> What is the best way to match the remote receiver
>> audio to the main receiver?

>This is the most important aspect of a voted system. If the receivers don't
>match, the voter will tend to favor one receiver over another.

One method I have seen used is to simply transmit the main site
receiver audio to the main site via radio, however short the
distance. This has two advantages:
A) it matches the audio response to that of the
other sites, assuming you use similar equipment
and configuration;
2) if you suddenly need to make your repeater split-site
to eliminate interference, the process is simplified:
just pick it up and install it at some distance
from the transmitter. *

The disadvantage is that it adds complexity and cost where you
might not want it.

>I think you'll be pretty happy with it. The only down side is the additional
>maintenance of the link equipment and voter.

As I recently commented to another gentelman considering entering
the repeater business, do not underestimate the amount of
time that a more complex repeater system can consume.
The analogy is the big, empty hard disk which soon is consumed
by new software and data. :)

*Note 2: E.g. we had a single-site repeater suddenly beset
with howling feedback starting every sunrise and stopping every sunset.
It was WTOP (1500KC) mixing with WLMD (900KC); if you do the math,
you'll find that the difference of these two stations is = 600KC.
Ta da! Instant intermodulation products. We split the main receiver
away from the transmitter and all was right in the world again.

Last time I posted a question about buying an HT, many responses said to make sure to ask around here... so here are a few more questions:

What's the difference between the Icom W2A, W21A and W21AT?

What's the difference between the Standard C558A and C178A?

DJ-580T, IC-W21AT, TH-78A, C588A & FT-530 These five HTs were reviewed in last month's QST and as they all have various interesting features, I'm having a hard time choosing between them. To help differentiate them, I would like to know how modifiable they are. Can any of these models NOT be modified to pick-up aircraft frequencies? (Yes I know that two of them don't need to be modified at all.) Now could any of these be modified to receive cellular frequencies without getting bad intermod problems? And the last question, which of them can be modified to transmit on a commerical frequency? (I know that the FCC probably would not approve of this and that if I want scanning I should consider a separate scanner, but I do not want to have to carry an HT, a commercial radio and a scanner.)

If you have any other comments I would of course appreciate them greatly.

Thanks,

Marc Wollemborg

64. Need info on Kenwood R-1000

Newsgroup: rec.radio.amateur.misc

From: Matt Moore <mattmoore@delphi.com>
Message-ID: <RU2shjm.mattmoore@delphi.com>
Source record: 269076

I have recently gotten hold of an R-1000 with no documentation. Does anyone have an owners manual or can you give me any info on it. Can it be computer controlled? Kenwood no longer supplies manuals for it so I am sort of up the creek here. Any info would be helpful. Please email me at MATTMOORE@DELPHI>COM.
Thanks
KE6CZM

>propagated?

I'll say!

The latest thing around here, and I hope it is not becoming
accepted practice nationwide, is to key up and say "Here is" or
"This is" then quit transmitting to wait a second for
the <beep>, then continue transmitting your callsign
to check into a controlled net.

Not only is this a waste of net time, it just sounds stupid.

I can anticipate that someone will rationalize that this
pause allows one to discern if he is doubling with another
station trying to check in, a la W3HXF. It don't work!

In fact, it is even worse than simply transmitting your
callsign and shutting up because callsigns have variable
length, "this is" takes almost exactly the same time
to speak regardless of the speaker. So much for that argument.

I just hope that this is a local* phenomenon which has
been propogated by the newcomers mimicing newcomers,
as Jeff has pointed out above. The trouble is that this
disease is spreading over several of the linked repeater
systems, meaning that the number of newcomers exposed
to this time waster is multiplied many times.

The practice you're referring to has been used on (some) USAF MARS
nets for awhile now, and in fact is taught as "good operating
practice".

I'm with you, though. I think it sounds dumb and in my experience
does NOT reduce the number of doubles during check-ins. You hit
the nail on the head -- the phrase (proword, for you MARS types)
"this is" takes virtually the same amount of time regardless of
who the op is. If two ops key down at the same instant, they
will "hear" each others' pauses, and keep on going, thinking that
they aren't doubling with someone else. The few times I've seen
this work is when either a) one of the ops speaks much slower than
the other, or b) one of the ops holds the PTT switch a touch longer
and some background noise is transmitted, thus letting the other

op hear that there is another station on frequency.

Personally, when I check into a MARS net, I generally wait until
it seems all the other ops in my state have checked in, then
check in when NCS says "Any others from state XX?" I generally
don't have the loudest signal on freq, so that generally works
the best -- I just mash the PTT, and give the full check-in
statement, just like the manual says. No pauses here.

ZCZC AE16
QST de W1AW
DX Bulletin 18 ARLD018
From ARRL Headquarters
Newington CT March 31, 1994
To all radio amateurs

SB DX ARL ARLD018
ARLD018 DX news

The items in this week's bulletin are courtesy of Bob, W5KNE, QRZ DX, Chod, VP2ML, The DX Bulletin, Bob, WB2DIN, James, K6OZL, the Yankee Clipper Contest Club PacketCluster network, and Contest Corral in QST. Thanks.

YEMEN. Achmed, ex HZ1FM, has activated club station 7O1AA. The return of 7O1AA to the airwaves was on March 30. Equipment left by Paul, F6EXV, is being refurbished and expected to be on-line soon. Schedules for QSOs with stateside stations have been set up. On Friday try 14243 kHz at 1500z with OE6EEG as net control. On Saturday try the same frequency at 1600z, again with OE6EEG. Plans are to move to the 14226.5 Family Hour Net shortly thereafter. QSL via Box 485, Aden, Yemen.

MACAO. XX9AS, OH6DO, OH2KNB and OH2BH have an Easter Holiday gift for you. They will be putting XX9TZ on the air from the Hyatt Regency on Taipa Island from Friday, April 1 through Monday the 4th. Though this will be an all band effort, pay particular attention to 25 kHz up on 40, 20, 15 and 10 meters for CW, and 7065, 14195, 21295 and 28495 kHz for SSB.

FRANZ JOSEF LAND. R1FJC has been on the air recently. This could be the first of a new series of call signs for the island.

JUAN DE NOVA ISLAND. Listen for FR5ZQ/J to be active through the end of April. Check 14247 kHz between 1700 and 1900z, and 14256 kHz from 0200 through 0400. QSL via CBA.

ARLD018 Part 2

EUROPA ISLAND. FR5ZU/E is on the air and plans operations to last for four or five weeks. Try the same frequencies and times listed for Juan de Nova above. QSL via CBA.

BANGLADESH. UA4RZ plans to be signing S21ZL soon.

BANABA ISLAND. Listen for T33CS and T33KK throughout this weekend. QSL via G4WFZ and SM7PKK respectively.

TRINDADE ISLAND. PY1UP will be on as PY0TUP from April through August. QSL his home call sign.

NIGERIA. Rudi, DL9GMM/5N0, will be on until year end from Lagos, mostly with CW at 100 watts. Try 3513 kHz at 2300z, 10104 at 2350 and 14014 at 2115. QSL via home call sign after his return to Germany.

THIS WEEKEND ON THE RADIO. The Holyland DX Contest, sponsored by the Israel ARC, is a 24 hour event that starts at 1800z April 2. Exchange signal report and serial number beginning with 001. Israeli stations will send their area instead of a serial number.

The SP DX CW Contest runs from 1500z April 2 through 2300z April 3 on 160, 80, 40, 20, 15 and 10 meters. Non SP stations send a six digit serial number consisting of RST and serial number starting with 001. Polish stations will send RST and a two letter province designator.

For more details on these operating events, check page 119 of March QST.

Don't confuse a walkie extender with a remote base.

Proper remote bases are indeed duplex; it's up to the controlling station to equip itself with a duplex radio if it wants to take full advantage of the remote's capabilities.

I'm not aware of any of the off-the-ham-shelf radios that can duplex on the same band. Modified commercial radios can do so in many cases: I've run Motorola Micors and Mitreks in that way.

Some remotes have taken to having dual inputs and talkbacks on different bands (450/900, 450/1200, etc) in order to allow duplex use by people with radios that won't duplex in the same band but which can listen on one band whilst transmitting on another. It's essential to get the audio phasing correct so that the audio won't cancel when the user station is listening on both bands simultaneously.

At home, it's simple to use two antennas for your base station to talk to the remote. With proper physical isolation, duplex is achievable on the 450 band at the standard 5 MHz split. My home radio is an old duplexed Micor, with a pair of small beams aimed at the remote on its mountaintop 30 miles away. The beams also help eliminate interference from the other remotes that share the channel with mine.

Mobile duplex operation can be a bit more challenging, especially when you're running more than 30 to 50 watts output. Two antennas with broad pass cavities will allow duplex operation over a 1 to 2 MHz tuning range, which is sufficient for many communities. I ran this configuration for many years.

For single-antenna operation, the typical CellWave-type mobile duplexer (a notch-only device) is still effective for half a meg or so, which may be sufficient.

Unfortunately, my current car radio (an old Syntor) won't duplex because the synthesizer is shared by both RX and TX, and shifts between on-channel and LO at changeover. I'm seriously considering going to a non-synthesized radio in order to regain the mobile duplex, which I really miss.

One point: if you're going to run duplex, get the best noise-cancelling microphone you can buy. Feedback is TACKY.

rbono@cosmos.nectech.com (Richard J. Bono) writes:
> Beeps breed bad habits!

It has for some time seemed strange to me that the technos in charge of a repeater would go to great lengths to eliminate the squelch burst (sometimes going so far as to install audio delays that absolutely cripple duplex operation!) and then have to go back and ADD a beep that does NOTHING that the noise burst didn't originally do.

I prefer a repeater which has a modest user squelch tail and a 1-second dropout delay ("hang time"), and NO BEEPS.

Want a useful 'over signal'? Substitute a burst of 9600 bps packet and transmit the repeater's complete system telemetry in the packet. It will sound just like a squelch tail - and has the secondary effect of identifying the repeater on every single transmission. NO MORE BEEPS!
- Brian

A week or so ago, I asked the net for advice on a mobile 2m/440 rig that had particularly good out-of-band receive characteristics. Thanks for the advice from over 20 folks.

I apparently was not clear enough in the original post -- I was looking for a unit which could be installed in an auto, not an HT. But the HT advice was good, too.

FYI - I have ordered a Kenwood TM 742A. OK -- let's hear how horrible/great a decision I made.

I was quite surprised and pleased to hear from a couple of folks about Standard products. I hardly ever hear about this brand of radio products. Anyone willing/able to discuss?

You can tune it by adjusting the length, checking it on the meter until
you find something < 1.5. Scribe that length into the side of the antenna
so you can find it again without the meter.

BTW, there is usually no need to cross-post so widely. I've set followups
to just rec.radio.amateur.antenna.

Greater than 2 MeV Electron Fluence for 02 APR is: 5.9E+06

SYNOPSIS OF ACTIVITY

Solar activity was very low. Only weak B-class x-ray and
sweep activity was reported this period, all before 02/1300Z.
For the first time since 22 Sep 93, the disk is spotless. Of
the two spotted regions reported yesterday, Rgn 7696 rotated
off the disk and Rgn 7698 (S14W36) lost its spots.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at mostly quiet to unsettled levels until 02/0900Z when the field experienced active to minor storm levels. A favorably positioned recurrent coronal hole is believed to be responsible for activity increases.

Geophysical activity forecast: the geomagnetic field is expected to remain at mostly active to minor storm levels at middle latitudes and minor to major storm levels at higher latitudes. Isolated periods of severe storm conditions can also be expected. Based on recurrence, these conditions are forecast for the entire period and are expected to persist through at least 9 April.

Event probabilities 03 apr-05 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 03 apr-05 apr

A. Middle Latitudes
Active 30/30/30
Minor Storm 35/40/40
Major-Severe Storm 25/25/25

B. High Latitudes
Active 30/30/30
Minor Storm 40/40/40
Major-Severe Storm 30/30/30

HF propagation conditions were near-normal until the latter part of the UTC day when levels of auroral and geomagnetic activity increased to storm levels. This produced below-normal propagation for transpolar and especially for transauroral circuits. Conditions will continue to deteriorate, affecting the middle latitudes over the next several days. Major to severe geomagnetic storming and strong levels of auroral activity could give frequent periods of useless propagation over the high and polar latitude regions, with poor to occasionally very poor propagation over many middle latitude regions. Conditions are not expected to improve during the next week.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Since the Boston ARC archives (oak.oakland.edu:/pub/hamradio) have been
available for some time now, and many of you have acquired many programs
from it, I would now like to ask for your comments.

Please comment on:

* What you like about what the site has to offer

* What you do not like about what the site has to offer

* What changes you would like to see

* What you would like to see added/subtracted from it

* Any other specifics

Please send your comments directly to me, as I will not be reading news
much for the next few months.

Thank you very much.

Scott

87. Operation of Ham radios on planes

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-03 08:17:17 UTC
From: dev@armory.com
Message-ID: <CnoCCu.s6@armory.com>
Source record: 268999

i know this subject comes up every so often, and if it's in teh faq, then i didn't look carefully enough, but what's the deal on operation of ham radios on a plane?

last time i saw this subject mentioned i believe the ruling was that the FCC said it was up to the FAA, and the FAA said that it was legal if the pilot of the plane said it was okay. i have a friend who is a pilot and a ham, and says that other fellow pilots who are also hams have been known to put ham antennas on their planes and put radios in the plane and use 'em.

now, of course i'm not silly enough to try to operate my HT on a commercial plane, since the chance of being able to talk to the pilot is about nil, and they'd probably say no anyways, but as far as i can tell, if it's a private pilot, and they don't think it will interfere with the avionics (easy enough to test on the ground, or briefly in the air, it's cool to use yer radio if you want.

anyone know where the official rules on this might be found? the FCC rule book? the FAA's version of a rule book? i'd just like to be able to point to some "official" document that says yea, nay, or depends.

PR>>to stop transmitting so the remote stops transmitting, so it is in a
PR>>position to receive my signal and turn around.

PR>Cellular phones do this all the time, including pocket sized ones.
PR>In fact some of them are smaller than any ham HT that I know of.

Ah, but when you're talking about a 45MHz split, as opposed to a 600kHz
split, the "bandpass" and the tuning of the cavity is HUGE! In fact,
it's pretty well tantamount to a cxirculator than a cavity/duplexer

>I bet that my wife could do more to trouble shoot a digital dashboard
>in a GM car than could the majority of Graduated Electronic techs!
>And she has only learned from watching me.

So what else is new? In the industry, we've always looked on these trade school grads as merely apprentice material. We know we'll have to teach them how to do trouble shooting and economical repair on the job. And a freshly minted engineer usually costs quite a bit more than he's worth until he gains a year or two of experience on the job. What they teach in school isn't what an employee really needs to know on the job.

>I recently looked for some Ham Radio Magazines, but only found 1 after

>
>I remember years back, you could go to just about any convience store
>or food store and get Popular Electronics, Radio Electronics, Elementary
>Electronics, CQ, 73, and on some occasions QST.

You must shop in the wrong stores. Winn Dixie supermarkets carry all of the above except QST (though some of the mags have changed names). The league doesn't seem to push rack sales of QST, but since it's supposed to be a membership journal, I guess that's understandable.

>Those days are gone. I counted no less than 12 different Wrestling
>mags, 6 music magazines, 5 bridal mags, 6 off road mags, 3 hot rod mags,
>4 different bathing suit mags (sim to sports illustrated swimsuit)

Only 3 Hot Rod mags? You're definitely shopping in the wrong stores. And where are the 20 or 30 computer mags?

>At my job, we have entry level data entry people who make higher salarys
>than the Trained & Experienced Technicians who do the final test &
>debugging of the products.
>
>It seems that Technicans & Engineers are a dying/ignored group,
>bean counters & paper pushers are the cream of the crop.

Sigh, it was ever thus. If you want to make money, being an electronics tech or engineer isn't the road to wealth in companies. You'll have to open your own shop, and then you'll find you're spending more time as an administrator and financial manager than you are at being an electronic tech or engineer. That's the business world for you. Businesses

are money machines, and those who tend the money are the ones who get to take home the most money. Engineers and techs are expenses to be minimized.

>Other people besided Gary may be confused by this, so I'll post an
>explanation.

I'm not confused. I calculated the delays based on the graph you posted.
Delay equals the reciprocal of frequency times the total phase delay in
degrees divided by 360.

>The graph above plots phase, not delay. A constant delay results in
>a constantly-rising phase plot. For example, a 1 millisecond delay
>is 36 degrees at 100 Hz, 360 degrees at 1000 Hz, 3600 degrees at
>10,000 Hz, etc.

Yeah, but that isn't what your graph showed.

>While the plot above looks like a straight line, it really isn't because
>of the logarithmic x-axis.

Bingo! I check plotted it on semi-log paper then replotted on a linear
graph from which I calculated my differential delay numbers.

>However, as the chart that Tom Bruhns posted of
>a typical phase-shift network shows, it really isn't too bad. His chart
>shows that between 400 and 2786 Hz, the maximum phase error from a straight
>line varies smoothly between +17.2 to -20.9 degrees, which is far better
>than you would get with a typical transceiver-type crystal filter.

As I commented, his table looked much better than your graph, and I
calculated differential delays based on it too that were nearly 10
times smaller. It's just that I've seen phase plots for crystal and
mechanical filters which, *away from the edges*, where Tom's table
looked bad too, looked at least as good as Tom's phase shifter. And
note also that the network Tom modelled is not "typical", it is
considerably more complex than the traditional Dome based networks.
They tend to really suck in the differential delay department because
they're based on the same simple semi-log response as your graph. I
don't think he included an AF pre-filter in the table either.

I'll readily agree that the receiver type filters used in many ham rigs for SSB transmit signal generation, suck wind. But that's a different issue. Good filter designs are available, as witness filters we use for VSB video, and in certain telco FDM equipment that have a maximally flat phase response in the passband. We simply can't tolerate differential delay in video systems, yet we use filters instead of phasing to generate VSB signals. It's not a matter of economy, it's what works best.

This is the earliest "Walkie-talkies on planes" posting I have
ever seen. Usually they start with the summer holiday season.

Now this damn thread will refuse to die. The net.cops from the
aviation stuff will chip in. We will be told that if you turn on your
radio hundreds will die a terrible death.

I of course have operated my walkiie-talkie from commercial
aircraft. I have done this since 1974. I have even operated my 2M
walki-talkie from the flight deck. I am still here, isn't that
amazing.

I even have a friend who was a ham (SM7???) and a commercial
pilot (SAS/Sterling) who even used his HF QRP rig to send Morris from
the flight deck on transatlantic flights.

But despite my anecdotal evidence. I will be drowned out by
people telling imagined horror stories of avionics malfunctioning
because someone generated an unwanted Watt of RF. The anecdotes of
real malfunctions will be pretty thin on the ground though.

The following is a QST

A bizarre licensing scam in Texas leads to the forfeiture of
ham tickets, two more hams are barred by a court order from
operating on a Southern California repeater and a famous ham
astronaut is off to work in Russia.

(*****
TEXAS VE SCAM

The FCC is cancelling the amateur radio licenses of at least
two people. This, as the Commission expands its investigation
into an elaborate scam involving bogus ham licenses. The scheme
involves a complicated web of name and address changes, callsign
upgrades, an undercover examinee, and allegations that the names
of deceased hams were used to obtain amateur radio licenses.
The scam was uncovered during a routine check of lists of
people getting their ham licenses. Investigators became
suspicious when they saw a familiar name: Hector Cruz. That's
the name of a man linked to an early 1980's scheme when people
tried to get licenses using the names of deceased hams. Further
investigation led to Luis A. Rivera, KP4UP, and Gleason Petit,

AB5KT. Both were listed as volunteer examiners in Texas. Records show Rivera was an examiner at the session where Hector Cruz as licensed. Luis Rivera was also involved in the earlier scam. Examination sessions Rivera administered allegedly include widespread irregularities. Rivera sessions reportedly list the names of out of state applicants as taking tests. In fact, they never showed up. An undercover examinee attended one session and found evidence of fraud.
The man claiming to be Gleason Petit has reportedly admitted that his real name is Anthony Hopkins. The real Gleason Petit was an amateur operator who died in 1985. Luis Rivera denies he is the same person named in the earlier scam. But he and Hopkins were told to turn in their amateur licenses. How many fraudulent licenses were issued under this scheme? Information on that is not yet available.
This tangled web of apparent fraud and conspiracy remains under investigation.

CLARA REPEATER HARASSMENT

Two more southern California hams accused by the Claremont Amateur Repeater Association of harassing the clubs two meter repeater have been ordered by a civil court to stay away. Only a month after successfully obtaining a restraining order against Tim Seawolf, KJ5KE, that bars his operation on or near frequencies maintained for use by the CLARA systems, the club was in court again on March 24th. This time seeking a similar ruling against Drew Feldman, N3KSO, and Anthony Cardenes, WA6IGJ. Gary Krist, KI6FG, is the president of the Claremont Repeater group.

"We prevailed again in court against Mr. Anthony Cardenes, WA6IGJ, and Mr. Drew Feldman, N3KSO. We did obtain our permanent restraining order. The Defendants were once more ordered to keep away the typical hundred yards from the meeting sites, etc., etc. Not to use the Claremont Repeater, nor its assigned frequencies. Ultimately we were awarded attorneys costs and fees in the amount of $3000 to be paid by the defendants. Each shall pay $30 a piece on the first and fifteenth of each month until their debt is paid off." Gary Krist, KI6FG, President of the Claremont Repeater group.

It's not over yet. The Claremont group still has several other legal actions pending or planned. This, to insure that those it deems to be undesirable are kept off the clubs repeaters and away from harassing its members.
At airtime its not known if Cardenes or Feldman plan to file an appeal.

INDONESIA QUAKE

Amateur radio was at the forefront of relief efforts when more than 120 people died in an earthquake in Indonesia in February. Press reports say that ham radio was the only communication initially available from the affected area. The town of Liwa in the province of Lampung suffered the greatest damage and loss of life. A government official told The Jakarta Post that ham radio was the only way to communicate with Liwa.

KB5AWP TO RUSSIA

SAREX Astronaut Ken Cameron, KB5AWP, is off to Russia. Ken has been named Director of Operations - Russia and manager of NASA operational activities at the Russian control center at Kaliningrad. There KB5AWP will work with Russian Space Agency engineers and flight controllers on the US - Russia cooperative space program. Among his many duties Ken will supervise NASA astronaut training at Star City and develop plans and procedures to support joint space shuttle - Russian Mir space station flights and space station development. He is also expected to command one of the early shuttle docking missions with Mir. Cameron, 44, has flown on two SAREX shuttle missions, STS-37 in 1991 and STS-56 in 1993. Both these were all-ham flights.

RADIO SHACK IN RUSSIA

Word that Tandy Corporation has opened its first Radio Shack store in Russia. The Moscow store, which officially opened January 14th. It is identical in look and layout to stores in the USA and is franchised to the Trident Group, a Florida based international distribution company. Its being managed by Trident A O, a Russian company.

(*****
ITAMSAT PROBLEM

The Itamsat ham radio satellite has developed what may be a major problem. Sometime during the week of March 7th, the PSK modulation on the primary transmitter became more and more difficult to decode. According to Alberto Zagni, I2KBD, of the Itamsat command team, a residual carrier and lower output power seem to indicate a failure in the PSK balanced modulator. Alberto says that the condition seems worse at the satellites low current power setting. He notes that increasing the power level makes the demodulation easier, but this solution is not acceptable due to power budget constraints.
Ground controllers decided to switch to the secondary PSK transmitter on 435.822 MHz. The first two passes over Italy confirmed the correct operation of the spacecraft. Action is now being taken to analyze the performance of the satellite in this new configuration. Alberto says that the on board flying BBS is working as usual and status bulletins will be uploaded regularly.

ARRL DX ADVISORY COMMITTEE ACTION

In DX, the ARRL DX Advisory Committee has announced that the question of new country status for Pratas Island, BV9, has been removed from the DXAC agenda pending receipt of further information from the petitioner. The committee says that on receipt of the requested information, the matter will be placed on the agenda, and a vote scheduled. No vote had ever been held on the Partas Island DXCC country status petition.

(*****
BLANCARD TRIBUTE

A special tribute to a very special ham. Each year, members of the Birmingham Amateur Radio Club in Alabama recognize a member for his or her contributions to ham radio. BARC normally

presents its Citizenship Award during the Club's Hamfest, held in May. But this year is different. The 1994 Citizenship Award was presented two months early. That is because the clubs recipient and the circumstances are special.
The callsign AA4LB is a familiar one to central Alabama amateur radio operators. Frank Blanchard has contributed his time and talents to the ham community in many ways. He has served in the clubs administration, on its hamfest board of governors, he chaired field day, and Frank played a key roll in setting up the volunteer examiner coordinator program. Fellow club members say no one deserves this years Citizenship Award more than Frank Blanchard.
On a cool spring like evening club members made a surprise visit to the seventh floor of a Birmingham hospital. That is where Blanchard fights a life threatening illness.

"It was a very emotional scene because you know he's. At this stage of the game he is very emotional. It was very heart warming. That is about all I can say." Genoa Blanchard, wife of Frank Blanchard, AA4LB, BARC Citizenship Award winner for 1994.

It is hard for Franks wife, Genoa to talk about. She and her husband of 34 years share a lifetime of memories. Ham radio has been a big part of it. Taking part in county hunting nets is one of Franks favorite ham activities.

"We sat on many a county line with me looking out the window and him (Frank) talking. You know it was something that he enjoyed and he just lived and breathed ham radio. You can come down to our house and look in his ham shack and know that. He has got practically every piece of equipment that was ever made." Genoa Blanchard.

Presenting Frank with his award was a tearful experience.

"He was very pleased and honored and surprised to get this award. He was just, you know, very grateful, very emotional." Genoa Blanchard.

Frank is known for always thinking ahead. He has already directed family members to make final arrangements and other difficult decisions. Fifty six year old Frank Blanchard knows that the future holds no promises. But he is sure of one thing. However much time is left, his life has been made richer thanks to the loving fraternity that is Amateur Radio.

Ham-Radio Flea Market Sunday, April 10 in Framingham

FRAMINGHAM, Mass. -- The Framingham Amateur Radio Association (FARA) is sponsoring a ham-radio-related flea market and exam session on Sunday, April 10, at Framingham High School. Dealers and private individuals will be selling radio equipment, parts, books, and other related material. In addition, FARA will be conducting exams for all categories of amateur radio license.

Admission to the flea market is $5 at 9 a.m., and $2 at 10 a.m. and after. Most exams require a $5.75 fee. Pre-registration for exams is suggested; walk-ins will only be accepted on a space-available basis up to 10 a.m. For more information about exams, contact Dick Marshall at (508) 877-0563. For information about the flea market, call Lew Nyman at (508) 879-7456.

Talk-in will be available the day of the flea-market on the W1FY 2-meter repeater, 147.15 MHz.

Flea-market proceeds are used to support the activities of FARA and the Framingham High School amateur radio club, as well as FARA's annual scholarship program. For general information about the Framingham Amateur Radio Association, call the FARA club station at (508) 879-8097, or write to P.O. Box 3005, Framingham, MA 01701.

The FARA ham-radio station, W1FY, in the basement of the Danforth Museum building, is open to the public most Wednesday evenings and Saturday mornings. Meetings are the first Thursday night of each month, 7:30 p.m. at the club station, the next meeting is April 7. All are welcome.

AMSAT-Austria Sponsors Space Education Seminar 16-APR-1994 In Innsbruck

The AMSAT-Austria group (AMSAT-OE) will announce their first Educational Development Seminar meeting using the amateur radio satllites AO-21 and DOVE (DO-17). It is most fitting that these satellites will be used to broadcast the announcement of this meeting because the theme is the advancement science education through use and observation of OSCARs. Look for the announcement from DOVE beginning on 15-APR-1994 in its telemetry broadcasts and look for the synthesized voice message from AO-21 this week.

The meeting will take place on 16-APR-1994 at the Technical Highschool of Innsbruck, Austria and is being sponsored by the Department of Electronics and Telecommunication. The presenters planned will be OE1VKW, DG2CV, and EA2CLS/KB7HTA, and I2KBD. All of these radio amateurs are well know in educational circles. They have a lot of interesting information for those in attendence. All are invited to join AMSAT-OE at this seminar. For more information, contact Wolf Hoeller (OE7FTJ) at his INTERNET address of uibk.ac.at.

[The AMSAT News Service would like to thank Wolf Hoeller (OE7FTJ) for this bulletin item.]

OPERATING TIPS FOR AO-27

HR AMSAT NEWS SERVICE BULLETIN 092.02 FROM AMSAT HQ
SILVER SPRING, MD APRIL 2, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-092.02

N8QGC & N4TPY Offer Some Operating Suggestions For AMRAD-OSCAR-27 (AO-27)

N8GQC has been working staions on AO-27 all the way from his Detroit area QTH to as far away as Mexico City, Mexico, Baffin Island, and the North West Teritories. He notes that these are great contacts for a Low Earth Orbiting (LEO) satellite. In his discussions with the AO-27's ground control station station operator N4TPY, N8GQC has put together a list of "good operating practices" that N4TPY would like all those who use AO-27 to

follow:

1. Please use as little power as possible. It is recommended that you use your H/T when possible. If not, then use no more then 25 Watts ERP.

2. Please try to be kind to other satellite operators. The object should be to make as many contacts as you can, and to step on as few as possible.

3. The satellite has no set schedule of availability at this time. The control stations will make it available only on weekends during daylight passes. Sometimes during the week AO-27 may also be on, but it will be "hit or miss."

N8QGC has worked AO-27 with a very simple set up. He transmits on the uplink frequency of 145.850 MHz using a homebrew 1/4 wave vertical antenna. His total uplink power is 10 watts. N8GQC find that this gives him a very strong signal into the satellite. But he especially wants hams to know that he has also worked AO-27 using a H/T with a "rubber-duck" antenna and 2.5 watts output! However, receiving this satellite can be somewhat difficult. N8QGC uses a KLM 440-6X antenna to receive. This is the the same 6 element UHF YAGI that he uses for transmitting on AO-21 when he isn't communicating through AO-27. AO-27's downlink can be heard on on 436.800 MHz. N8QGC is in the process of experimenting with several different receiving antennas. For mobile operations using AO-27 he has tried using his full-wave 70CM antenna on the car but has noted that doesn't work very well. On the receive side, he reports, it still takes a 6 element Yagi antenna.

By keeping the above suggestions in mind, all users of AO-27 will be able to enjoy it to its fullest capabilities.

[The AMSAT News Service would like to thank N8GQC & N4TPY for this bulletin item.]

SATELLITE W.A.E.Z.S. AWARD

HR AMSAT NEWS SERVICE BULLETIN 092.03 FROM AMSAT HQ
SILVER SPRING, MD APRIL 2, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-092.03

Worked All European Zones by Satellite (W.A.E.Z.S.) Award Available

AO-10 and AO-13 user Mario Di Iorio (IW6BNC) is active from his QTH in Macerata located in the center of Italy, grid square JN63RH. Mario is also the manager of W.A.E.Z.S (Worked All European Zones by Satellite) Award. Mario reports that very few radio amateurs know of the existence of this award. The European zones are: 14, 15, 16, 20, and 40. The award is divided into a bronze, silver, and gold award. The follwing is the criteria for

each catagory:

1) The basic award or the "Bronze" award can be obtained with a single QSO with any radio amateur station in Macerata, Italy and 3 European zones.

2) The "Silver" award can be obtained with making contacts with 4 European zones and 1 operator from Macerata, Italy.

3) The "Gold" award can be obtained with 5 European zone contacts plus one contact from any station in Macerata, Italy.

The follwoing are the only valid amateur radio operators from Macerata. And they are are: 1) IK6LMB, 2) IW6BNC, 3) IK6MQM. Send your requests for this award to:

W.A.E.Z.S AWARD MANAGER
c/o A.R.I. MACERATA
P.O. BOX 66
62100 MACERATA - MC ITALY

and please include 10 IRCs.

The orginal QSL cards are not needed as proof of confirmation of the contacts but only a list of QSOs containing all the details of the contacts between the stations involved. This award is valid for a single satellite but it changes with respect to the different modes of operation, e.g., SSB, CW or a mix of the the two modes. IW6BNC hopes to see many stations striving to obtain the W.A.E.Z.S award. If you have further questions about this award and its rules, direct your inquiries to:

Mario Di Iorio (IW6BNC)
P.O. Box 66
62100 Macerata - MC
Italy

Or you can send IW6BNC a packet message to his local packet radio BBS of IW6BNC @ IW6BET.MC.ITA.EU.

LATEST ZRO TEST NOTES

HR AMSAT NEWS SERVICE BULLETIN 092.04 FROM AMSAT HQ
SILVER SPRING, MD APRIL 2, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-092.04

WA5ZIB Offers The Some Observations On The Recent AO-13 ZRO Tests

The current round of ZRO Tests via AO-13 are complete. No tests were missed and all went well. Some interference was experienced on the Feb-ruary 19th test, but it was not critical. The tests of February 19th and 26th were completed just prior to AO-13's switch to Mode "S" with no time

available for discussion with participants after the tests. These ZRO tests were scheduled very close to the mode-switch time due to a minor error in predictions made months in advance. The February 26th test was begun a few minutes early to ensure that all levels would be sent prior to mode switch. Many thanks to those on the AO-13 AMSAT Operations Net that identified the potential schedule conflict before it became a problem.

No new Z9 reports have yet been received, but there's plenty of time to send in submissions. There is no charge for copy verification although an S.A.S.E. is appreciated. Send your copy to: Andy MacAllister (WA5ZIB), AMSAT V.P. User Services, 14714 Knights Way Drive, Houston, TX 77083-5640.

More tests will be scheduled during the next season of Nadir pointing for AO-13. The dates will be posted to the AMSAT News Service (ANS).

WEEKLY OSCAR STATUS REPORTS

HR AMSAT NEWS SERVICE BULLETIN 092.05 FROM AMSAT HQ
SILVER SPRING, MD APRIL 2, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-092.05

Weekly OSCAR Status Reports: 02-APR-94

AO-13: Current Transponder Operating Schedule:
M QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Mar 19-Apr 04
Mode-B : MA 0 to MA 90 |
Mode-BS : MA 90 to MA 120 |
Mode-S : MA 120 to MA 122 |<- S beacon only
Mode-S : MA 122 to MA 145 |<- S transponder; B trsp. is OFF
Mode-S : MA 145 to MA 150 |<- S beacon only
Mode-BS : MA 150 to MA 180 | Blon/Blat 180/0
Mode-B : MA 180 to MA 256 |
Omnis : MA 230 to MA 30 | Move to attitude 235/0, Apr 04 240/0, Apr 04
[G3RUH/DB2OS/VK5AGR]

FO-20: The following is the current schedule for transponder operations:
ANALOG MODE:
6-Apr-94 6:45 -to- 13-Apr-94 7:10 UTC
20-Apr-94 7:35 -to- 27-Apr-94 7:55 UTC
11-May-94 6:54 -to- 18-May-94 7:20 UTC
Digital mode: Unless otherwise noted above.
[Kazu Sakamoto (JJ1WTK) qga02014@niftyserve.or.jp]

AO-21: N8QGC has been working AO-21 from Detroit QTH and notes that AO-21 is operating normally. It is on the following schedule: 5 minutes of FM repeater operation followed by 4 minutes of WEFAX transmissions. Finally, the cycle is conclued with 1 minute of packet before switching back to FM repeter mode. [N8QGC]

AO-27: AO-27 now acting as a 'J' mode FM transponder and is proving very popular in Europe, with increased activity daily. It has a strong excellent quality downlink that can easily be heard on a hand-held receiver on 436.800 MHz +/- some 10 KHz of shift Doppler shift correction. It's sensitivity is far greater than 'B' Mode on AO-21. If there are no QRO stations on 145.850 MHz (+/- some 3 KHz of Doppler shift), uplinking using a hand-held which can produce 2 watts ERP is capable of putting an excellent full quieting signal into the transponder. As evidence G3IOR has worked several other European stations using 2.5 watt hand-held dual-band transceivers and for optimum footprint coverage to VE8DX who was running just 3 watts into a ground plane omni-directional from Baffin Island. All were fully quieting signals! [G3IOR]

STS-59: A brief reminder that STS-59 is scheduled to be launched on 07-APR-94 at 12:07 UTC and will carry the Shuttle Amateur Radio Experiment (SAREX) payload. For complete details, please refer back to the $ANS-071.02 bulletin.

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

Hello,

I downloaded the program sattrack for my UNIX box at home and compiled
it under linux. Everything went okay until I tried the program. The
program kept on telling me that the satellites have "crashed already".

I tried AO-21, Mir and Oscar 13, they all gave me the same result, and
I know, for a fact, that the satellites have not been crashed :-).

Please help me, thanks in advance.

73 de KE6BCU, Benjie

-------here are the scripts I used and the results I got back---------------

Here are the lines I used for AO-21:

```
AO-21
1 21087U 91006A 94069.83595116 .00000094 00000-0 82657-4 0 4439
2 21087 82.9370 215.4726 0036191 0.5572 359.5617 13.74535665156075
```

Here is the line I used for Sunnyvale CA in the sites.dat file

```
Sunnyvale CA 37.283333 122.200000 50.0
```

And here is what I got from the program, running "sattrack -v"

```
wales{benjie}41: sattrack -v

100. Re: Operation of Ham radios on planes

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-03 20:26:51 UTC
From: cravitma@cps.msu.edu
Message-ID: <2nn8qb$j4o@msuinfo.cl.msu.edu>
Source record: 269014

On Sun, 3 Apr 1994 08:17:17 GMT, strange alien beings caused Uncle Dave (dev@armory.com) to write:
> i know this subject comes up every so often, and if it's in teh
> faq, then i didn't look carefully enough, but what's the deal on
> operation of ham radios on a plane?

> last time i saw this subject mentioned i believe the ruling was
> that the FCC said it was up to the FAA, and the FAA said that
> it was legal if the pilot of the plane said it was okay. i have

It is OK if the "Pilot in Command" says so. This appears to be
different from the pilot in some cases, but I don't know why. Will ask
a friend of mine who is a pilot next time I see him.
>
> now, of course i'm not silly enough to try to operate my HT on
> a commercial plane, since the chance of being able to talk to
> the pilot is about nil, and they'd probably say no anyways,
> but as far as i can tell, if it's a private pilot, and they
> don't think it will interfere with the avionics (easy enough
> to test on the ground, or briefly in the air, it's cool to
> use yer radio if you want.

There is an additional requirement that if the plane is flying under
IFR flight rules, it must be above 10,000 feet.

> anyone know where the official rules on this might be found?
> the FCC rule book? the FAA's version of a rule book? i'd just
> like to be able to point to some "official" document that says
> yea, nay, or depends.

The name of the FAA rules is the "Federal Aviation Regulations (FARs)."
I don't know where to get a copy though.

/MC

103. Wanted: Programable Keyer

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-03 21:53:48 UTC
From: jherman@uhunix3.uhcc.Hawaii.Edu
Message-ID: <CnpE5o.8CC@news.Hawaii.Edu>
Source record: 269017

Of the 100 or so worldwide 10M beacons none are in Hawaii. I've been wanting to remedy this for quite some time. I'll be using a CB xmtr recrystalled to 28.2xx MHz into a 5/8 wave antenna.

The only item left to get is a programable keyer. Does anyone have one they want to sell (cheaply - it's for a good cause!)?

Thanks so much.

Jeff NH6IL

SB DX @ ALLBBS $OPDX.153
Ohio/Penn DX Bulletin No. 153

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 153
BID: $OPDX.153
April 4, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DL7VEE & DXNL, DF4RD, VE8EV, AD1C, K4CEF & Southeastern Cluster Group, K6OZL, WA8MEM, KF8VW, K8YSE, K8YVI, NE8Z and N0ZOH for the following DX information.

WHAT AN EXCITING PAST WEEK FOR DXERS! (But all good things come to an end.) Activity by T33CS and T33KK will end April 5th (QSL T33CS via G4WFZ and T33KK via SM7PKK). XX9TZ will be going QRT April 4th or 5th. Operators DL5XX, XX9AS, OH6DO, OH2KNB and OH2BH were active from the Hyatt Regency, on Taipa Island (QSL via KU9C). The four day operation from Pulau Layang-Layang Island (aka Swallow Reef in the Spratly Island group) will go QRT April 6th. The Germany operators from Zambia will be going QRT April 5th (See 9I below).

1B, TURKISH REPUBLIC OF NORTHERN CYPRUS (TRNC). Baldur, DJ6SI, is currently active as 1B/DJ6SI. His activity is mainly CW on all bands. At the present the TRNC does not have DXCC country status, but recently Igor, KU0J, has filed a petition for country status, which the DXAC is currently studying.

3A, MONACO. Ciao, I1YRL, will be active from here for two days starting at 1100z April 9th. This will be a CW only operation. QSL to I1YRL.

4U1ITU, ITU HQ GENEVA. When not active from Monaco, look for Ciao, I1YRL, to be active through the whole month of April. Also a special prefix of 4U9ITU will be used during the month of April. QSL to I1YRL.

5A0RR AND P5RS7. Romeo (aka 3W3RR) who is now active as AH0M/2, was overheard talking to Luis, XE1L, stating he will be traveling to Newington April 4th. He hopes to straighten out or clear up what is needed for his 5A and P5 operations to be accepted for DXCC. KYFC!!!

7O, YEMEN. GREAT NEWS!! On March 30th, the club radio station of 7O1AA was activated again by Achmed, a Yemen native who has returned to the country and was also once ex-HZ1FM. He has repaired equipment that was

left behind in Yemen by Paul, F6EXV. Check 14226.5 Family Hour Net starting around 1600z or try 14243 kHz at 1500z with OE6EEG as net control. It has also been mentioned, that Achmed may show up with Zedan (JY3ZH) on the Arabian Nights Net (14250 kHz at 0600z). QSL via Box 485, Aden, Yemen. INTERESTING NOTE: It was reported back in May of 1993, that the ITU requested the government of Yemen to relinquish either 4W or 7O. It was reported that the government chose to relinquish 7O, so Yemen is supposed to be 4W now. LAST MINUTE UPDATE: There have been reports of CW activity on Saturday, April 2nd. Achmed reportedly does not operate CW, so beware of SLIMS. Also there was bad news reported on Sunday. It seems Achmed is having rig problems (Lets hope it is not major!).

9I, ZAMBIA. Probably by the time you read this, Holger/DL7VTM (NODXA member) who was signing 9I2Z, along with Birgit/DG9WYL (9I2M) and Lutz/DL7VLA (9I2A), will be heading back to Germany, April 5th. Holger, on April 1st, reported that the group's operation has made some 9000 QSOs. He also reported they made 302 Oscar 13 contacts and 200 RTTY QSOs. During the CQ WW WPX Contest they operated Multi/Op and made 3000 QSOs primarily on 15 and 10 meters (40 meters signals were weak and 20 meters had local noise). QSL via DL7VRO. The group plans to attend the Dayton HamVention.

9Y, TRINIDAD & TOBAGO. 9Y4TSB is a new operator who only has had his license for a couple of months. He was heard on 21360 kHz between 2000 and 2100z. QSL to: Trueman Braithwaite, Bon Accord, Tobago - West Indies.

EI4VRU QSL CARDS. Scott, WD8NSD, informed OPDX that NR8U and he have been processing the cards for Barry, N2PNG, who was active from Ireland in December 1993. Barry is currently away at school, so both NR8U and WD8NSD have been computerizing his logs to making labels for the QSL cards. As of the past weekend, the cards were received from the printers and Scott reported the cards are going in the mail. DO NOT send QSL cards to WD8NSD or NR8U, only to N2PNG.

FT, KERGUELEN ISLAND. Pierre, FT5XJ, was heard this past weekend for over an hour on 14288 kHz beginning around 0315z. QSL via F5NLL.

IOTA NA-034. Dr. Rick Dorsch, NE8Z, will be active until April 9th as NE8Z/4 from various islands in the "Flordia State West" group. On SSB, look for him on the IOTA frequencies (14260, 21260 and 28460 kHz) and for CW, check 5 and 25 kHz up. QSL to K8LJG. ADDED NOTE: Rick mentions that all his XE1/NE8Z QSLs will be mailed out by April 15th. Colored QSLs are being printed and K8LJG has all the labels and logs.

VE8YEV, HENDRICKSON ISLAND. Operators VE8CF, VE8EV, VE8GC and VE8NC, from the Inuvik Amateur Radio Club, will begin operations at 2300z on April 8th from this not-yet-activated NWT (Inuvik Region) IOTA island group. They plan an around the clock operation on 20 meters and 15 meters, as well as some low band and satellite operations. QSL direct to any of the operators or via the bureau.

SAD NOTE. Eva, PY2PE, a well known "friend of the DX community" became a SILENT KEY, April 1st.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

106. HELP: my satellite program won't work

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-03 22:41:09 UTC
From: benjie@hh.sbay.org
Message-ID: <2nngm5$856@hip-hop.hh.sbay.org>
Source record: 269020
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.misc,sci.space

Sorry if you got a duplication, I had a little problem posting to the net.

Anyway, I downloaded the program sattrack for my UNIX box at home and compiled it under linux. Everything went okay until I tried the program. The program kept on telling me that the satellites have "crashed already".

I tried AO-21, Mir and Oscar 13, they all gave me the same result, and I know, for a fact, that the satellites have not been crashed :-).

Please help me, thanks in advance.

73 de KE6BCU, Benjie

-------here are the scripts I used and the results I got back---------------

Here are the lines I used for AO-21:

```
AO-21
1 21087U 91006A 94069.83595116 .00000094 00000-0 82657-4 0 4439
2 21087 82.9370 215.4726 0036191 0.5572 359.5617 13.74535665156075
```

Here is the line I used for Sunnyvale CA in the sites.dat file

```
Sunnyvale CA 37.283333 122.200000 50.0
```

And here is what I got from the program, running "sattrack -v"

```
wales{benjie}41: sattrack -v

107. Hustler RM-40S Resonator

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-03 22:57:05 UTC
From: hopken@interaccess.com
Message-ID: <2nnhk1$eo1@mailhost.interaccess.com>
Source record: 269021

Hello. I just bought a Hustler super resonator for 40 meters and was surprised to find that it did not fit my mast. It seemed like the thread was different. When I tried to screw it on the mast, it was very "wobbly" and would not seat properly. After tightening as much as I dared, there was still a gap of about 1/4" with threads showing. I have five other resonators (standard not super) that all work fine with the mast. Anyone have any thoughts on the subject?

Source record: 268838

Sorry for the intrusion, but I was wondering if anyone could email input on the University of Florida, in Gainesville. I read this group all the time and I figured I could reach a lot of people quickly this way.

I have an opportunity to study there this summer, particularly in the psych dept, and I would like input from anyone who studied/lived there, to help me make my decision. (what the campus is like, how big the school is, how close the campus is to the real world, about the city, Gainesville, anything about the campus would be helpful)

I will be unable to read this newsgroup this week, but I will have access to my email, so please email any responses to sjg@yar.cs.wisc.edu

Thanks much for your help.

>be reintroduced at the receiver. So you really need a phasing
>transmitter and phasing receiver to get "hi-fi" audio. Or

Like the Campbell R2 receiver, Jan. 1993 QST! For whatever combination of reasons, it IS a clean sounding unit. I'll bet his companion phasing SSB exciter sounds just as good.

>length, "this is" takes almost exactly the same time
>to speak regardless of the speaker. So much for that argument.

Well, I will indeed rationalize it that way.
I used to be the Net Manager of the Southeastern Michigan Traffic Net.
Adopting that procedure subsantially reduced doubling. Sure, some doubling
still occurs, but the smart operator tries to vary the length and timing
of his "this is" transmission, much like terminal node controllers use
random number generators to vary the retry times on collided packets.

A similar practice has been in place on cw nets for years: When a station
wishes to check in, he merely sends one morse character (instead of his
entire call), the NCS responds with the same character, then the station
is free to check in with his call sign.

Sorry to burst your bubble, but it really works.

Reference: Simplex, personal, cross-band repeat use of auto-patch.Is there any body out there with experience in setting up and using a personal autopatch configured to work via one's home station? I am considering adding a simplex set-up working half-duplex for personal use within amateur guidelines, of course, and would like to hear of any experiences along these lines. Drop me an EMail message and share your thoughts.

117. Looking for Kenwood TM-742a mods.

I'm looking for any and all mods. that can be done
on the kenwood TM-742A radio. I would like to know
also if this radio can receive the 800 band? and
if so how do I get it to receive it. you can e-mail
me the information at holcombe@camel.campbell.edu
and if any one knows if I can switch the bands around
so that I can have a set up of 6m 220 and 440, please let
me know.

Most of those larger boilerplate postings are also cross-posted to
rec.radio.info, so perhaps you could convince your news software
to not give you anything that's cross-posted to both groups.

The ARRL list is as complete as people send info to it, in general it has many of the larger events.....

The problem is that it is NOT maintained on the internet version.
^^^
The hard copy version of the list is updated ~ every 2 weeks, The updated version makes it to their packet BBS about as often. The internet server does not get updated. Last I checked it still had the November 93 version of the list. It seems they view the info resource as static information.

Ocassionally if I have some extra energy I e-mail the league and suggest they put a later version up. Mabey if enough of us ask often enough they might figgure out it should be updated as often as the packet BBS...

Ocean State Electronics in RI has them. 1-800-866-6626. I've never noticed the prices on such large coils before so I took I look just to make sure they have the big ones. Sit down for this: 6" dia., 10" long coils run from $151 to $177! 4" by 10" range is $110 to $115. And my catalog is 2 years old. The price increase from 3" and 4" sizes is fivefold, so if 3" dia. is enough you'll save a bundle.

The 3-Hr Ap Indices for 02 APR 94 are: 16 9 33 51 34 37 51 53
Greater than 2 MeV Electron Fluence for 03 APR is: 1.9E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. The disk remained spotless
for the second day in a row.

Solar activity forecast: solar activity is expected to
remain at very low levels.

At middle latitudes, the geomagnetic field has been at mostly active to minor storm levels with isolated periods of major to severe storm levels observed. High latitudes experienced mostly minor to major storm levels with some isolated periods of severe storm conditions. The storm conditions are believed to be a result of a favorably positioned recurrent coronal hole. The greater than 2 MeV electron flux reached high levels at 03/1845Z. (STD: Overall electron fluence levels were generally at moderate levels.)

Geophysical activity forecast: the geomagnetic field is expected to remain at mostly active to minor storm levels at middle latitudes and active to major storm levels at high latitudes. Isolated periods of major storm levels at mid lats and severe storm levels at high lats can be expected. Based on recurrence, these conditions are forecast for the entire period and can be expected to persist through 9 April.

Event probabilities 04 apr-06 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 04 apr-06 apr

A. Middle Latitudes
Active 30/30/30
Minor Storm 40/40/40
Major-Severe Storm 25/25/25

B. High Latitudes
Active 30/30/30
Minor Storm 40/40/40
Major-Severe Storm 30/30/30

HF propagation conditions became strongly disturbed over the high and polar latitude paths with the arrival of the anticipated geomagnetic storm. Strong fading and absorption along with heavy multipathing has degraded most transpolar and transauroral circuits. Conditions were generally extremely poor to unusable with frequent radio-blackout conditions for high and polar latitude signal circuits. Middle latitude paths have also been moderately affected with well below normal signal quality, reduced MUFs and strong levels of fading and absorption. Low latitudes observed near-normal propagation with occasional minor signal degradation bringing overall signal qualities within the good to fair range. Conditions will continue strongly degraded over the next 24 to 72 hours with very little improvements (particularly on the upper middle to polar latitude paths) expected over the next week.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 3/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 2 AND 3 APRIL AND FORECAST UP TO 6 APRIL

No IPS Daily Report could be issued yesterday due to
reasons beyond our control.

IPS Warning 10 was issued on 31 March and is current
for interval April 3 - 14 (coronal hole).

1A. SOLAR SUMMARY
April 2 and 3 Activity: very low

April 2 and 3 Flares: none.

April 2:
Observed 10.7 cm flux/Equivalent Sunspot Number : 079/019

April 3:
Observed 10.7 cm flux/Equivalent Sunspot Number : 077/016

1B. SOLAR FORECAST
04 April 05 April 06 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
April 2: Geomagnetic field at Learmonth: unsettled to minor storm
Learmonth K-indices: 3244 5555

April 3: Geomagnetic field at Learmonth: active to minor storm
Estimated Indices : A K Observed A Index 2 April
Learmonth 42 5455 4555
Fredericksburg 49 44
Planetary 68 34

Observed Kp for 1 April: 1222 2222
Observed Kp for 2 April: 3245 4555

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
04 Apr 45 Active to minor storm.
05 Apr 45 Active to minor storm.
06 Apr 40 Active.

2C. MAGNETIC COMMENT
Magnetic activity increased to active to minor storm levels
after 06UT on April 2. This activity is due to a coronal hole.
Further activity is expected until April 13.
3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
03 Apr normal normal poor-fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
04 Apr poor poor poor
05 Apr poor poor poor
06 Apr poor poor poor
3C. GLOBAL HF PROPAGATION COMMENT
Conditions are expected to be poor due to geomagnetic activity.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
April 2:
MUFs at Sydney were near normal until local dawn then depressed 30%
Observed T index for 02 April: 35

April 3:
MUFs at Sydney were depressed 15-30% during daylight hours, enhanced
15% during local night with spread F observed.

Observed T index for 03 April: 31

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
04 Apr 40 Near predicted monthly values.
05 Apr 40 Near predicted monthly values.
06 Apr 40 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Degraded HF comms have been experienced on the 3rd of April.
Further degradations in HF comms quality are expected during
local night and early morning tommorrow. Deep depressions
seem unlikely at this stage.

Scott,
You periodically post this messages announcing this availability,
and I always get rejected when attempting an FTP session! When/what time
of day would you suggest to try it? I've only tried while at work. The
system always tells me they already have 25 FTP connections currently,
and therefore my attempt is rejected.

Steve Hideg (hideg@spsd10b.erim.org) wrote:
: Someone on here said that "saying 73 without the s sounds stupid."

: To me, '73' is merely a code, or token that stands for something else.
: In this case it is "best regards", which is plural.

: I just make a simple substitution: '73' instead of 'best regards'. Is
: that too difficult to comprehend?

Welcome to the wonderful world of normal linguistic change!

No, everyone understands "73". And you can go ahead and use it without fear that the Logical Grammar police will start looking for you. No one is claiming that "73" means "best regard". But I don't think you understood that first post - they're arrayed in force against "73s". People stick the "s" for euphony. It sounds better. It's a normal linguistic development, it's commonplace, we all do such things all the time ("a norange" > "an orange", it's still "la naranja" in Spanish) and we all understand it. "73s" doesn't mean "best regardses", no matter how much deductive logic people use to show it (deductive logic only gets you so far in language), and it's not confusing or ambiguous. If you don't like it, don't use it. But if someone foregoes the simple substitution you happen to use, and says "seventy-threes" on a repeater, what's the big deal?

We're not going to wipe this one out. Let's focus instead on that "royal we", which makes far less sense and sounds really stupid. Or something. Code wars. Anything.

Language changes all the time, and that's normal. Is *that* too difficult for people to comprehend? Is "73s" really so offensive, or so unclear, that we have to discuss it every month? Or do that many people prefer "iced water"? (My wife drinks "ice water", which is terribly illogical - how can a liquid be a solid? and if it is, how do you drink ice? - yet no one from the "hypergrammar brigade" corrects her - well, not since last century, anyway. Personally, I drink iced tea. As for Ice T, I try to have nothing to do with it.)

128. Re: STOP SENDING HAMS ON USENET CRAP !!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-04 15:36:26 UTC
From: mark@ve6mgs.ampr.org
Message-ID: <1994Apr4.153626.24688@ve6mgs.ampr.org>
Source record: 268841

Anyone that thinks up a title like this wants a flame war or is a newby. I will not oblige, however, a sane individual asks:

teacherjh@aol.com (Teacherjh) writes:

>However, the best solution I can come up
>with would be to put the actual postings in one usenet group, and have a short
>message in all the others pointing to that usenet area (and an ftp site also)
>where they can get the info.

It is posted as *one* set of articles, cross-posted to four groups. It *is* effectively posted to one group, the pointer being the Cross-posting list in the Newsgroups: line.

>Maybe the same should be done for the FAQ
>lists... instead of periodic large postings everywhere, one periodic large
>posting in one newsgroup, and a short posting everywhere shoing how to get it
>from the newsgroup, and how to get it from an ftp site.

The cross-posting setup serves this purpose, the FAQs are but *one* each. Sounds like AOL has a broken news reading server and is showing you an incorrect picture of the actual news heirarchy associated with cross-postings.

>btw, where do they get the "hams on usenet" info? does somebody read evey post
>and look for a callsign at the bottom?

I get *overloaded* for the first two weeks with *add me's*, yes, a *lot* of people read it. However, this might be the `I wanna see my name in lights' syndrome, or it may be an actual altruistic desire to ensure that there is an accurate representation of all the hams available on these newsgroups.

I shortened the list to only use the last 9 months (now increased 12 months), and the massive set of updates I got increased the posted list back to it's original `last 4 years' size ... The list *truly has a life of it's own ...

The database is now half a meg in size (far from the 20K size it was in February 1990). The list is primarily collected manually to ensure accurate interpretation of the signatures.

What is the consensus *now* (about 6 months ago, I hinted at reducing the list, and possibly just not posting it because of the email server I have here for the list, and the answer was `leave it be'). The list belongs to rec.radio.amateur.*, you have several choices:

1) Post only changes, ftp and email server still function.
2) Post only a reminder on how to access the list from the buffalo.edu ftp site, and how to use the email server.
3) reduce the posted list to the last 3 months, leaving the full lists

as they are in buffalo.edu and on the email server in any case.
4) go on a volunteer collecting bynge, and set up regional postings of
the list (won't work because of the number of misconfigured sites
out there ... but it would make the collector of the list less of a
target ;-/)
5) leave it be
6) stop collecting the list (90/2->94/4 RIP)
7) give the list to someone else to provide a fresh outlook and more
options than I can think at this moment. An person with a long
USENET history and good ftp access an asset.

Please inundate my mailbox with votes as to which way we should go, in two
weeks, I will post the resulting straw poll of suggestions, and I will make a
random choice amoungst the poll as to what to do with the list ;-/

>Not sure how long sites normally keep message IDs so not sure if it would
>work.

Nope, the previous message ID will prevent it *ever* posting again. It uses
a standardized message ID which you can easily interpret, though. Also, by cross
posting it to rec.radio.info, it is also easy to set up your
rec.radio.amateur.misc reading (or news feed) to `!rec.radio.info' to filter it
out. It is the *only* posting in rec.radio.info using *my* personal email
address, all the other postings I moderate into rec.radio.info use the
submitter's address. If you have no kill file, or feed control facitilites,
I strongly recommend to you to `get a real system', or inform your toy BBS
sysop `To upgrade or die'.

For those people that do not understand, tell your news or mail listserver feed
site to do a !rec.radio.info if all you wish to read is the discussions in
rec.radio.amateur.* groups. We endeavor to ensure that all informational or
large or periodical postings are cross-posted to rec.radio.info. By having the
cross-posting key, the people on *long links* or expensive mail connections
can filter out the large postings, leaving you with your desired discussions.

Ciao -- 73 de VE6MGS/Mark -sk-

>maintaining the list isn't being appreciated and will decide to spend
>his time on something more rewarding.

I have far too thick of skin for this (although, this does not mean: I am not willing to listen).

But the question of rewards is not an issue, if I was so inclined, the shear quantity of email I get over the list of a positive nature is more than enough gratification ;-/. I have received in the past 4 years only three pieces of hate mail, one because he thought it was an invasion of privacy and I have hidden his entry as he requested, the other two much like the original poster of this thread not setting up his services correctly to kill the article from his view.

About once every six months, because of the growing size of the list, or because of some newby with an expensive email link posting some noise, I grumble in certain ears, or publicly at times, about whether the list is a bandwidth waster. I am grumbling again ... The consensus has been `leave it be' prior to this (however, some qualify wondering if it would be better with just a pointer posted considering there is an email server and an ftp site, their voices are drowned out, but considered at every juncture in any case).

As per not spending time on the list, `YES, I AM LOOKING FOR A REPLACEMENT', but not because of the lack of reward, but because after four years, it is time for a change. I am willing to continue looking after the list if *no* one else steps forward. I have been looking, privately for the past 4 months up until now, for a person willing to handle the list. The person *must* be an administrator of his own long term USENET connected site and a willing volunteer. Internet access would be good, but *I* do not have any, so certainly not a must. I take roughly 15 minutes to an hour (however, right after posting the list, I take up to four hours for the first three days) each night (I *never* let the list maintenance go idle for more than a week) looking after the list.

If you can find "stock" frequencies you can use in DigiKey or Mouser
catalogs, that's a lot cheaper way to go than the "custom" route.
International Crystal or Jan Crystals are two places that will do
custom crystals for you, in the $10 each price range (depends on frequency
and tolerance and if you need them in a big hurry). 1-800-ICM-XTAL or
1-800-JAN-XTAL.

On RTTY, the distinction between K and KN is normally respected. It is
not uncommon to have a large roundtable on RTTY and need to specify whether
you want a quick answer from someone (use KN) or want to pass along to
the next station and allow anyone else who wants to join the
group to do so.

In RTTY contesting it is a way to say "ONLY THAT STATION" when trying to
call one station out of a pile.

>
>and of course KN assumes that the person anxious to call is going to pay
>attention to that "instruction" anyway....

At least on RTTY, this isn't usually true... People are pretty polite.

FCC NEWS

Report No. DC-2582 ACTION IN DOCKET CASE April 4, 1994

COMMISSION AMENDS RULES CONCERNING MESSAGE FORWARDING
SYSTEMS IN THE AMATEUR SERVICE
(PR DOCKET NO. 93-85)

The FCC has relaxed the amateur service rules to enable contemporary message forwarding systems to operate at hundreds of characters per second while retaining safeguards to prevent misuse.

A message forwarding system is a group of amateur stations participating in a voluntary, cooperative, interactive arrangement where communications from the control operator of an originating station are transmitted to one or more destination stations via forwarding stations, which may or may not be automatically controlled.

Currently, the control operator of each station is held individually accountable for each message retransmitted, resulting in unnecessary content review and delays. The American Radio Relay League, Inc. (League) stated that the obligation of the control operator of the first forwarding station should be the establishment of the identity of the station originating the message. Only when this is not done should these control operators be held accountable for improper message content. Also, there are currently no central supervisory authority in an ad hoc amateur service digital network, making these unsupervised systems easy targets for misuse by uncooperative operators and non-licensees. Moreover, the Commission said that it could be difficult to establish after the fact that a particular VHF station originated a fleeting high speed digital transmission. For these reasons, the Commission said there must be on-going oversight of the system and the control operators of the first forwarding stations are in the best position to provide such oversight.

Therefore, the Commission will hold accountable only the licensees of the station originating a messsage and the licensee of the first station forwarding a message in a high speed message forwarding system. The licensee of the first forwarding station must either authenticate the identity of the station from which it accepts communications on behalf of the system, or accept

accountability for the content of the message.

The Commission also clarified that the station that receives a communication directly from the originating station and introduces it into the message forwarding system is the first forwarding station.

The League and the Colorado Council of Amateur Radio Clubs suggested that the Commission substitute the word "simultaneously" for "instantaneously" in the redefinition of a repeater. The Commission concurred and adopted this modification.

The Commission believes that these rule changes will enable contemporary high speed message forwarding systems to operate as their designers intended, while retaining the minimum safeguards necessary to prevent misuse.

Action by the Commission March 30, 1994, by Report and Order (FCC 94-76). Chairman Hundt, Commissioners Quello and Barrett.

QST de W1AW
Propagation Forecast Bulletin 13 ARLP013
>From Tad Cook, KT7H
Seattle, WA April 2, 1994
To all radio amateurs

SB PROP ARL ARLP013
ARLP013 Propagation de KT7H

Solar flux is dropping. This week saw it dip below 90. In a few days it should start increasing again to peak near 105 around April 9. Then it should drop back to current levels about the third week in April.

For the next few days expect increasingly disturbed conditions due to a recurring coronal hole. The worst conditions are predicted for April 5 and 6, but stormy conditions will probably last through the middle of the month, quieting down gradually.

For the long term, the NOAA Space Environment Service Center has released some new observations for the rest of this cycle and the start of the next. They note that sunspot cycles are not exactly 11 years, but vary around a mean of 10.2 to 11.8 years. A short current cycle would put the minimum around late 1996. A long cycle would end in late 1999. Another clue is a theory that places the solar minimum for any cycle about three to five years after the first spotless day following the peak of the cycle. That day occurred last fall, so the minimum should be some time from late 1996 to 1998.

Sunspot Numbers from March 24 through 30 were 46, 56, 39, 41, 32, 23 and 48, with a mean of 40.7. 10.7 cm flux was 92.7, 90.9, 88.5, 88.4, 87.6, 86.1 and 86.3, with a mean of 88.6.

The path projection for this week is from Tuscaloosa, Alabama to Yemen.

80 meters looks good from 0030z to 0230z, and 40 meters from 2330z to 0330z. Check 30 meters from 2300z to 0130z, and again from 0300z to 0415z. 20 meters should be good from 2030z to around sundown on the U.S. end, and 17 meters from 1800z to sundown. 15 meters does not look promising, but check from 1800z to 2130z. Openings on 12 and 10 meters look very unlikely, but are most likely in the afternoon.

Source record: 268858

From the newspaper USA TODAY

The government announced expansion of its Weather Radio to include all types of disaster warnings, and to increase coverage to 95 percent of Americans, up from 75 percent now. Vice President Gore said the weak link in Sunday's storms, which killed at least 43 people in the Southeast, was the inability to get the word out.

<Currently all watches and warnings are preceeded by a 1050 Hz tone to activate receivers that have decoders; a 567 IC makes an easy-to-built decoder. Bcsts are in the 162 MHz range. Jeff NH6IL>

146. Correct Address for OK1IA (OM1IA?)

I am trying to locate the correct address and / or phone number
for OK1IA (now OM1IA ?) , Pavel Horvath. His Callbook address
- P.O. Box 44, Bratislava, Slovakia no longer correct.

He is the QSL manager for 3W8VL. I recently sent a registered
letter to the Callbook address listed above. The letter was
returned 6 weeks later from Slovakia stamped "Jedotlivo kartovane"
and "Retour". I am guessing "retour" means return and "jednotlivo
kartovane" might mean 'no longer at this box' . Is this correct ?

If you have a QSL from either OK1IA, OM1IA or 3W8VL or other
information on how to contact Pavel Horvath or others regarding
a 3W8VL QSL card, please contact me.

Many thanks,

On Sun, 3 Apr 1994 08:17:17 GMT, Uncle Dave (dev@armory.com) writes:
> i know this subject comes up every so often, and if it's in teh
> faq, then i didn't look carefully enough, but what's the deal on
> operation of ham radios on a plane?

Okay -- here's The Deal (tm): According to the FCC, you can operate your amateur radio anywhere you want (including on an airplane), but they point you to the appropriate FAA rules. (Vague paraphrase of Part 97)

The FAA has more serious words on the subject (and I quote)

FAR Part 91.21 Portable Electronic Devices

(a) Except as provided in paragraph (b) of this section, no person may operate, nor may any operator or pilot in command of an aircraft allow the operation of, any portable electronic device on any of the following US-registered civil aircraft:
(1) Aircraft operated by a holder of an air carrier operating certificate or an operating certificate; or
(2) Any other aircraft while it is operated under IFR.

(b) Paragraph (a) of this section does not apply to --
(1) Portable voice recorders;
(2) Hearing aids;
(3) Heart pacemakers;
(4) Electric shavers; or
(5) Any other portable electronic device that the operator of the aircraft has determined will not cause intereference with the navigation or communication system of the aircraft on which it is to be used.
(c) In the case of an aircraft operated by a holder of an air carrier operating certificate, the determination required by paragraph (b)(5) of this section shall be made by that operator of the aircraft on which the particular device is to be used. In the case of other aircraft, the determination may be made by the pilot in command or other operator of the aircraft.

End quote -- begin interpretation & explanation

Applications
1) If your buddy takes you flying in his PA-28R, you can
get his permission, as Pilot In Command to operate your kilowatt
2m station, if he determines that doing so will not interfere with
his communication & navigation equipment.

2) If you're flying to Florida on AirWorst Airlines, you may NOT
operate any transmitter or receiver ever. The pilot does >NOT<
have the authority to allow such operation. (See FAR 91.21 (c) --
The important definition is "operator" which is NOT PIC)

3) Some day, perhaps, HamFriendly Airline will acquire an operator's
certificate, and offer a while-you-wait TSO program <g>, in which
case the Operator (license holder) CAN authorize the operration of
your portable electronic devices. But don't hold your breath.

Two other things:

Believe this. I once took some various RF gear aloft with a
friend, and we evaluated the effect of operating the gear on VOR
reception: A cheapie R/S 'Listen to the airplanes' receiver, when
tune 10.7 Mhz below San Jose VOR, succeeded in dropping a red
flag, indicating loss of signal, from about seven miles out.
The IC-24 dual-band HT had no effect during receive all across the
2m and 70cm Ham bands. During 2m transmit, it caused considerable
needle wobble on the VOR. Operating the R/S Airband receiver
while close to the airport (on final) caused about 40 degrees of
error on the VOR signal. All of these tests were conducted while
operating VFR, of course.

Under no circumstances should you operate a cellular mobile
telephone while aloft. The frequency reuse only works (and I use
the vaguest sense of the word "work") when your car stays on the
ground. Going up to 5,000 feet would cause your signal to swamp
every cell-site in a major metropolitan area, and is expressly
forbidden in the appropriate FCC regulations.

However, I don't believe there is any such prohibition against
Sensible Mobile Telephone Service (IMTS). I don't have the
appropriate parts, so I don't ACTUALLY know, but I -- errrr -- an
anonymous friend has gotten great signals out of the San Jose
terminal as far south as San Luis Obispo.

>Are there any operators/groups that have interfaced weather
>intruments to provide wind, temp, etc. info?

Yep. APRS (Amateur Position Reporting System) by Bob Bruninga (WB4APR) software has it as an option along with GPS, Loran C, and direction finding info. The weather station used is the Ultimeter II from Peet Bros Company (800)USA-PEET. About $180. The software is available as APRS403b.ZIP and XTRA403.ZIP on oak.oakland.edu, ucsd.edu, or bbs at (410)280-2503.

APRS software provides a map display of packet stations lat/long position along with whatever information is broadcast (bearing, weather, comments). Weather reports are broadcast as beacons. Inquiry capabilities are built it to get the latest reports. There are enough features to keep one busy for quite a time just discovering how it works and what can be done. It's very impressive. Here in Santa Cruz, we've been playing with APRS for about 2 months and are setting up an automated DF system.

Note that the disribution software is shareware and requires a $19 registration plus $9/ea for GPS, LORAN, WX, and DF routines. Discounts for club orders of 10 or more.

154. Mount Athos and Cyprus

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-04 22:25:30 UTC
From: sv1cec@sv1cec.ampr.ORG
Message-ID: <166@sv1cec.ampr.org>
Source record: 268866

To : All Radio Amateurs
The DXCC commitee
The DXAC commitee

Gentlemen,

A recent "Proposed Vote for Schedule" has been announced by the DXAC Chairman, which includes the topics of Mount Athos Deletion and acceptance of the pseudo-state of the occupied part of Cyprus, in the DXCC list.

It is quite clear to us and probably to every greek radio amateur, that the above proposal, sounds like a blackmail effort or a threat. It can easily be translated to "make SV/A active again, or we delete it, and add the pseudo-state instead", or even to "behave or you will be punished".

We would like to remind to Mr. Chairman, as well as any one else behind these proposals, the followings :

- The pseudo-state that you propose to accept as a DXCC country has resulted from the unprovoked invasion of the Turks military forces in Cyprus, in 1974. It is therefore a result of a violent act, from one country against another. Are you gentlemen of the DXAC commitee going to appraise and encourage such acts, by proposals like the one mentioned above?

- Are you aware gentlemen, that the northern part of Cyprus is still - since 1974- under armed occupation, by the Turkish Armed Forces and that there are still homeless people, forced to abandon their properties and home land? We very well remember that some years ago, when Iraq invaded Kuwait, an international force was assembled to liberate the occupied country. Of course, such a force was never assembled for Cyprus, but then again, Cyprus is not producing any oil. This however does not give you, or anybody else, the right to create a status quo, with stupid proposals, like yours.

- The pseudo-state gentlemen, has not been recognized by any international organization (like UN or EC) or by any other country, except of course Turkey. Are you gentlement going to replace these international organizations in their role, or your real intentions are to exercize pressure to these organizations to recognize countries according to your (hidden, possibly financial) wishes (or interests)? Also, are you aware that there have been several appeals to the UN against Turkey, and that Turkey has been condemned by the UN for its acts? Are you encouraging Turkey's acts by your proposals?

- The DXAC, the DXCC and all other radio amateur organizations, as well as radio amateurs themselves, have to stick to the rules of amateur radio, as they are defined after years of ham activity. One of the most

basic rules of our hobby is that amateur radio stays clear of politics or personal financial interests. How can it be then, that you are currently taking part in a very old debate between Cyprus and Turkey? Is it possible that financial reasons are behind your proposals?

- The Mount Athos gentlemen is not just a banch of "mounts". It is a holy area of the Romanian, Yugoslavian, Russian, Bulgarian and Greek churches, or even better put, of the whole Christian Orthodox world. Mount Athos is entirely populated by monks, and Apollo is the only monk in the whole world who is an active radio amateur (at least from what we are aware of). When Apollo stopped its DX activities, a lot of hams around the world complained and urge him to repeate them. Now gentlemen, you are proposing the deletion of SV/A from the DXCC list. Of course, this is not the first time that you are making such proposals, maybe because you consider yourselves authorised to decide on subjects affecting everybody in our hobby, without asking anybody's opinion.

As far as we are concerned, dear fellow hams, we promise you that if these proposals are ever voted, we will stop all DX activities, and will encourage other Greek hams to do the same, so that the SV prefix becomes as rare as the SV/A is today. Then again, the DXCC commitee might very well delete SV from their list, but we certainly do not care to be part of a list created by ignorant, politically influenced mappets.

I totally agree. Even more aggravation is listing these huge directories of
ham radio files. Both of those psot toally violate netiquette. These belong
in a data base at some location with a pointer. This newsgroup is the only
one I have seen that has this type of post happening consistently. The
format of the hams on usenet is not even very good. The directory listing
is not too useful because it has very little descriptive information. I set
a private message to the directory lister but never got a reply.

In article <2mst02$beg@ratatosk.uninett.no>, tomrune@mac_inge (Tom Rune Lauknes) writes:

Tom... I'll send you a list of all of the Mac Amateur Radio software that I am aware of under a seperate e-mail!

ZCo must be out of business! I have not been able to reach them either and I am right across the boarder in Massachusetts.

Here is the contest software I am aware of:

*** Logging ***
<Ham Radio Station Logbook>
HyperCard stack that stores and displays radio contact information. Automatically stamps entries with time and date. Contacts can be sorted by frequency, call sign, or date of contact. Includes report formats, a "Q-code" reference list, and on-line help. SanSoft, 892 E. Quail Place, Highlands Ranch, CO 80126. (The same program appears to be available from Heizer Software, 1941 Oak Park Blvd., Suite 30, Pleasant Hill, CA 94523.)

<FDLog!>
Contact logging and duping program. Can transmit any of ten programmable CW messages. Generates real-time statistics on QSO rates. System One Control, 3900 85th Ave N, Suite 200, Brooklyn Park, MN 55443.

<MacContest 4.0>
The ultimate contest logging program for the Macintosh (System 7 proof). Covers CW/SSB/RTTY modes and all bands from 1.8 MHz to 5.7 GHz. Allows real-time or post contest logging for a wide variety of contests (30 contest include, new ones can be added). Checks for dupes, figures scores instantly. Offers various printouts (sorts per band, alpabetically, labels etc.) Interfaces to TNCs (KAM, PK-232) for CW, RTTY and packet modes. Built in terminal mode and packet DXcluster interface. Interface to Kenwood transceivers for automatic band/mode logging. MacinTalk voice output for real-time logging as well as to ease post-contest entry. Option to capture log in realtime to printer. Option to simultaneously create a save copy of the log to a different file/drive. Timetable showing actual grayline on a world map.
MacContest is free but must be personalized to each user (otherwis it's limited to 50 contacts). To get a copy send a 3.5" diskette and a SASE to Gerald Eberle, HB9CEY, PO Box 13, CH-4417 Ziefen, Switzerland.
Moritz (HB9BLZ) can act as a message forwarder for Gerald. Moritz' e-mail

address is: gysslerm@saturn.kau.roche.com

<LOGic>
(Macintosh version scheduled.) Lets you define the rules
determining dupes (such as once per band or once per contest).
Displays heading, distance, and other information about the country
being worked. Automatically enters contact time; if interfaced
directly to a radio, also enters the frequency, band, and mode.
Shows status toward earning amateur-radio awards. User-definable
database fields. Exchanges data with other programs. Personal
Database Applications, 2634 Meadow Bend Court, Duluth, GA 30136.

<HF Logger 1.2>
A real fine HyperCard logging program! (hey... thats all I got!)
N0QGQ

<Simple Log .2b>
This little utility is a handy way to create a logging file that
you can later import into any data base for analysis, etc. It also
shows you that just about anyone can use Think C and create
something on the Mac! Let me know if you'd like the source code.
WD1V @ WA1WOK.NH.USA.NA Author is John Seney - WD1V, e-mail address
is jseney@aol.com. For a copy of this program, mail a SASE disk
mailer and 800K disk to: John D. Seney, WD1V, 144 Pepperidge Dr.,
Manchester, NH 03103
System 7

<Marathon>
Contesting/logging- Have seen references to (March 92 CQ magazine)
and heard good things about MARATHON by N 0 IOS. I believe a demo
was available for $8. Last address known is: Kevin Krueger, N0IOS,
1780 Ruth St., St.Paul, MN 551O9

Hope this helps

David Hough (dave@llondel.demon.co.uk) wrote:
: Why not use a Weaver (Third Method) exciter? It is easy to generate a couple
: of 1800Hz carriers which are 90 degrees out of phase, and fairly easy to
: generate a couple of 10.7MHz carriers which are 90 degrees out of phase, and
: the rest is reasonably straightforward without any expensive bits. SBL1 mixers
: are cheap, so the fact that you need four shouldn't be prohibitive.

For some reason, the "third method" of SSB generation invented by Weaver has never caught on. Perhaps part of the reason is the fact that the suppressed carrier comes out right in the middle of the audio passband. Even with 40 dB of carrier suppression (typical with diode balanced mixers), people might find it objectionable because of the AGC action of typical SSB receivers. (Which would make the carrier "pop up" during speech pauses.)

I have often thought, though, that the Weaver method would be well-suited to implementation in a DSP, since you can get mathematically perfect carrier suppression.

SYNOPSIS OF ACTIVITY

Solar activity was very low with no significant activity
reported. The disk remains spotless.

Solar activity forecast: solar activity is expected to
remain at very low levels.

The geomagnetic field has been at unsettled to major storm levels for the past 24 hours. The storm conditions are believed to be a result of a favorably positioned recurrent coronal hole. The GT 2 MeV electron flux generally remained in the moderate range, becoming high about 04/1400Z.

Geophysical activity forecast: the geomagnetic field is expected to remain at mostly active to major storm levels with overall conditions expected to gradually decrease after the forecast period.

Minor Storm 40/35/35
Major-Severe Storm 30/25/25

HF propagation conditions were moderately to strongly degraded throughout most of the UTC day. High and polar latitude paths were essentially wiped out with useless propagation. Planetary peak A-indices in the severe storm category were associated with heavily depressed propagation quality through the high and polar latitude regions, extending even into the middle latitudes today. Fair to occasionally very poor propagation was reported over most middle latitude regions. Conditions began improving over the middle latitudes late in the day. Low latitude paths were slightly below-normal. No significant improvements are expected over the next 3 days. Night-sector propagation will remain the hardest-hit regions with possible frequent substorming continuing.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.info

/\

POTENTIAL SATELLITE ANOMALY WARNING

ISSUED: 02:30 UT, 05 APRIL

/\

ATTENTION:

The recurrent disturbance which, over the last 3 solar rotations has
been responsible for elevating levels of energetic electrons at greater
than 2 MeV, began returning around mid-day on 03 April. Today, levels
of energetic electrons became high and have remained moderately high
since approximately 12:00 UTC. High to very high levels of energetic
electrons (with densities near and above 1.0E+05 el/cm^2-sec-ster) can
be expected over the next week with diurnal maximums near local noon at
geosynchronous altitudes. The enhanced electron densities may be
sufficient to produce charging-related satellite anomalies.

Additional updates will be posted as necessary.

** End of Warning **

sv1cec@sv1cec.ampr.ORG (John Caradimas) says:

A recent "Proposed Vote for Schedule" has been announced by the DXAC Chairman, which includes the topics of Mount Athos Deletion and acceptance of the pseudo-state of the occupied part of Cyprus, in the DXCC list.

It is quite clear to us and probably to every greek radio amateur, that the above proposal, sounds like a blackmail effort or a threat. It can easily be translated to "make SV/A active again, or we delete it, and add the pseudo-state instead", or even to "behave or you will be punished".

(the rest deleted to conserve space and blood pressure)

Are other SV hams allowed to operate from Mt Athos? It seems to many of us that the current problems and hard feelings could be helped a lot by a serious mini-expedition by a group of SV ops getting on the air from SV/A. That way, everyone would feel more kindly towards the SVs and SV/A itself. If only one person is ever allowed to operate from a DXCC country, whichever one it may be, there will probably always be hard feelings.

I'm sure there has been activity from SV/A by other ops in the past, and I hope there will be some in the future, regardless of their nationality.

A shame really, because most of your signal imperfections exist in your
own passband, instead of clobbering adjacent channels like the other
methods do. Hmmmmm.

>I have often thought, though, that the Weaver method would be well-suited
>to implementation in a DSP, since you can get mathematically perfect
>carrier suppression.
>
Not sure if it is the most efficient way though, and you are limited in your
output frequency - or were you only thinking of doing the audio stages in the
DSP and converting the 'mixed' output back to analogue for injection into
the RF mixers?

I still see no reason whatsoever for the first BBS to be held accountable. It makes no sense at all. Why should anyone, other than the originator, be held accountable for his actions? He wrote it, he should take the lumps for it. If he uses someone else's call, track him down, like any other mode.

Gary

In article <$arlz05.1994@ampr.org>, Marc B. Grant <marcbg@netcom.com> reposted from the FCC:
>The licensee of the first forwarding station
>must either authenticate the identity of the station from which
>it accepts communications on behalf of the system, or accept
>accountability for the content of the message.

This is about the best that we could have gotten, given that the FCC demands the ability to exact retribution on _someone_.

They've made it easy for even the first forwarding station to get out of having to monitor every message, though: Notice the bit about authenticating the identity of the originating station? This tells me that, once a practical authentication protocol is implemented, the responsibility is placed squarely on the shoulders of the originator, where ti belongs. This would most likely require validation of local BBS users, but that situation is very common in the landline BBS world, and it's stated policy among nearly all Internet providers that the identity of users of Internet-connected systems must be validated as well.

BBS authors, here's your chance.

The FCC document posted made fleeting reference to the difficulty of
authenticating messages.

>If he uses someone else's call, track him down, like any other mode.

A one-time post under a fake call is going to be extremely hard to
trace. My job is in networking -- I've traced e-mail forgeries other
our local net and the Internet. It is difficult. In amateur radio,
the problem is worse because of the mobility of hams.

Without the use of cryptography, it is hard to build a strong way to
authenticate message senders over packet radio. Thus it is necessary
to find a ham who can be traced and held accountable for messages,
and this is the BBS operator.

No, I don't entirely agree with the logic. I am only explaining it.

> station (PASS.. joy) and I don't think many people subscribe to it..

Contact your local cable company. I'm sure they'd be VERY interested in hearing that their cable is leaking signal. Just tell it to them the same way you told us... you can hear it on 145.25. Cable channel 18 runs from appx 144.0 to 148.0 MHz so you're in the general ballpark.

In addition, 2m transmissions WILL interfere if there's leakage on the cable.

If the cable company should ignore your helpful comments then it's time to notify your local branch office of the FCC. They'll take a rather intense interest in the matter.

The implication is that if the originator cannot be tracked down, I will get the blame for his message. That is neither fair, nor legal. I don't believe it would stand up in court. A one time offense WOULD be hard to trace...but then why try. If it happens more than once, it is a problem. It's like the occasional slip of the tongue, or any other one time offense. It happens. So what. That doesn't mean it is "okay". It just means that it is one of those times that it happens and nothing can be done about it. On the other hand, the repeat offender is going to be easier to find and filter. Let's face it, ANYONE can put someone else's call in his TNC and say whatever he wants. That doesn't mean that SOMEONE ELSE should be made responsible for his actions when no one knows who it is.

This is a bad rule. It should be beat to death! I think the ARRL has once again let us down. As many before me have asked, where are they when they are needed?

I just realized, this has a perfect parallel. If the person who shoots someone bought his gun by using false information when filling out his gun registration, should the dealer be held responsible? I think not. Yes, some idiot relative, looking for revenge, will suit, but the dealer didn't break any law by using what information he was presented with to sell the gun. If a station presents me with his call, who am I to question whether it is his or not, unless it is obvious?

The real question is, what is your purpose (not you personally, I know you didn't agree either), to make SOMEONE pay for the offense, or to FIND THE OFFENDER AND PREVENT IT FROM HAPPENING AGAIN? The answer is obvious, and blaming the sysop will not accomplish it.

73, Gary

Has the FCC actually said this? I hadn't heard, and I thought the entire reason for not printing a new license was that it would make too much paperwork and slow everything down. However, I would be interested in knowing for sure...(and not just some guesses because of the new 610)

Sure,
For VHF Packet you will need a Data terminal Emulator, i.e. a dumb terminal, pc running terminal software..., A Terminal node Controller (TNC) and a 2 meter FM Transciever. You can get away with a reciever if you only want to monitor ;-(

For an IBM PC user, a cheap entry is a Tigertronics Baypac Modem and a second-hand 2-meter HT. The tigertronics unit works fine and is about $50 new. A full bore tnc like the kantronics KPC-3 is about $120. The 2 meter HT will do the job, but more power and better rx may be lurking in yer wish list shortly. Try your local (?) ham shop for swap.

The Tigertronics unit runs the AX.25 code in RAM, as opposed to a regular TNC running it on an EPROM or Rom.

Either way, have a blast.....are you licensed?

good luck de n1qdq

183. CDE antenna rotor

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-05 16:46:24 UTC
From: nat@kpc.com
Message-ID: <1994Apr5.164624.18948@kpc.com>
Source record: 268895

Hi,
I bought a CDE antenna rotor at a hamfest last year. The rotor is
fine but the controller seems to be flaky when I try to point the antenna
between N and West. Here are the details from the back of the controller.

Model AR-33 115 V.A.C
60 cycle 1 Amp
Mfd by
Cornell-Dubilier
Electronics Div.
Federal Pacific Electric Co.
Fuquay-Varina, North Carolina.
Patent No. 3.043,998

Series 1820.

The terminal strip has 5 wires. If anybody has a copy of the schematics
of the controller I'd like to get a copy of it. Could some knowledgeable soul
explain how the 5 wire system works. I opened the controller and the
position dial is nice wire wound resistor of 1K ohm resistance which has
been hooked up as a variable resistor and not a potential devider. There is
a large capacitor across terminal 1 and 5. There is a transfromer with a
center tapped secondary. The outer terminals are connected to terminals 2 and 4.
Voltage between one of the outer terminals and the center tap is 14.2 volts.
The center tap is connected to a ground trace on the circuit board.

Is the controller setup as a bridge where the dial in the controller
is one of the arm and a similar dial up in the rotor is the other arm.
The rotor stops moving when the 2 arm gets balanced. Any information will be
of great help

Sincerely
Nat.

A friend of mine is trying to make a MFJ 9600 baud modem work with his
IC-471. He has figured out how to get the receive audio, but he can't
find where to put the TX audio. He tried tapping directly to the varactor,
but that kills his power output.

There is supposedly a mod somewhere for this. If you have it (or know where
it is) could you please mail it (or its address) to me?

thanks and 73!

-->On Sun, 3 Apr 1994 08:17:17 GMT, strange alien beings caused Uncle Dave (dev@armory.com) to write:
-->> now, of course i'm not silly enough to try to operate my HT on
-->> a commercial plane, since the chance of being able to talk to
-->> the pilot is about nil, and they'd probably say no anyways,
-->> but as far as i can tell, if it's a private pilot, and they
-->> don't think it will interfere with the avionics (easy enough
-->> to test on the ground, or briefly in the air, it's cool to
-->> use yer radio if you want.
-->
-->There is an additional requirement that if the plane is flying under
-->IFR flight rules, it must be above 10,000 feet.

Incorrect.

You can fly under IFR (Instrument Flight Rules) at any altitude.
Many times it is foggy below 10,000 feet. Maybe you meant to
say that if you are OVER 10,000 feet in the Continental Control
Zone, you must be IFR.

-->
-->> anyone know where the official rules on this might be found?
-->> the FCC rule book? the FAA's version of a rule book? i'd just
-->> like to be able to point to some "official" document that says
-->> yea, nay, or depends.

This topic keeps cropping up.

It is illegal to use your HT on a commercial flight even if
the pilot says you can. 99% of the time commercial flights
are under IFR and according to the FCC regs, you cant operate
your HT under IFR conditions. Anytime the aircraft is
in the Continental Control Zone, it is under IFR by definition.

I still think it is a good idea to carry one onboard. If
you are in an accident and do survive, you may have the only
working transmitter. Yeah, it's far fetched I know.

Gee, maybe I can make autopatch calls from the bathroom on my FT530
instead of those expensive Airphones.....

While reading this week's copy of Network World (dated March 28th), I noticed on page 58 a table showing the comparisons between the various proposals for global satellite communications. One which caught my eye was the proposal by Bill Gates (a'ka Mr. Microsoft) and McCaw to use 840 (yep, 840) low-orbit satellites using frequencies in the 28mHz range. This compared to Irridium (66 satellies in the 1.6 Ghz range), and Globestar (48 satellites in the 1.6 Ghz range). Interesting proposal... but I doubt whether it would get approved by the WARC.

I've been listening to both 75 and 40 for some time and I'm amazed by
the informal bad grammar that seems to be completely normal to the
user.

For example when he saw something last week, " Well I see it last time too"
The word doesn't dosen't exit, " He don't need a new michrophone"

What ever happened when these people learned? English!
Ofcourse, you can tell right away that these guys aren't too well
educated. But, I'm still wondering how such poor English can be acquired
when almost all broadcasting and newpapers does not indulge in such
flights of misuse.

It is said that in the USA WE SPEAK ENGLISH... well, I've heard some
JAs and many Eurpeans do better with English as a second and third
language as 60% of American hams can do with it as their first.

: > into everyones channel 18 in about a half mile radius. Noone has really
: > complained to the cable company yet, probably because here it's a pay
: > station (PASS.. joy) and I don't think many people subscribe to it..

: Contact your local cable company. I'm sure they'd be VERY interested in
: hearing that their cable is leaking signal. Just tell it to them the same
: way you told us... you can hear it on 145.25. Cable channel 18 runs from
: appx 144.0 to 148.0 MHz so you're in the general ballpark.

The ARRL has a reprint of an article about this that was published
in Communcations Technology, the Journal of the Society of Cable
Television Engineers. Send a large-size SASE with three units
of postage to the ARRL Technical Department Secretary, 225 Main St,
Newington, CT and ask for the "EMI/RFI - CATVI" package. Your cable
operator will recognize this publication. It is not available
electronically, I am sorry. The ARRL Book -- Radio Frequency Interference
-- How to Find It and Fix It also has a section on CATVI.

: In addition, 2m transmissions WILL interfere if there's leakage on the
: cable.

A TV signal needs about a 40- to 50-dB signal to noise ratio. A small
leak can be enough to cause interference. If the cable operator insists
he doesn't have to worry about leaks in, tell them to look up
FCC regs 78.605, the regulations about required performance in the
cable system. This section specifies a minimum 51 dB carrier to coherent
disturbance and 40 dB signal to noise ratio.

: If the cable company should ignore your helpful comments then it's time to
: notify your local branch office of the FCC. They'll take a rather intense
: interest in the matter.

The key word is probably "Cumulative Leakage Index." This is hte
annual leakage test the cable company must pass. If anything, they
should be glad that hams are willing to help them find the leaks.

After you have read our interference packages and book, contact me here at HQ if you need any help finding a resolution. I do have a few low friends in high places at TCI, if that is the franchise. Yuo may be better off dealing directly with the Service Manager or system engineer; the repair crews don't usually understand the issues.

(PS - Hi, Tony!)

200. Conn. Commission: ARRL Discriminates Against Gays

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-05 20:35:53 UTC
From: an87806@anon.penet.fi
Message-ID: <204315Z05041994@anon.penet.fi>
Source record: 268917

(Following is the text of a press release issued by the Lambda Legal Defense and Education Fund, Inc. on April 1, 1994).

CONNECTICUT HUMAN RIGHTS COMMISSION TAKES FIRST STEP TO STOP DISCRIMINATION AGAINST GAY HAM RADIO CLUB

(New York, NY, April 1, 1994) In one of its first rulings under Connecticut's law against sexual orientation, the Connecticut Commission on Human Rights and Opportunities announced that it had reasonable cause to believe that the American Relay League (ARRL) had discriminated against a gay ham radio club when it refused to publish the gay club's notices in its classified advertising section.

In its March 18 decision in a case brought by Lambda Legal Defense and Education Fund, the Commission affirmed the case investigator's finding that ARRL's refusal to publish the Lambda Amateur Radio Club (LARC) ad was motivated by the club member's sexual orientation. Rejecting the ARRL's defense that it excluded LARC's ad because the group is "issue oriented," the Commission held that "the issue in this instance is clearly the fact that LARC's members identify themselves as Gay."

"The Commission's ruling illustrates that Connecticut's law against sexual orientation discrimination will be a significant tool in stopping anti-gay acts," said Lambda staff attorney Suzanne Goldberg who represents the club along with Robert G. Miller, John Lynch and Catherine McGrath of the New York law firm Brown Raysman & Millstein.

While the ARRL has refused to publish LARC's ad for nearly ten years, it has continued to publish classified advertisements for other ham radio clubs including Jehovah's Witnesses, Ayn Rand enthusiasts, missionaries and animal rights groups. "The ruling is an important first step toward achieving just treatment for the Lambda Amateur Radio Club," said Goldberg.

"It is time for responsible individuals at the ARRL to publicly acknowledge the unfairness of their past practices, adopt and publish a non-discrimination policy which includes sexual orientation, and to work with LARC in the spirit of cooperation and good will which has always characterized the amateur radio service," said LARC president James Kelly.

A full hearing on the case is scheduled for June.

Lambda Legal Defense and Education Fund is the nation's
leading non-profit legal organization working to protect and
advance the rights of lesbians, gay men, and people with
HIV/AIDS. Headquartered in New York City, and with offices in Los
Angeles and Chicago, Lambda has regional and national expertise
in all aspects of sexual orientation and HIV-related policy and
law.

-END PRESS RELEASE-

The Lambda Amateur Radio Club is an international ham radio
club which offers club membership, benefits, and a sense of
community to gay, lesbian, bisexual, and transgendered
individuals and to all individuals who are supportive of sexual
minorities and who share a common interest in amateur radio. LARC
promotes friendship and good fellowship; provides mutual help and
support to members; conducts an ongoing outreach program(s);
provides public service; and promotes the Amateur Radio Service.
The only requirements for membership in LARC are a positive and
supportive attitude toward all members of sexual minorities and
an interest in amateur radio. LARC does not discriminate on the
basis of race, color, sex, age, religion, national origin, sexual
orientation, marital status, or disability. This policy extends
to all policies, procedures, and activities of the organization.

gdavis@griffin.emba.uvm.edu (Gary Davis) says:

>>Subject: Hams should learn English

Well, let's see what we have here:

>>The word doesn't dosen't exit, " He don't need a new michrophone"
^^^^^^^ ^^^^ ^^^^^^^^^^^

Hmm, 3 spelling errors in one line is not encouraging.

>>I'm still wondering how such poor English can be acquired
>>when almost all broadcasting and newpapers does not indulge in such
>>flights of misuse.

"indulge in flights of misuse" is a pretty convoluted
expression, pardner. First time I ever heard it.

Further, "newspapers" is plural, and should be followed
by "do not", rather than "does not".

>>I've heard some
>>JAs and many Eurpeans do better with English as a second and third
>>language as 60% of American hams can do with it as their first.
^^

This is a terrible sentence, although it helps it you replace
"as" with "than".

Judge not, lest ye be judged, eh?

I think we both agree that the standard of spelling and grammar is
not very high in the everyday world, although if you are going to
complain about it you should take a little more care with your postings.

I don't think the problem is one found only among hams, though. In
the days when I read rec.radio.amateur.policy, it was remarkable that
nearly all the postings complaining about the Morse code requirement were
written by people who apparently dropped out of kindergarten, judging
by their spelling and command of language. That doesn't mean that
knowing the code improves your spelling, but it must mean something.

Checks spelling, exits left -

204. woodpecker signal

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-05 22:19:52 UTC
From: gardner@physics.ubc.ca
Message-ID: <2nso68$srd@nntp.ucs.ubc.ca>
Source record: 268921

Has anyone recently heard any woodpecker signals lately.
The reason I ask is that I monitored such a signal in 1991.
I've not found anybody who knows what may be going on with it
with regards to the ending of the cold war. I got into the habit
of monitoring it years ago when suddenly around the first week of
Dec. 1989 the signal suddenly stopped. Almost exactly a year later
I suddenly noticed a pulse type signal, only it had a much higher
pulse repetition rate. I knew it was a woodpecker type transmission
because a times the signal would revert back to its old repetition
rate. At the time I thought that such a signal should be expected
because I read that the russians were busy upgrading the system.
A higher pulse rept. rate would mean better imaging etc.
The activity of the new system seemed to increase as 1991
progressed and then peaked around Nov. 4 1991. Suddenly, after
this specific date it stopped completely and I've not heard it
since! The new system still had most of the features of the old
system...Very wide band width, very powerful, same origin
(Far east) and a 10.5 ionosperic pulse testing signal. To
elaborate on the last point, the old system (for the western
US) used to have four continuous signals that would periodically
change frequency depending on the signal conditions while a
fifth noticeably different sounding woodpecker signal would
travel up the HF band stopping a arbitrary frequencies. This
traveling signal, I think, was used to check for the optimal
frequency at which the other four woodpecker signals could
transmit at. In the new system this same traveling 10.5Hz signal
was used along with the new higher pulse signals. I've talked to
people who claim they still hear something, however, they say the
pulse rate(pr) changes which is not a feature of the new system.
When the new system seemed to get going it transmitted with the
new (pr) all the time. They probably heard the american conus
b system or something. Earlier in 1991 the new system would
transmit at a specific part of the band and stay there for hours.
Periodically the operators would reduce the (pr) rate to
the old rate but only for a very short time. I suspect that when
they did this they were simply experimenting with the new system.
When it was being worked properly, it maintained its new (pr) rate
and periodically changed frequency just like the old system.
I suspect that this new system has been mothballed. It is
possible that they may use it periodically as a backup for
their early warning satelite network, but I kind of doubt it. If
that were so I think we would still hear the 10.5Hz traveling
signal. Has anyne heard such a signal recently? Does anyone
know what has happened to the east coast signal, has it gone too?

Did it go at the same time as the west coast one. For information, there used to be two woodpecker radar systems for the US; one for the east coast and one for the west. Although it would seem that the absence of the woodpecker signal would be the result of the ending of cold war tensions I don't think that is the case! As I've mentioned the signal was abscent for almost the whole of 1991 and things were still not completely "cold" then (remember the attempted coup etc. at that time). If it was of any use, they would have still needed it in 1991, unless the one monitoring the eastern US took over for a while. It is possible that the system is simply out of date and the upgrade was an attempt to better it but was not successful! Whatever that case, I would like to hear from someone who did hear the signal at this time too! It couldn't be missed in 1991. It was very loud and caused even worse interference than the old system. I actually named it the "buzzpecker". If anyone has some information drop me a message!

In a previous article, mmjjmm@post.its.mcw.edu (Michael Malloy) says:

>Impressions wanted of the Kenwood TH-22AT. I am thinking about getting
>one for a second HT.
>--

If you are using it as an HT, it is great. If you want to use it as a mobile rig and are in an intermod area, it suffers from the same problems as most modern HTs (it sucks). It puts out 3w out on the regular battery. I have used it mobile on the rubber duck with reasonable success. Through a quarter wave mag mount driving to Beautiful Downtown Cleveland, it was much worse than my old Kenwood TR-2600A. (There has to be a filter that will solve this problem.

Bottom line: For a small (shirt pocket) 3w HT, it is great. For mobile use, I will stick with my Yeasu FT-2400H.

207. ARRL Wrong Proposals

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-05 22:56:56 UTC
From: sv1cec@sv1cec.ampr.ORG
Message-ID: <176@sv1cec.ampr.org>
Source record: 268924

To : All Radio Amateurs
The DXCC commitee
The DXAC commitee

Gentlemen,

A recent "Proposed Vote for Schedule" has been announced by the DXAC Chairman, which includes the topics of Mount Athos Deletion and acceptance of the pseudo-state of the occupied part of Cyprus, in the DXCC list.

It is quite clear to us and probably to every greek radio amateur, that the above proposal, sounds like a blackmail effort or a threat. It can easily be translated to "make SV/A active again, or we delete it, and add the pseudo-state instead", or even to "behave or you will be punished".

We would like to remind to Mr. Chairman, as well as any one else behind these proposals, the followings :

- The pseudo-state that you propose to accept as a DXCC country has resulted from the unprovoked invasion of the Turks military forces in Cyprus, in 1974. It is therefore a result of a violent act, from one country against another. Are you gentlemen of the DXAC commitee going to appraise and encourage such acts, by proposals like the one mentioned above?

- Are you aware gentlemen, that the northern part of Cyprus is still - since 1974- under armed occupation, by the Turkish Armed Forces and that there are still homeless people, forced to abandon their properties and home land? We very well remember that some years ago, when Iraq invaded Kuwait, an international force was assembled to liberate the occupied country. Of course, such a force was never assembled for Cyprus, but then again, Cyprus is not producing any oil. This however does not give you, or anybody else, the right to create a status quo, with stupid proposals, like yours.

- The pseudo-state gentlemen, has not been recognized by any international organization (like UN or EC) or by any other country, except of course Turkey. Are you gentlement going to replace these international organizations in their role, or your real intentions are to exercize pressure to these organizations to recognize countries according to your (hidden, possibly financial) wishes (or interests)? Also, are you aware that there have been several appeals to the UN against Turkey, and that Turkey has been condemned by the UN for its acts? Are you encouraging Turkey's acts by your proposals?

- The DXAC, the DXCC and all other radio amateur organizations, as well as radio amateurs themselves, have to stick to the rules of amateur radio, as they are defined after years of ham activity. One of the most

basic rules of our hobby is that amateur radio stays clear of politics or personal financial interests. How can it be then, that you are currently taking part in a very old debate between Cyprus and Turkey? Is it possible that financial reasons are behind your proposals?

- The Mount Athos gentlemen is not just a banch of "mounts". It is a holy area of the Romanian, Yugoslavian, Russian, Bulgarian and Greek churches, or even better put, of the whole Christian Orthodox world. Mount Athos is entirely populated by monks, and Apollo is the only monk in the whole world who is an active radio amateur (at least from what we are aware of). When Apollo stopped its DX activities, a lot of hams around the world complained and urge him to repeate them. Now gentlemen, you are proposing the deletion of SV/A from the DXCC list. Of course, this is not the first time that you are making such proposals, maybe because you consider yourselves authorised to decide on subjects affecting everybody in our hobby, without asking anybody's opinion.

As far as we are concerned, dear fellow hams, we promise you that if these proposals are ever voted, we will stop all DX activities, and will encourage other Greek hams to do the same, so that the SV prefix becomes as rare as the SV/A is today. Then again, the DXCC commitee might very well delete SV from their list, but we certainly do not care to be part of a list created by ignorant, politically influenced mappets.

The following radio amateurs are signing this message :

208. ARRL Strange Proposals

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-05 22:58:20 UTC
From: sv1cec@sv1cec.ampr.ORG
Message-ID: <178@sv1cec.ampr.org>
Source record: 268925

TO : The DXCC Commitee
The DXAC Commitee
The ARRL
All Hams

Gentlemen,

Following our previous message, we cannot avoid writing this second one, for the very simple reason, that yesterday one of us received the January issue of the QST magazine.

In this issue, we noticed an article about the Peter I Island.

Gentlemen of the ARRL, DXCC and DXAC commitees, you must have a very strange way of deciding which countries you are going to put in your DXCC list. From what we read in that article (and if our English are not that poor), it is obvious that you went too far, to include the Peter I island in your list, before even someone had requested it.

Now the Peter I Island is a deserted part of land, with no permanent population with only birds, fog and ice being its permanent residents. YOU GENTLEMEN included this God-forgotten place in your DXCC list.

On the other hand, someone from your organization, is proposing to you to delete Mt. Athos. A populated area, with at least one licensed radio amateur, living permanently in the area.

We must say gentlemen, we admire your sense of humour. Because if this proposal wasn't made, just because its originator had a lot of humour, then one must wonder what his real intentions were. We all wish we knew the name(s) of that person in order to be able to contact him and find out what are his real reasons for proposing the deletion of Mt Athos. They most surely had nothing to do with the well-being of our hobby.

We will have to admit gentlemen, that it is either you that forgot the basic principles of our hobby, or that all your advises printed in the books you publish, are nothing but hot air (sorry, a four-letter word would be more appropriate but our good manners forbid its usage).

We urge you to think again, before accepting such a proposal, which will make you openly involved in politics.

LET'S KEEP AMATEUR RADIO AWAY FROM POLITICS

Derek Wills (oo7@astro.as.utexas.edu) wrote:
: gdavis@griffin.emba.uvm.edu (Gary Davis) says:

: >>Subject: Hams should learn English

: Well, let's see what we have here:

: >>The word doesn't dosen't exit, " He don't need a new michrophone"
: ^^^^^^^ ^^^^ ^^^^^^^^^^^

: Hmm, 3 spelling errors in one line is not encouraging.

: >>I'm still wondering how such poor English can be acquired
: >>when almost all broadcasting and newpapers does not indulge in such
: >>flights of misuse.

: "indulge in flights of misuse" is a pretty convoluted
: expression, pardner. First time I ever heard it.

: Further, "newspapers" is plural, and should be followed
: by "do not", rather than "does not".
:

: >>I've heard some
: >>JAs and many Eurpeans do better with English as a second and third
: >>language as 60% of American hams can do with it as their first.
: ^^
:
: This is a terrible sentence, although it helps it you replace
: "as" with "than".

: Judge not, lest ye be judged, eh?

: I think we both agree that the standard of spelling and grammar is
: not very high in the everyday world, although if you are going to
: complain about it you should take a little more care with your postings.

: I don't think the problem is one found only among hams, though. In
: the days when I read rec.radio.amateur.policy, it was remarkable that
: nearly all the postings complaining about the Morse code requirement were
: written by people who apparently dropped out of kindergarten, judging
: by their spelling and command of language. That doesn't mean that
: knowing the code improves your spelling, but it must mean something.

: Checks spelling, exits left -

I would scour your posting for English misuses, but at a glance, I didn't
seen any, and it's the idea that counts anyway, right? But original poster

wasn't as bad as the people (person) he (she) quoted. Misspelling something is onething, mis-saying it is something altogether different. Oh and his grammar problems as mentioned above are about as common as somebody using "who" instead of "whom" or "that" vs. "which". This isn't alt.grammar.sucks, and before you comment that *he* started it, remember that _saying_ something wrong is a lot harder than _writing_ something wrong. Because I'm typing, I don't always type confluent sentences, either. . .

:: SWEDEN CALLING DXERS ::
:: from Radio Sweden ::
:: Number 2197--April 5, 1993 ::
::::::::::::::::::::::::::::::::::
```

Satellite, shortwave and other electronic media news from Radio Sweden.

This week's bulletin was written by George Wood.

Packet Radio BID SCDX2197

All times UTC unless otherwise noted.

NORDIC MEDIA NEWS

TV 5--On March 22nd France's TV Cinq Europe, and Sweden's TV Fem Nordic settled out of court their dispute over the use of the number 5. The French retain the rights to the letters TV, followed by a 5, and TV 5 Nordic is now called Femman, which literally means "The Five" in Swedish, and is in fact a friendly and familiar expression. (TT)

TV 6--Meanwhile, yesterday evening Sweden got its own TV 6, a so-far cable only channel owned by the Kinnevik media empire, which also owns the TV3 channels in Sweden, Norway, and Denmark, the pay film channels TV1000 and FilmMax, part of Sweden's private terrestrial channel TV4, several magazines, and cable-only music video and home shopping channels.

The new TV 6 is supposed to be a channel for women. Kinnevik promises no sports, and no violence. Ironically, the first promo the station showed started with a close-up on a gun. The initial promos were followed by no less than 5 separate commercials in a row for the same washing detergent. Programming consists of a film a night, as well as old American and Australian series, and programs about health and exercise. TV 6 has been criticised here for failing to produce its own material on problems discussed by Swedish women, like abortion and abuse. The station is offering one daily talk show, but that comes from the United States, the Ricki Lake Show.

We've tried for several weeks to get in touch with TV 6 for an interview, but they've been unavailable. Initially the station is only accessible in Sweden's largest cities over the cable networks operated by Swedish Telecom.

CABLE RADIO--The advent of new commercial radio stations here has led Swedish Telecom to upgrade the radio channels on its cable networks. Until now, only

Swedish Radio's national channels as well as one or two community radio stations have been carried on cable radio. All of these signals have been on other frequencies than the terrestrial channels, and despite 24 available frequencies, the only other channels have been stereo sound from Swedish Television's two outlets, and BBC World Service has been available in inner Stockholm. Even Radio Sweden's Stockholm International FM transmitter was excluded.

Now all that is changing. Swedish Telecom's cable is switching to a system of relaying everything that's on the air, on the original frequencies. (Svenska Kabel-TV)

LOCAL RADIO--There are problems, however, with some of Stockholm's new local radio stations. Radio City, which transmits on 105.9 MHz here in Stockholm, has complained to the Minister of Culture that it is being interfered with in parts of the city by Bandit Radio on 105.5. (TT)
Swedish Radio is in the part of the city where the alleged interference is taking place, and both stations come in well here, without mutual interference. Either the problem has been solved, or has been exaggerated.

However, a number of the new stations do seem to be interfering with each other, at least when you wander in the city with a portable radio, and we've heard that some have been over-modulating, making life difficult for their neighbors on the band.

SOEDERTAELJE--A delayed auction for local radio frequencies was held on March 21st, for two channels in Soedertaelje, southwest of Stockholm. One frequency was won by Claes Nydahl, who for years illegally ran commercials on the community station Radio Nova. (By the time he was finally convicted, the then-new Conservative government was preparing to legalize commercial radio, and the authorities let the case die.) He offered a USD 275,000 annual concession fee for the licence. According to reports, the station will most likely relay Stocholm's Radio Megapol, which operates on 104.3 MHz. By carrying the same programming, the two stations avoid a possible problem of mutual interference.

The other allocation was won by a group represented by Jan Friedman, who was among those behind the starts of Kinnevik's TV 3 and the private radio network Radio Rix. He offered just under USD 100,000 for his licence. (TT)

TELE-X--On March 16th, Sweden's Tele-X satellite went out of control for an hour, spinning the wrong way. This affected viewers of NRK, TV 4, and TV 5 Nordic as well as Radio Sweden listeners. TV 4 and Radio Sweden were actually available on the Sirius satellite at the same position. Space dust or mini-meteors are being blamed for the fault. (Bertil Sundberg in "Paa TV")

SIRIUS--Negotiations on which programmers will appear on Sirius are continuing, and ought to be finalized during the next few months. Transmissions are expected to begin during the Spring. Some are expected to be transmitted uncoded. ("T-time")

DAB--Swedish Teracom, the section of Swedish Telecom responsible for broadcast transmitters, says the first regular broadcasts of Digital Audio

Broadcasting here are now scheduled to begin in early 1996. Previously 1995 had been given as the date for DAB's debut. The third generation of DAB tests here, using the final DAB standard, have begun, using three transmitters carrying five programs streams on a single frequency in the Uppsala-Enkoepiung area north and west of Stockholm. ("T-time")

DIGITAL TV--Swedish Teracom says decoders to view digital television broadcasts on analog sets are under development. Test transmissions of digital TV are to begin in 1996, and decoders appearing on the market in 1997. ("T-time")

BERLUSCONI AND PUBLIC SERVICE BROADCASTING--the new chairman of the Swedish Television board, Anna-Greta Leijon, has expressed concern about the new political career of Italian media magnate Silvio Berlusconi. He used his three private television networks to promote a new political party that came out of nowhere to make Berlusconi most likely Italy's next prime minister. Berlusconi has offered to sell one of his three networks, if that would ease opposition to his forming a new government.

Anna-Greta Leijon, Minister of Justice in a former Social Democrat government, says the debate here about the role of public service broadcasting must take into account the risks of Swedish media concentrations, such as the Jan Stenbeck's Kinnevik holdings, and the Bonniers publishing empire. ("Dagens Nyheter")

NORWEGIAN TV2--Norwegian TV2 is moving to 1 degree West (presumeably to the new Intelsat 702 if and when it is successfully launched) this Summer. (Jan Johansson)

EUROPEAN MEDIA NEWS:

VOX--Germany's Vox channel on the Astra satellite is in danger. According to news agency reports, the owners have been unable to attrack new stockholders, and the channel is now starting to wind-down, although talks continue with the Walt Disney Company, among others. If Vox doesn't turn into a European version of the Disney Channel, it may go off the air, according to one report on April 30th. (ADN news agency via BBC Monitoring and James Robinson) Which means NBC's Super Channel could make the move to Astra from Eutelsat II-F1.

BBC--We've reported before that BBC World Service Television, which is an entertainment channel in Europe, will be bringing Europeans the 24 hours news channel carried to the rest of the world. Now there's a report the new channel will be on Eutelsat II-F1, on 11.617 GHz. But so far no indication when it may begin. (James Robinson)

Right on schedule at midnight local time on March 27th, Britain's Radio Five pulled the plug, to be succeeded by the news and sports channel Radio Five Live, relayed to Europe on Astra transponder 23.

MICROSOFT--Last week Astra transponder 47 (which British Sky Broadcasting has leased, apparently in preparation for Sky Sports 2), was used by the American software giant Microsoft for a "Devcast", a day of special programming to European software developers. Like a similar broadcast last Fall, Intelsat-K

was used to relay the program across the Atlantic.

CHINESE CHANNEL--The China Channel is to broadcast on UK Living's Astra transponder 34 between 23:55 and 03:00 hrs, starting within the next two months. (James Robinson)

WORLD TAMIL TV--World Tamil Television is apparently a new station on Eutelsat II-F3, sharing the 11.575 GHz transponder with Telepace, Muslim TV, and Albanian TV. When they aren't on, the channel shows a lovely test pattern with a rotating globe and the ID "World Tamil Television". (James Robinson)

EUTELSAT--Things are happening at 25.5 degrees East, where two of Europe's oldest satellites, Eutelsat I-F1 and I-F4, are co-habitating. With failed launch of Turksat-I, CNN is using that position to reach Eastern Europe, using 11.093 GHz.

Britain's Independent Television News is also using several transponders at that position for newsfeeds. ITN has signed a dedicated 24-hour pan-European satellite transponder lease with BT to provide it with satellite capacity for its News at Ten, Channel Four News programs and other network requirements.

A Eutelsat I-F4 satellite transponder is being used to host the newsgathering network. ITN is expected to sub-lease unused portions of its 'network' to companies on an ad-hoc basis as required. Priority will be given to ITV network companies needing OB services. Spare capacity on the transponder is available to other broadcasters through ITN's news services desk.

Until now ITN booked the use of a transponder by the minute at set times of the day to coincide with its scheduled programmes. The new 24-hour transponder offers complete freedom to take in feeds at any time, with the added benefit of live reports during extended programming or news flashes. ("Satnews")

This satellite is in inclined orbit, so in the mornings nothing can be seen at all, while as the day progresses, reception of CNN in Stockholm is much better than the CNN signal on Astra. ("Satnews" and James Robinson)

EUROPROGRAMMING--According to a European Commission report most television channels inthe Europe devote most of their programming schedules to European-sourced programming, although some channels need to improve their performance.

In total 105 channels were surveyed, with 67 percent of channels managing to reach the EC-set standard. Over half of the UK-based channels failed to air enough European programming, although the EC noted that the offending channels were all non-national services, such as Japan Satellite TV. Interestingly enough, the UK government has written to the Japanese channel, reminding them to show more European sourced programming.

Full marks were awarded to all stations in Portugal, Ireland, the Netherlands and Denmark. ("Satnews")

The European Union has announced it will take Britain to court for not fully applying the 1989 "Television Without Frontiers" directive, which contrary to its name, seeks to establish quotas for non-European television programming. The EU, egged on by France and Belgium, object to the Cartoon Network/TNT channel, which broadcasts 100 percent American programming, and the 24 hour QVC shopping channel. Both channels are uplinked from London.

The directive says that European satellite broadcasters should carry a majority of European programming, "where practicable", and allows only for one hour of home shopping on a channel per day. (AP, Reuters)

The "where practicable" clause has been widely interpreted as a loophole, turning the directive into a recommendation only. (Such was the general understanding when the original Council of Europe directive, which the EU directive follows, was drafted here in Stockholm.)

Ironically, France, the main mover for "European" (i.e. French as opposed to English-language) programming, not long ago praised MTV, which is about as American-dominated as you can get. The directive seems to be leaking in other directions. "Satnews" reports Quantum International has signed an agreement with RTL5, the Dutch general entertainment satellite channel on Astra, to relay 36 hours of infomercial shopping programs each month, an apparent violation of the hour per day rule.

RTL's Astra 1C satellite transponder will be used to host a second infomercial service. Quantum International's "What's In Store" home shopping series will be a regular early morning and daytime feature. The RTL service will be aimed primarily at Dutch and mainland Europe customers with telemarketing and fulfilment handled by Quantum's Dutch associates. ("Satnews")

One bizarre repercussion of the directive is that it would ban TV Asia and Japan Satellite Television, both of which carry programming serving Asian minority communities in Europe. To force such stations to carry European programming negates their entire purpose, and rejects one of the best uses of satellite broadcasting. One must also wonder how France can justify broadcasting its TV5, Radio France International, and Canal Afrique programs to Africa, Asia and the Americas, or whether Deutsche Welle or the BBC World Service should be required to close their activities in other continents for not carrying enough American or Asian programming?

HUNGARY--Circumventing a state monopoly on radio and television, a local entrepreneur began broadcasting Hungarian programming from the Netherlands on April 2. Called BP-1, programs are broadcast between 04:00 and 13:00 hrs UTC on Eutelsat II-F3, 11.638 GHz. Programs include movies, soap operas, documentaries, cartoons, sports, and music. There are five daily 30 minute newscasts, and material orginally in English is also available with original sound. Subtitles are to be made available in teletext in German, Slovak, Serb, Croat, and Romanian. (AP and James Robinson)

EURONEWS--Euronews France is to begin broaadcasts on Telecom 2B from June 1. (James Robinson)

CINEVISION--An uncoded multi-lingual film channel called Cinevision is scheduled to begin on Eutelsat II-F1. (James Robinson) This sounds too good to be true, more like an April Fools joke. But James assures us it's real, and the plans are to turn it into a coded videocrypt pay service later this year.

TELE UNO--Tele Uno is a new channel testing on Canal Hollywood's transponder on 12.640 GHz on Intelsat-K. American series like "Dallas", "The Love Boat", and "The Fugative" are being carried. It's not clear if this is to be part of Canal Hollywood's upcoming pay-per-view service. (Bertil Sundberg in "Paa TV") How come none of this is ever in evidence when I check out 12 GHz on Intelsat-K?

GALS--Russia's new GALS satellite at 44 degrees East began tests on March 19th. Transmissions have been spotted in the Ku-band on 12.170 GHz. (Bertil Sundberg in "Paa TV")

DELAYS--The launches of VH-1 and Nick at Nite (on Astra), and the Sci-Fi Channel (on Eutelsat II-F1) have all been delayed until September. (James Robinson)

NORTH AMERICAN MEDIA NEWS:

TV ASIA--Hughes has signed a program distribution agreement with TV Asia to provide the first North American daily pay-television Asian network. The channel will be carried on the second DirecTV satellite, slated for launch in July aboard a General Dynamics Atlas rocket. The first direct broadcast satellite was successfully launched on 17 December 1993. ("Satnews")

PERSONAL COMPUTER CHANNEL--Tele-Communications Inc. and Microsoft Corp. are preparing to create a new cable television channel that will concentrate on personal computers. Under the joint agreement, Microsoft will provide much of the computing technical expertise and support while TCI will utilise its cable muscle. Microsoft is already active designing Windows-based cable-TV set top boxes with a number of other strategic partners, including TCI.

The new niche channel will use digital compression technology, set to allow 500-plus cable television channels to be fed to the home. Microsoft and TCI are also working on interactive cable modem services that allow PC users to access on-line information through the cable network. It is understood that Microsoft is separately setting up its own on-line information service with a number of partners, and access may be given to this.

No service launch date or expected cost has been released.

Recently the companies said that they would be developing interactive video services in Seattle and Denver. In the "Financial Times" newspaper Bill Gates was quoted as saying that the current rush of interest in multimedia was a form of collective mania. Gates also questioned the value of most of the trials of multimedia, where computer, telecommunications and television converge, in the US and Europe. Many companies wrongly focus on one technology, such as video-on-demand, rather than on all services. ("Satnews")

INTERACTIVE-TV--The debate over the potential consumer demand for interactive television is likely to continue no matter what happens in Time Warner's interactive-TV trial in Orlando, Florida. Time Warner hopes its Full Service Network, which will be available in 4,000 households in Orlando late this year, will reveal much about what cable-TV subscribers want from interactive TV and how much they're willing to pay for it.

The Orlando trial isn't the only test of interactive TV this year. Viacom, another cable industry giant, is conducting a similar test with AT&T in Castro Valley, Calif., and other telephone companies are planning tests. Despite the bustle of action in interactive TV this year, Carl Ledbetter, president of AT&T consumer products, said the day when 90% of U.S. households will have fully interactive TV is still five to 10 years away. "The very difficult thing in the next year will be trying to get an understanding of what customers want," he said. ("Minneapolis Star-Tribune" from rayo@mtunp.att.com)

ASIAN MEDIA NEWS:

DISH BANS--Prices of satellite dishes have more than doubled in Saudi Arabia since the government banned them last month. Shopkeepers are charing more than USD 1800 for a secret installation, compared to a pre-ban cost of USD 800 for a simple dish. The price of receivers has also skyrocketed from USD 2267 to USD 400. The March 10 ban threatened violaters with fines of up to USD 133,000, and confiscation of their equipment, but did not say whether the measure is retroactive. (AP)

Iran has banned satellite dishes, Interior Minister Ali Mohammed Besharati was quoted as saying today, April 5. The cabinet has instructed the Interior Ministry to implement the ban within two months, the daily "Salam" quoted Besharati as telling reporters in Tehran Monday.

"Salam" reported last month that 400 dishes were being installed daily in Tehran, despite warnings by authorities that foreign television programs were part of a Western "cultural offensive" to corrupt Moslem Iranians. The newspaper criticised the cabinet decision, comparing it to a 15 year ban on videos that was lisfted in February. (Reuters)

Tuesday is the deadline for Chinese citizens to obtain official permission for their satellite dishes, but in another example of the government's loss of control, few people seem concerned that they didn't have approval. No one has been seen dismantling dishes in Beijing, ven though regulations banning private dish ownership stipulated that equipment already installed had to be specially approved by the government by Tuesday or taken down. (AP)

Meanwhile, in Tibet, the Chinese occupation authorities have banned foreign television channels. Occupation government organisations are set to examine cable television andsatellite television equipped properties to ensure that unauthorised channels or services are not being received.

Individuals and companies wishing to receive foreign broadcasts have to appeal and go through a rigorous classification programme to ensure that they comply with the government's directives in full. The decree hinted that breaching its rules would be classed as a criminal offence, subjected to

stiff punishment. ("Satnews")

An Information Ministry official says that Malaysia's govenrment may review its ban on the reception of satellite television broadcasts in the future. Malaysians now need a government licence to own the dish antennas needed to receive satellite broadcasts. The government feels that foreign television progams have too much sex and violence, and are a threat to Malaysians' morals. The officia, Fauzi Abdul Rahman, says the government has to be satisfied that satellite broadcasts will not position the minds of the people of threaten national security. He also predicted that eventually the broadcasts' technology would become too sophisticated for them to be stopped. (AP)

INDIA--All India Radio is developing a 20 channel satellite radio system, including AIR's present 5 channels. ("The Indian Express" and All India Radio via BBC Monitoring)

BBC AND STAR--Rupert Murdoch's Star-TV is dropping BBC World Service Television from Asiasat's northern beam, which covers much of China and Taiwan, as of April 17th. "Commercial reasons" are cited, and Murdoch is not replacing the BBC with his Sky News channel from Europe. Instead, Star will launch a Chinese movie pay television channel. "Star Movies" will launch on April 20. From May 1 the channel will be encoded and offered only through cable TV networks. (This parallels Murdoch's pattern in Europe where initially uncoded satellite channels have been replaced with pay channels. Some observers say such a system would never work in South Asia, where Murdoch would have to negotiate with tens of thousands of small cable operators.)

Star has denied dropping the BBC because of complaints from the Chinese government over BBC reportage of Chinese human rights abuses.

The BBC hopes to resume broadcasts to northern Asia, but in a New Delhi press conference BBC WSTV chief executive Christopher Irwin declined to name an alternative satellite.

The BBC will continue to broadcast to South Asia on Asiasat's southern beam. Irwin says South Asia is now BBC WSTV's main priority. (Reuters and AP)

BBC AND SOUTH ASIA--At the New Delhi press conference, BBC World Service Television head Christopher Irwin announced a strategic newsgathering alliance in India, and plans to launch a family of channels in the region, including a new weekly program about India. The former BBC correspondent in India, Mark Tully, would present the program, which is likely to start in the middle of this year.

The program would be produced in New Delhi in co-operation with BBC WSTV's partner in India, Asian News International. It will cover stories from across South Asia. A week of special programs about contemporay Indian culture and identity will feature on BBC WSTV in April. Apart from audiences in India, the programs will be available in Asia on the BBC channel on Star-TV and to viewers of "The Late Show" on BBC domestic television in Britain. (PTI via BBC Monitoring)

BBC AND THE MIDDLE EAST--BBC WSTV says it has signed a 10 year contract that would allow it to launch an Arabic-language news service to the Middle East and North Africa later this year. The contract is with Orbit, a private company owned by a consortium of Middle Eastern and other international businesses. BBC WSTV in Arabic will be part of a pay-TV multi-channel package using one of the Arabsat 1 satellites. The proposed Arabic service caused a conflict with Star-TV, which feared the Arabic channel would overlap with its own Asiasat coverage area. (Reuters)

TURNER BROADCASTING--Speaking in Hong Kong recently on an Asian trip, Turner Broadcasting founder Ted Turner said the satellite television industry faces overcrowding and many networks could go broke. Turner Broadcasting will be launching its Cartoon Network and TNT channels to Asia later this year.

Commenting on rival Rupert Murdoch, Turner said he's caused trouble in China, and paid too much for Star-TV, but it's hard not to like him. Turner said Murdoch's take-over of Star-TV was responsible for scaring China into tightening controls on satellite dishes recently.

Because of illness, Turner was unable to make a planned stop in India. However, company officials announced Turner Broadcasting is seeking a deal with Indian state television to broadcast programs, leasing a transponder on India's Insat 2-B satellite to provide "India-specific" programming. TBS currently broadcasts to India from Indonesia's Palapa satellite, which provides a far weaker signal in the subcontinent than does Asiasat. TBS has signed a contract to broadcast on Apstar-2, due to go into operation in March, 1995, which should provide India with far stronger reception. (Reuters)

HONG KONG--Hong Kong governor Chris Patten has made a thinly-veiled attack on media barons Rupert Murdoch and Ted Turner, saying freedom of speech cannot be curtailed for short-term commercial expediency. While not mentioning any broadcasters by name, the remarkes were clearly aimed at both tycoons who have been accused recently of kowtowing to Beijing in a bid to tap the lucrative Chinese market. (Reuters)

SHORTWAVE:

RADIO MIAMI INTERNATIONAL--Due to standard frequency and time changes taking place on March 27 and April 3, there will be several changes to RMI's schedule. The following is our new schedule, effective April 3, 1994:

TRANSMISSIONS OF RADIO MIAMI INTERNATIONAL VIA KWHR, WHRI AND WRNO:
UTC TIME UTC DAYS LANGUAGE STN FREQUENCY
0000-0500 Tues-Sun Spanish WHRI 9495 kHz
0000-0030 Monday Spanish WRNO 7355
0800-0900 Mon-Fri Spanish WHRI 7355
1000-1300 Mon-Sat Spanish WHRI 9850
1400-1430 Mon-Sun Vietnamese KWHR 9930
2100-2200 Mon-Fri Creole WHRI 9485
2200-2300 Mon-Fri Creole WRNO 15420
2300-0000 Mon-Fri Spanish WHRI 9495

SCHEDULE FOR HRJA - RADIO COPAN INTERNATIONAL (Radio Miami's sister station in Tegucigalpa, Honduras). Radio Copan broadcasts with 1000 watts of power to the Northern Caribbean and Eastern North America:
UTC TIME UTC DAYS LANGUAGES STN FREQUENCY
1400-1500 Mon-Sat Spanish/English HRJA 15675 kHz
1800-0000 Sunday Spanish/English HRJA 15675
1900-2300 Tues, Fri Spanish/English HRJA 15675
2000-2300 Mon, Wed, Thurs Spanish/English HRJA 15675
2000-2200 Saturday Spanish/English HRJA 15675

Radio Copan's standard program format is a mixture of Latin American music and short features in Spanish and English about Honduras, Latin America, and Mayan culture. In addition, there are several regularly-scheduled longer programs in both Spanish and English, including:

UTC DAYS UTC TIME PROGRAM
Mon-Fri 2200-2215 Truth For Living - religious program (English)
Mon-Fri 2230-2245 Radio Copan Mailbag - with Jeff White (English)
Mon-Wed 2330-0000 La Voz de la Junta Patriotica Cubana (Spanish)
Fri-Sat 2330-0000 La Voz de la Junta Patriotica Cubana (Spanish)
Tues, Fri 1900-2000 La Voz de los Educadores Cubanos (Spanish)
Saturday 2100-2130 Radio Roquero - con Victor Garcia Rivera (Spanish)
Sunday 1800-1900 Crenshaw & Company - talk show (English)
Sunday 2000-2100 La Voz del Veterano - (Spanish)
Sunday 2200-2230 These Last Days - religious program (English)
Sunday 2230-2300 The Final Crisis - hosted by Orlando Stuart (Eng)

SCHEDULE FOR WRMI - MIAMI, FLORIDA, USA: As of late March, WRMI was conducting test broadcasts irregularly on 9955 kHz with 500 watts of power. As of early April, WRMI is expected to be on with full power (50,000 watts) on 9955 kHz with test transmissions. Regular transmissions should begin later during April. The exact schedule has not been determined yet, but we expect it to be approximately 2100-0500 UTC and 0900-1300 UTC daily. The primary target area is Latin America.

Programming will be in English, Spanish and other languages. (Jeff White, General Manager, Radio Miami International)

PUBLICATIONS:

Once again a reminder: The new edition 5.5 of Radio Sweden's booklet "Communications in Space: The (Last) DXers Guide to the Galaxy" is now available free of charge. Just write to Radio Sweden, S-105 10 Stockholm, Sweden. You can also order by fax to: +468-667-6283. And the electronic edition will (finally) be uploaded along with this file.

Sweden Calling DXers is the world's oldest radio program about international broadcasting. Radio Sweden has presented this round-up of radio news, features, and interviews on Tuesdays since 1948. It's currently broadcast on the first and third Tuesdays of the month.

Radio Sweden broadcasts in English:

Europe and Africa:

16:15 hrs on 1179 and 6065 kHz
17:30 hrs on 1179, 6065, 9655, and 15390 kHz
20:30 hrs on 1179, 6065 and 9655 kHz
21:30 hrs on 1179 and 6065 kHz, and
22:30 hrs on 1179 and 6065 kHz

Middle East and Africa:

17:30 hrs on 6065, 9655, and 15390 kHz
20:30 hrs on 6065 and 9655 kHz

Asia and the Pacific:

11:30 hrs on 13775, 15120, and 15240 kHz
23:30 hrs on 11910 kHz and
01:30 hrs on 9695 and 11695 kHz

North America:

12:30 and 13:30 hrs on 15240 and 17870 kHz
02:30 and 03:30 hrs on 6040 and 9850 kHz

South America:

00:30 hrs on 6065 and 9850 kHz

The broadcasts at 16:15, 17:30, 21:30, and 22:30 hrs (and weekends at 20:30) are also relayed to Europe by satellite:

Astra 1B (19.2 degrees East) transponder 26 (Sky Movies Gold/TV Asia/Adult Channel) at 11.597 GHz, audio subcarrier at 7.74 MHz,

Tele-X (5 degrees East) (TV4 transponder) at 12.207 GHz, audio subcarrier 7.38 MHz.

Radio Sweden is also relayed to Europe via the World Radio Network on MTV's transponder 22 on Astra, audio 7.38 MHz, daily at 20:00 hrs UTC.

Radio Sweden can also be heard on WRN's North American service on ASC-1, on SCOLA's transponder 23, audio 6.20 MHz, daily at 00:00 and 20:00 hrs.

Contributions can be sent to DX Editor George Wood by fax to +468-667-6283, from MCI Mail or CompuServe to the CompuServe mailbox 70247,3516, from Internet to 70247.3516@compuserve.com, or to SM0IIN at the packet radio BBS SM0ETV.

Reports can also be sent to:

Radio Sweden
S-105 10 Stockholm
Sweden

Contributions should be NEWS about electronic media--from shortwave to satellites--and not loggings of information already available from sources such as the "World Radio TV Handbook". Clubs and DX publications may reprint

material as long as MediaScan/Sweden Calling DXers and the original contributor are acknowledged, with the exception of items from BBC Monitoring, which are copyright.

We welcome comments and suggestions about the electronic edition, Sweden Calling DXers, and our programs in general.

Thanks to this week's contributors Good Listening!

212. IPS Daily Report - 05 April 94

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-05 23:19:14 UTC
From: rwc@flare.syd.ips.oz.au
Message-ID: <1994Apr5.231914.8261@ips.oz.au>
Source record: 268779

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 5/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 5 APRIL AND FORECAST UP TO 8 APRIL

IPS Warning 10 was issued on 31 March and is current
for interval April 3 - April 14 (coronal hole).

1A. SOLAR SUMMARY
Activity: Very Low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 077/16

1B. SOLAR FORECAST
06 April 07 April 08 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/13

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: one major storm period, unsettled to
active at other times.

Estimated Indices : A K Observed A Index 4 April
Learmonth 27 3344 6433
Fredericksburg 25 39
Planetary 35 50

Observed Kp for 4 April: 6675 4434

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
06 Apr 35 Active to minor storm.
07 Apr 35 Active to minor storm.
08 Apr 35 Active to minor storm.

2C. MAGNETIC COMMENT
Coronal hole induced activity currently in progress.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
05 Apr normal fair fair-poor
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 Apr normal-fair fair poor
07 Apr normal-fair fair poor
08 Apr normal-fair fair poor
3C. GLOBAL HF PROPAGATION COMMENT
Fair-Poor HF comms quality expected at times over next three days.
Conditions at high lats are expected to remain degraded
until April 14.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were about 15% above predicted monthly values

Observed T index for 05 April: 64

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
06 Apr 40 Near predicted monthly values.
07 Apr 40 Near predicted monthly values.
08 Apr 40 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Fair-Poor HF comms conditions expected until April 13, especially
during local night.

>a pure waste of bandwidth.

Actually, a properly cross-posted article does not use any more bandwidth
than an article posted to only one newsgroup. That is why crossposting
is different from posting many times.

The exception is when someone has a feed that gets one of the groups and
not the other. Then I agree, he might have a valid point if he says
that it is a waste of bandwidth _on that link_.

Should the list go into r.r.i only? I don't really care. I would like
to see it still posted, but it doesn't matter to me where.

I just got some news that a club member just got his ticket
in 8 wks, 1 day. Concord session of Feb. 6 which he says
went to the Sunnyvale VEC. I wonder if the ARRL is incubating
their applications a bit more than 97.519(b) specifies.....

I am waiting for my upgrade, and it's been 11+ weeks now. Another
checkpoint is in the system... silicon valley VEC -- we'll see
how fast that turns around....

Ken

216. chirp

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-06 00:41:44 UTC
From: gardner@physics.ubc.ca
Message-ID: <2nt0g8$29@nntp.ucs.ubc.ca>
Source record: 268783

Might as well get another question in. Does anyone know
what that chirp like signal is? We all hear it from time to
time. You can hear it (depending on the conditions) when
the radio is tuned to a station or when it is set to ssb(upper
or lower). I've studied it and found that under very good
conditions it occurs every five minutes. Under normal
conditions it may be heard every five, ten or fifteen
minutes. It appears to be a transmission that quickly
moves from lower to higher frequencies at a rate of
100KHz a second. Is it some kind of isonospheric sounding
device to study the profile and MUF of the ionosphere?
If your not sure what I mean then tune to a moderately
strong station or set your radio to ssb and wait. You will
probably hear it in the form of a single chirp. I'm aware that
such an effect can be produced my an ordinary amateur
radio if its frequency is changed while it is still transmitting
and you happen to be tuned to a station frequency that
is swept by the transmitter. What I'm hearing is not this! It
definitely occurs at regular intervals and usually starts its
sweep at a low frequency, 5MHz and sweeps up continuously
right up to 30MHz and possibly beyond. Does anyone know
what this is and where it comes from?

217. woodpecker oops

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-06 01:12:16 UTC
From: gardner@physics.ubc.ca
Message-ID: <2nt29g$7a@nntp.ucs.ubc.ca>
Source record: 268784

Oops, I made a small mistake with the date. The new signal
came on in late 1990 dec. 20 and continued from time to time
for probably testing etc. and ended in late 1991. The
signal was not heard in most of 1990. The old 10.5 pr rate
system ended around the first week of december 1989.

Greater than 2 MeV Electron Fluence for 05 APR is: 1.6E+09

SYNOPSIS OF ACTIVITY
--------------------

Solar activity was very low. There was no activity
of note. Region 7699 (S09W05), a single spot, was numbered.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at unsettled to active
levels for the past 24 hours. High latitude stations have
been at minor to major storm levels. This activity is most
likely due to a favorably positioned coronal hole. Energetic
```

electron fluxes (Gt 2 MeV) ranged from high to very high
for the entire period.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled to minor storm for the entire forecast
period. High latitude stations will continue to see minor to
major storm levels with a possiblity of occassional periods of
severe storm levels.

Event probabilities 06 apr-08 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 06 apr-08 apr

A. Middle Latitudes
Active 25/25/30
Minor Storm 35/30/35
Major-Severe Storm 30/25/20

B. High Latitudes
Active 25/25/25
Minor Storm 30/35/30
Major-Severe Storm 30/30/30

HF propagation conditions were below-normal from the
middle to polar latitude paths, and near-normal over the lower
latitude regions. Fading, multipathing, and occassional
absorption continued to affect the higher latitude paths.
Similar conditions are expected over the next several days.

-- -- -- -- -- -- -- -- --- ------
Uncorrellated: 0 0 0 0 0 0 0 0 001 (100.0)

Total Events: 001 optical and x-ray.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ --------------------------
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>still occurs, but the smart operator tries to vary the length and timing
>of his "this is" transmission, much like terminal node controllers use
>random number generators to vary the retry times on collided packets.

Thank you for elegantly proving my argument for me.

Why double the check-in time in the first place
with an extraneous phrase? Efficient communications
demand deleting extraneous verbiage and cutting
to the core of the message.

Clearly, if you are transmitting a signal
and speaking your callsign then it is *you*
who is doing it. It is redundant to say "This is";
who else could it be? Eleanor Roosevelt?

Yes, the smart operator knows how to eliminate
inefficient practices such as "This is" and
get right to the job at hand. He does not
need to vary the length of "This is" because
such a mechanism is already in place: his
callsign, which could require less time to say,
such as "NF3I", or more time to say, such as
"KA6WWY".

On FM, one station will be heard, the other won't.
You now have one check-in dispensed with. Ask
for the other station and you now have both
with minimum time wasted.

>Sorry to burst your bubble, but it really works.

My bubble is not the issue.

It is your traffic net which suffers.

>>accepted practice nationwide, is to key up and say "Here is" or

>One alternative, simply keying up and making a transmission, more often than
>not, results in even more wasted time.

Why? I have heard an argument similar to yours for
using "Here is" or a variant, but I need to know
why transmitting only a callsign results in
more wasted time than a transmission, a pause,
and another transmission.

Our weekly on-air meeting on the 147.18 repeater
accepts check-ins by callsign suffix
until the net control's buffer gets full.
It is not a traffic net, yet it is run
with enough structure that participants get
some idea of how a net works. Mr. Creely is
a big net hound and also operates MARS;
he seems to make things run smoothly
without the extra net bells and whistles.

WAIT A MINUTE! THAT'S IT!! "Here is" turns out
to be the net equivalent of "over beeps"!!

Mystery solved!

Source record: 268789
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Bid: $RACESBUL.320
Subject: SB320 Direction Finding in RACES

TO: ALL EMERGENCY MANAGEMENT AGENCIES VIA AMATEUR RADIO
INFO: ALL COMMUNICATIONS VOLUNTEERS IN GOVERNMENT SERVICE
INFO: ALL AMATEURS U.S (@USA: INFORMATION), CAP, MARS
FROM: CA GOVERNORS OFFICE OF EMERGENCY SERVICES
(W6SIG@WA6NWE.CA) Ph: 916-262-1600
2800 Meadowview Rd., Sacramento, CA 95832
Landline BBS Open to All: 916-262-1657
RACESBUL.320 RELEASE DATE: April 4, 1994

Subject: OPS - Direction finding in the RACES

Question: What role does direction finding have in the RACES, if any?

Response: Direction finding - the process of locating Radio Frequency signals by other radio equipment - has a tremendous role for Amateur Radio operators, particularly in urban areas. RACES units have been called upon to locate spurious signals from a variety of sources from malfunctioning equipment, such as stuck transmitters, to deliberate jamming of local government or other facilities.

One direction finding response involved successful location of a moving radio that virtually crippled a major police department radio system. One of the departments handheld radios moved from officer to officer as the shifts changed and as they moved about the city. The particular radio had a unknown habit of keying up at odd intervals while in the belt holster of the officer. Since the mike was against the officer's body, little could be heard in the way of sound but it was wiping out the entire system. Each time the interference went off the air, and the others on the frequency were advised to switch channels, so did the unknowing officer. Consequentially the interfering signal followed every move to a different channel. Until the problem was solved, the department thought they had a deliberate jammer, when in fact it was malfunctioning commercial equipment in an "impossible configuration that just couldn't happen" but did!

In addition to such uses for direction finding, as in the RACES type operations, there are others as well; the "fox hunt" (direction finding contest) of the local Amateur Radio club being an example. Such activities range from an ongoing "sport" to the

real preparation for serious and dedicated direction finding.
Both aspects have their place, but those who see "fox hunts" only
as a pastime and purposely overlook the serious nature of the
work that can be done, are a discredit to the Amateur Radio
Service whose primary purpose - as set forth in FCC regulations -
is public service. (eom)

A friend of mine and I were told that there was a convention in
Fergus Falls, Mn saturday April 9th but we haven't been able to get any
information about it. As we are yet unliscenced (hoping to test at the
convention) it has seriously limited our ability to find out about it. All
we can do is listen to people mention it in passing on the radio. So, if
someone has some information (I know it's very soon) and would mind sending
me at least some sort of time schedule I would be very greatful. Hopefully
we will both be able to pass the examination. Thanks in advance.

>to 95 percent of Americans, up from 75 percent now. Vice President
>Gore said the weak link in Sunday's storms, which killed at least
>43 people in the Southeast, was the inability to get the word out.

Since I live in the area of the tornados, I'll say that Al Gore doesn't know what he's talking about. (no surprise) The area of the tornados is served well by 3 NWS stations, and numerous broadcast stations tied to the EBS system. The problem is that people weren't listening to the warnings being issued.

Unlike hurricanes, tornados strike very limited areas. They can level the house across the street, and leave yours untouched. Since we have many tornados in this area, and since tornado alerts are broadcast with nearly every thunderstorm, people have grown accustomed to *ignoring* the warnings. More NWS automated transmitters won't help that situation.

In recent years the NWS has *reduced* the number of radar equipped originating stations and replaced them with automated relays from a few weather service offices. That means that good localized weather reporting has declined. So people have increasingly quit monitoring their local automated server. If Al Gore wants to really make a difference, he'll reopen the local weather offices so people will again get useful reports on their local weather conditions. Then they may start listening again.

(When some regional reporting station relayed over your local NWS automated transmitter is saying partly cloudy, and you've got 4 inches of partly cloudy on the ground and more falling, you begin to lose confidence in the system.)

Better still, make *use* of the carrier to implement ACSSB compandoring.
Do the final notching at the receiver. Naturally audio quality would
suffer with a notch at 1800 Hz, but that won't hurt communications
effectiveness much.

As an alternative, you might consider the Yaesu FT-11R. I've been
real pleased with mine.

In a side by side comparison with the TH-22 from the Ham store a local
ham told me I was stronger and clearer into a distant repeater with
the FT-11 than with the TH-22 (despite the lower power output of the
Yaesu!!). Since I have had it, I've generally run it on low power
(300 mw) from home, whereas on my old HT (TH25A) I would almost always
run the full 2 1/2 watts out. Programming is also easy once you get
used to using the keypad for that purpose. I have had no trouble yet
with intermod but I haven't used it mobile and I haven't yet taken it
into "intermod alley" near my home. I'll have to try that soon.

Price of the two rigs is about the same. When you start adding
accessories, though, the Yaesu is clearly more expensive.
Nonetheless, I'm not sorry about it; I think it's worth it.

>specifically single out handle helds as a seperate item.
>
>
The exact reference is FAR 91.21. This section prohibits the use
of all portable electronic devices except voice recorders, hearing
aids, pacemakers, electric razors, or (and this is the important
part) "any other portable device that the OPERATOR of the aircraft
has determined will not cause interference with the navigation or
communication system of the aircraft on which it is to be used."
I capitalized operator because most commercial airlines have rules
regarding operation which take it out of the pilot's hand.
However, private operations are normally dictated by the
pilot-in-command (I operate from my aircraft quite often).

It is also important to note that this rule only applies to aircraft
being operated commercially or on any aircraft being operated IFR
(instrument flight rules).

Hope this helps. You will see many claims about operating in the
air on commercial aircraft with "no harm done". In the USA, this
is ILLEGAL on all of our domestic carriers. Also, taking the
stance that "it never caused any problem when I did it, so it must

be ok." is looking the problem with blinders on. Nearby RF transmission affects all receivers, if not by direct interference, then by desensing the front ends. 99% of the time, there will be no harm done, but that 1% can be deadly in an aircraft! Talk to an airline pilot about those laptops and CD players that are now banned by some airlines during departure and approach. Even the low amount of RF from those devices can cause havoc in the cockpit.

By the way, the rule is a FLIGHT rule, therefore there is no restriction on operation in and around airports (other than the normal interference rules).

Hope this helps.

73,
Pete WB0FEW

PS. Cellular phones are illegal to use in the air by FCC regulation. There are NO exceptions to that rule in the USA.

236. Radio Shack DSP

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-06 12:56:08 UTC
From: jwa@tellabs.com
Message-ID: <1994Apr6.125608.5212@tellab5.tellabs.com>
Source record: 268803

Radio Shack is in the DSP race with their new DSP-40
noise reduction system.

It's a black box with a speaker, 12 volt and input chord.
It has 2 three position switches and a volume control.
One switch selects wide, medium and narrow. The other selects
CW, SSB and NR.

The CW position selects narrow audio filters and allows a
CW tone to pass. The other positions (SSB and NR) reject CW
or heterodynes and provide a noise reduction filter. The other
switch selects the filter bandwidths. The volume knob controls
the audio level and there's a 5 watt internal amplifier/speaker.

The unit does a nice job nulling carriers but does very little
noise cancelling. The narrow CW mode works fine but the I.F.
filter in my Kenwood 440 does a much better job. The unit
makes a great mobile speaker for my H.T. and it runs on 12 volts
but $80.00 is a little steep for a mobile use. I purchased it
so I can compare it to the Hamblaster which does a much better
job reducing noise.

Inside is a PCB that's partially covered with a sheild. Under the
bottom sheild there's a Texas Instruments chip with unknown markings.
It's probably a custom chip with a TMS320C10 core. The top side
probably has the A-D/D-A. I didn't look at the number.

237. Icom 2SRA

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-06 13:13:06 UTC
From: lieser@iccgcc.cs.hh.ab.com
Message-ID: <1994Apr6.081306.1@iccgcc.cs.hh.ab.com>
Source record: 268804

I'm planning to take my first (Tech) exam in the near future, and
was thinking of buying an Icom 2SRA so as to have some scanner
coverage in addition to the ability to transmit on 144-148MHz.
Are there any problems with coupling a wide-coverage scanner with
the transmitter? Is the 2SRA easy to use, and is its performance
good? I'm wondering if I should just go with a simpler (and cheaper)
rig.

Thanks in advance,
Ed Lieser

>to the core of the message.

Efficiaent communications also demands standardization. This works quite well for our net. I guess your mileage may vary. It doesn't double the check-in time. On the Southeastern Michigan Traffic Net, stations checking in have additional information beyond their callsigns to give NCS (no traffic, traffic for so-and-so, etc.). If we didn't require this little check for doubling, there would be many more repeats on information needed. We've had people do it both ways, and the "this is" method has proven to be the better method.

I guess you should use whatever works. This works for us.

>large RC plane. HI-HI. The airline also does not want you to use your
>cellular telephone in flight. Why? So they can make big bucks on the
>in-flight phone.

it's more than that. the cell radio system doesn't like having users accessing more than 1 cell at a time (ideally). when you are up in the plane, you are able to hit hundreds at the same time. This gives the cell system a hernia since it's not set up for such a thing -- i would think the cell radio security people would turn off your ID since such multiple access could be interpreted as your phone codes had been picked up by a phone phreak and others were trying to use your phone for free calls.

it's not like the cell radiophone folks don't make big bucks on your calls either...so don't go blaming the airlines & service providers that have set up flite-phones.

if you can't be out of touch for even a couple of hours, why are you even getting on a plane in the first place?

The thread refuses to die because people make wild statements
they only THINK make sense.

In reality you cannot operate your ham walkie-talkie in
flight operating under IFR. Read your FCC regs that you
ought to check before you reply. The pilot has no authority
to authorize you to violate the FCC regs. 99% of the
time commercial flights operate under IFR regardless of
the weather conditions.

Isn't there a way to FTP the FCC regs? Do it and grep
for IFR.

I wouldnt admit to too many federal law violations on the
internet either!

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: Now this is much better. The ends are horrible of course, but in the
: region 600-2400 Hz there is only a delay delta of 0.014 ms. That's
: hardly audible at all to someone with *good* ears.

For some points in my table, I get the following approximate group
delays:

Freq, Hz Group Delay, ms
200 1.09
400 0.57
800 0.31
1600 0.15
3200 0.07

Dunno how Gary got 14 microseconds; you'd have to have better-than-
golden ears to hear that, from reports I've seen. Anyway, the numbers
in the table above are from

group-delay (seconds) = d(phase [radians])/d(frequecy [radians/sec])

As expected, they go essentially inversely with frequency.

: I'd note that this
: matrix phase shift network is considerably more complex than typical
: networks found in older phasing type equipment. And as Richard Karlquist

I recall having the values used in the B&W phase shift network around
somewhere, but couldn't find them. I wanted to put that into Spice
originally, cuz it would have been a lot simpler than that "matrix"
network. Can someone supply the values? I'd be happy to run them
for comparison.

: the rest is reasonably straightforward without any expensive bits. SBL1 mixers
: are cheap, so the fact that you need four shouldn't be prohibitive.
: Dave
: --

This avoids the need for broadband (multi-octave) phase shifters but
still leaves the need for precise amplitude matching to get accurate
cancellation of the unwanted sideband. The required amplitude and phase
matching to get comparable suppression to a reasonable quality filter
exciter are both severe. You can adjust to get best cancellation, but
this still needs it to be stable and for all frequencies to cancel at
the same position of the adjuster.

An attractive compromise is to use a phasing source (polyphase
network, weaver or whatever) to get modest suppression of the unwanted
sideband, the clipper section of the RF speech processor, and finally a
wide-ish lower than usual filter. We get the sum of the suppression
factors of the two systems, the transmitted audio has benefitted from
passing through a much lower Q filter than would be needed by a simple
filter type exciter.

I think this debate is nearing its best-before date, ADCs to digitise
speech are widely available and cheap. DSP devices capable of
implementing an SSB modulator with "RF" speech processor are available,
but still a bit pricy yet. DACs to give an IF output with plenty of
dynamic range are also available and getting cheaper, especially if a
low IF is used. A complete system has the promise of being cheaper for
manufacturers than a single crystal filter, and will also handle lots of
other modes.

Remember how VFOs were dropped the moment synthesisers became cheaper
than a dial and gearbox ? and how only a few people seemed to care
that those synthesisers were so dirty ? With a bit of luck this
change might be done better.....

>
> -- Darrell NR3Y.

Actually the proposal involves the no man's land above CB (27.41) and
BELOW the amateur 10 meter band which starts at 28.000. Can you imagine
anyone trying to operate a reliable data radio service in a band which:
A) talks around the world when the sunspot cycle is semi-friendly;
B) is populated with an estimated 150K illegal transmitters of power
output levels from 4W to 4kW;
C) gets virtually no enforcement action from the FCC because the offical
occupants are federal governemnt stations not under the jurisdiction of
the FCC.

Maybe Bill Gate$ can afford to BUY all those interfering stations from
their illegal operators, in which case he then could also pay a
significant portion of the national debt and evict the Feds too! Or the
ARRL could convince him to fund a nationwide improvement of NTS/AMPR and
get the FCC to allow resale of time on the new digital traffic network!

No, this is NOT an April Fool article! 8-)

: That's because you didn't tune *high* enough Cecil. :-)

: The amateur satellites are extremely predictable, can offer near
: global communications, don't require maximum legal power, and aren't
: as much at the whim of the solar cycle. The phone companies quit using
: high power HF SSB for international circuits years ago. It's time more
: amateurs learned they don't need that sort of setup either to work
: stations in other countries.

True, but the poster wanted to communicate according to their
schedule, not the schedule of some satellite(s). A couple
of geostationary satellites would do nicely toward filling
this need, but I don't see the $$$ being available for it
anytime soon. In fact, I think AMSAT would like to see
more contributions for the Phase 3D satellite...

Amateur radio is generally a poor way of saving money spent on
telephone bills. Yes, there have been people that have done it,
but for each case it which it works, there are numerous examples
where it won't.

Subject: PCBoard Artwork and LASER Printers
Date: 6-April-94 (Wednesday) 8:17:55 PDT
Answer to: David Shalita:ES AE:Xerox
In reply to: D.R. Shalita:ES AE:Xerox

Note: Hi,
I'm attempting to make at home, small PCBoard artwork for QRP
and Homebrew projects using TONER TRANSFER IRON-ON mylar
film products. I am a PADS Shareware User, and now will also
try using EASYTRAX to generate the PCBoard artwork files.

Just as I am getting started;
My old dot matrix printer died, so MUST purchase a replacement
printer. This will be my personal printer, so on small budget,
am trying to purchase the most capable compatible printer
my dollars will buy.

A Laser Printer is a must since I will be using the IRON-ON toner
transfer materials. Am I correct in assuming that less costly
INKJET printers are not usable, unless I copied every PCBoard
image onto the IRON-ON sheets on a plain paper copier....knowing
that there will be inaccuracies from copying?

An HP 4L (1 mbyte ram) or an EPSON ACTION LASER 1500 (1 mbyte ram)
seem to be 2 possible affordable printers. I am concerned that
both printers may not have enough ram memory for PCBoard
artwork and GIF files for fun.

My PCBoard files from PADS seem to be around 240 kbytes when
output using the HPIIP mode. GIF files seem to be from 80 to
700 kbytes. Ram memory versus file size....?

Is anyone out there doing PCBoard artwork on either of these LASERS
or an other brand that is equivalent or less expensive and equally
usable?

Another question.
What software will work to do the INVERTING of the arwork image?
I do not see that capability in PADS and am not sure with EASYTRAX.
Some Shareware Paint program?

Any thoughts will be very helpful.

Thanks and 73

Well, our internal LAN was put together as an experiment. Not all
staffers are on it, including some you probably want to talk to anyway.
(Shipping Department, mail room, etc.) For any function, you can
usually find someone on our list who is willing to respond.

The notable exceptions are Perry Williams (retiring in about 3 weeks
anyway) and W1AW. They rely on MCI or CompuServe.

Those who have an address, read their email. :-)

We are in the process of installing a "real" commercial LAN over
the coming months, so ultimately everyone who has a computer
will be available by email. Of course, there may be a few who don't
have a computer, but that is another flame war.

> such as "NF3I", or more time to say, such as
> "KA6WWY".

Even in the latter case, there's no need to take the longer time; the practice only shows up in such situations as net check-in, in which case the full legal ID isn't needed. KA6WWY could just check in as "WWY" on the first go-round, and when net control gets back around to acknowledging the check-ins either note the full call (if recognized) or ask for the full call (if it wasn't). For example, I might participate in the following exchange when checking into the local traffic net:

"N0XXX, net control, now taking check-ins for the Northern Colorado Traffic Net...."

"EW"

"EW, net control"

"KC0EW, Bob, Loveland, no traffic"

Or if net control recognizes the call (or maybe just my voice):

"Recognize KC0EW...Bob, any traffic?"

"No traffic"

...since control already in this case knows who and where I am. If I had emergency traffic, of course, I would certainly state that as early as possible - probably when first checking in.

There's NOTHING more frustrating than trying to sort out three overlapping attempts at checking in, each of which consisted solely of "This is"! :-)

I agree with Tony -- cable systems these days are positively paranoid about "egress" problems because the FCC has been cracking down hard on operators that don't fix their leaks. When you call be sure to ask for the chief technician (they say "technician" in the cable biz, not "engineer" as in broadcasting) and tell him whatever you can about where you heard the carrier.

>using "Here is" or a variant, but I need to know
>why transmitting only a callsign results in
>more wasted time than a transmission, a pause,
>and another transmission.

Well, I'll take a shot at an explanation. Try this scenario: 4 stations
(A through D) each want to check in and each has 2 or 3 traffic items to
list.

A and B both key up at the same time, give their calls, and go straight
into listing their traffic. Both are about equal signal strength, so
no one really gets through. A only had 2 to list so he stops first.
Then the tail end of B is heard, listing his third piece of traffic, but
no one knows who he was. When he is done, C and D commence, and the same
thing happens. After them, maybe a few more stations would try to checkin.
To prevent chaos, the Net control would have to step in after every few
stations to get repeats on what he had missed. This is the scenario
I had in mind by "more often than not, ...even more wasted time."

The argument was given that the stronger station will be heard
over the weaker. My observation has been that the dueling stations
are evenly matched nearly half the time, and neither is intelligible.

Don't get me wrong. I don't want to be in the position of defending
the practice, but I have observed that "here is" seems to work.
It appears to enable more stations to check in before the net control
has to come back, and that makes for better efficiency.

One net I know of has developed the practice of saying "good evening Joe",
dropping the carrier, then proceeding with callsign and traffic list.
(Assuming Joe is the name of the net control station.) Hard to believe
how annoying it is to hear "good evening Joe" thirty or forty times.

I'm not sure how your net works on 147.18; does each station check in
with only a callsign, then wait for the net control to come back later and
ask if he has anything to list? If this is the case, then certainly it
makes no sense to put "here is" before the call, if the call is all you
are sending. But if the initial call also includes an info list of
some variable length, then my A-D scenario above seems like a real strong

possibility.

> DSP and converting the 'mixed' output back to analogue for injection into
> the RF mixers?

I figured you could do it at a low "RF" frequency of a few 10's of kHz
and then heterodyne it up to the radio's IF frequency.

David Stockton (dstock@hpqmoca.sqf.hp.com) wrote:

: David Hough (dave@llondel.demon.co.uk) wrote:
: : Why not use a Weaver (Third Method) exciter? ...

: This avoids the need for broadband (multi-octave) phase shifters but
: still leaves the need for precise amplitude matching to get accurate
: cancellation of the unwanted sideband. The required amplitude and phase
: matching to get comparable suppression to a reasonable quality filter
: exciter are both severe. You can adjust to get best cancellation, but
: this still needs it to be stable and for all frequencies to cancel at
: the same position of the adjuster.

Except that the "unwanted sideband" does not fall into an adjacent
channel as it does with the "first" and "second" methods of SSB generation.
Since the unwanted sideband folds back into the wanted sideband, poor
rejection shows up as audio distortion, rather than adjacent-channel
interference. A Weaver SSB generator should achieve around 40 dB
suppression which amounts to around 1% distortion. I think that's
rather better than most SSB rigs currently achieve.

: An attractive compromise is to use a phasing source (polyphase
: network, weaver or whatever) to get modest suppression of the unwanted
: sideband, the clipper section of the RF speech processor, and finally a
: wide-ish lower than usual filter. We get the sum of the suppression
: factors of the two systems,
... less the amount of clipping used.
If the phasing generator has 30 dB suppression, there is 20 dB of clipping,
and the post-clipping filter has 30 dB suppression, you get a total of
40 dB suppression, not 60. However I agree it shouldn't be hard to get
such a system to be plenty good enough.

If you just want the callsign server telnet to callsign.cs.buffalo.edu 2000.
No password is required on that port. However the 'buffalo' callsign server is
from April 1993 and is out of date. There is a more up to date server (October
1993) at pc.usl.edu 2000. Both servers work exactly the same.

Scott Statton already posted the relevant FARs (Federal Aviation Regulations) -- on non-air carrier flights, it's the pilot or operator's call; when it's a commercial carrier, it's the operator's call, and the answer is generally "no".

The people arguing about gain, ERP, and whatnot are ignoring the fact that lots of the stuff that screws up nav systems isn't going through the antenna or the power amp, it's leaking out of the back of the radio, and might not be that different for your HT or your kilowatt WeenieBlaster. Actual physical proximity really is the big factor. (Borne out in practical tests, but my plane likes the 32at for the most part anyway...)

But, I'm still wondering how such poor English can be acquired
when almost all broadcasting and newpapers does not indulge in such
flights of misuse.

It is said that in the USA WE SPEAK ENGLISH... well, I've heard some
JAs and many Eurpeans do better with English as a second and third
language as 60% of American hams can do with it as their first.
****

I hope this is intended to be humorous, "newspapers does not indulge"??
Shouldn't it be newspapers "don't" or even more appropriately "do not"?

....And, in the second paragraph above, I believe "Eurpeans" is probably
meant to be "Europeans." --Perhaps you spoke to soon about proper
English. Don't misunderstand, I agree with you, people definately could
use some brushing up on the old rules. However, they are not going to listen
seriously to people who are using bad grammar and making spelling errors
themselves.

Just a thought or two,
John

Makes sense to me ... but ... didn't make sense to the FCC I guess.

Perhaps part of the general philosophy of "I refuse to take responsibility for my own actions, so you better figure out how to blame someone else."

Expect to see a BIG increase in the use of authentication keys on your local packet BBS "real soon now".

How many bps / hz does it require to be considered "high speed"?
We have some systems running at 1.5 to 3 now ...

If by high speed is meant "fast enough so it is not reasonable to expect
the control operator to hit the switch before it is too late." then we have
lots of them on air already.

Well ... at least we do here in the Pacific NW ...

... Hank

Sorry, but I have to disagree with you on this one. Does a religious radio club, or a club for amateurs of any other special interest, undermine the nature of a "radio hobby"? Does it undercut the purpose of amateur radio if a club exists for, say, veterans? Is that pushing the military "in my face"? Is it pushing religion "in my face" to read an ad for a Jewish or Mormon Amateur Radio Club? Of course not. It seems perfectly reasonable to me that hams of similar interests or background would want to meet each other. No one was advocating the discussion of graphic sexual acts on the air. There has been no issue of bad taste about the LARC ad which has appeared in other publications. If you don't want people pushing their lifestyles onto others, then live and let live.

Another interesting case is to start with a conventional elliptic function
bandpass response, then proceed to the two networks with flat group delay
and 90 degree phase difference, keeping the nice elliptic magnitude response.
The finite jw-axis zeros may well wreak havoc -- with the number of poles
and zeros (for the same overall tolerances on amplitude and phase errors as
you have above) increasing significantly.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 6/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 6 APRIL AND FORECAST UP TO 9 APRIL

IPS Warning 10 was issued on 31 MAR and is still current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 073/009

1B. SOLAR FORECAST
07 April 08 April 09 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled til 06UT then active to
minor storm levels were observed.

Estimated Indices : A K Observed A Index 5 April
Learmonth 31 3345 5544
Fredericksburg 33 24
Planetary 40 31

Observed Kp for 5 April: 4455 4435

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
07 Apr 35 Active to minor storm.
08 Apr 25 Active.
09 Apr 18 Unsettled to active.

2C. MAGNETIC COMMENT
None.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 Apr normal fair-normal poor
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
07 Apr normal fair-normal poor
08 Apr normal fair-normal poor
09 Apr normal fair-normal poor
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted with 30-40% depressions at 00UT
and 18-19UT.

Observed T index for 06 April: 25

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
07 Apr 30 Near predicted monthly values.
08 Apr 35 Near predicted monthly values.
09 Apr 40 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
None.

You just did. How about just ignoring them. How hard can it be to skip
over a fucking ad buried on a page full of advertising?

QST is full of ads that I find annoying or useless. Henry Radio for example.
It takes no talent to shove the page over and continue reading the rest of
the article I was reading rather than have an apoplectic seizure over it.

73 es GE to the more reasonable types on the net.

From: stan@nebulus.ampr.ab.ca
Message-ID: <Cnv75r.AL6@nebulus.ampr.ab.ca>
Source record: 268939

HELP!
I have a Standard GX3000U(AA) that I would love to use on the
Amateur band. Unfortunately, the Standard EPROM burner and software
don't currently like this freq range.
Any Ideas?
Has this been done before?
If so HOW?

Help or ideas would be greatly appreciated.

Thanks.....73.....Stan VE7HHk

281. Any Amiga Hams out there??

a mailing list of Ham Amiga users... thanks in advance..

282. Fiber Optic with IC-901

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-07 02:00:41 UTC
From: djk@bobsbox.rent.com
Message-ID: <060494w2200@bobsbox.rent.com>
Source record: 268941

I have been working on an office of emergency communication setup using an Icom IC-901 with the fiber optic link option. We have access to a 100 foot tower on building 500 feet away making the fiber option the most practical solution. Unfortunately Icom does not provide a cable over 64 feet. the tech support at Icom recalls an Alaskain group making a 800 foot connection using fiber. They could not remember who they were or what they used to do it (glass or plastic).

If anyone has knowledge or experience with fiber optic I would appreaciate any information that could be provided. Please send responses directly to me. I will post a follow up on the success that I have.

283. Re: FT-530 DC CONNECTOR

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-07 02:05:04 UTC
From: sadams@eis.calstate.edu
Message-ID: <2nvpog$5vh@eis.calstate.edu>
Source record: 268942

According to the Yaesu manual:

The E-DC-5A connects the EXT DC Jack on top of the transeiver to a car
lighter socket, to provide operating and battery charging voltage
from the automobile electrical system or another DC source.

What is "another DC source" mean?? Can this adapter also be used for
other sources??

Page 14
The E-DC-5A or another cable with a 3.5-mm coaxial plug that matches the
EXT DC jack can be used to operate the transeiver from a source capable
of providing 1.5 amperes at 5.5 to 16 VDC.

Will the FT-530 be OK if I use 16 VDC??

Will there be a power output increase with 16V?

Does anyone out there have an E-DC-5A adapter?

Steve Adams
sadams@ctp.org

284. 6 meters

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-07 02:06:57 UTC
From: djk@bobsbox.rent.com
Message-ID: <060494b2206@bobsbox.rent.com>
Source record: 268943

I'm interested in trying out 6 meters but have a limited budget. Does anyone know of a way to easily use an IC-725 or IC-W2A to try the band out? Preferrably with low risk of ruining the radio.

285. FT2400 mic connector pinouts?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-07 02:24:54 UTC
From: der@anomaly.sbs.com
Message-ID: <2nvqtm$rks@paperboy.ids.net>
Source record: 268944

Does anyone know the pinout for the modular connector on the 2400?
I want to build an 8-pin din adapter for it but didn't get the docs
with the radio.

Please email replies as I don't get to read news too often.

Thanks,

Dave

286. Free Access to the USGS 3 Arc Second Terrain Data is BACK!

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-07 02:36:31 UTC
From: rich@comm-data.com
Message-ID: <2nvrjf$dar@cds.comm-data.com>
Source record: 268945

God, I don't know why, but I am offering free access for Amateurs
to my 3 arc second terrain data base again!

Here is the skinney:

TERRAIN_HAM 12/19/93 - This program performs terrain profile retrieval
and average terrain calculations using the Defense Mapping Agency/
U.S. Geological Survey 3 Arc Second Terrain Database.

Communications Data Services, Inc. ("CDS") has made this program
available to amateur radio enthusiasts at no charge. If you wish further
access to terrain data, we offer use of this program at very reasonable
rates. Please call us to set up an online account. If you use this
data in a publication, please give credit where credit is due.

CDS employees many hams working in the communications engineering industry,
providing online services, Real World Propagation Studies, 3 arc
second terrain data on CD-ROM, and FCC and FAA databases for PC.
Our company is kind enough to offer this resource for the advancement
of the science of communications. Please don't abuse this offer.

WE REQUEST THAT YOU DO NOT USE THIS DATA FOR COMMERICAL PURPOSES!

Rich Biby, KD4DSX

Telnet (yes, I got telnet working!!! -- no more long distance charges!!)
to online.comm-data.com. Login as "ham". It will ask for your your name
and call sign. Please -- keep it honest (and clean). Too many bumb comments
and this servie will disapear.

The program now allows you to A) enter two points by latitude and longitude
or B) enter a reference latitude and longitude and a distance and bearing
for the second point.

I have not fully checked this "ham" version out, so it something seems
strange, please ask.

I do have Canadian and Mexican terrain data, but by contract with each
government I am not allowed to do some things with it. However, for our
friends North and South of the boarder, if you got a project that gets
my attention, I can run the profiles for you and give you the results.

Enjoy in good spirits. I hope this will help to advance the art of communications.
I do have some other "kool" propagation and terrain averaging tools I

will consider releasing for coordination jobs, repeater groups, and other reaserch/public interest projects. I have been flooded with requests in the past, and honestly, I got to be kind of pickey or I'll never get back to work. I want to write something for QST about this and let people know it is avilable -- so let me now the kinds of success/problems you have.

For anyone without net access, you can also dial in to 703-532-3744.

Good luck (I am a former nocoder and refuse to sign with '73s')

Happy Airwaves

287. Multiple radios, single antenna...possible?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-07 02:52:08 UTC
From: jrw@cyberspace.com
Message-ID: <2nvsgo$45l@cyberspace.com>
Source record: 268946
Cross-posted to: rec.radio.cb,rec.radio.amateur.misc

I have a situation where I have three CB radios, only two of which I use with any regularity, that I would like to connect to the same antenna. I know that this will not affect receive capabilities except in the case of some nominal line loss, but is it acceptable to keep the radios hooked in tandem like this for transmitting? Are there antenna switchers that can handle this sort of arrangement if keeping both radios online at the same time will cause problems? Any information I can get on this would be helpful since more than a few people in my area are interested in doing the same sort of thing.

I've lost the attribution here -- I think someone got it wrong...

In a previous article, some idiot (perhaps Julian, but I'm not sure) wrote:
:>
:> I of course have operated my walkiie-talkie from commercial
:>aircraft. I have done this since 1974. I have even operated my 2M
:>walki-talkie from the flight deck. I am still here, isn't that
:>amazing.
:>

And Bob Levine replies...
>
> Isn't there a way to FTP the FCC regs? Do it and grep
> for IFR.
Jesus -- if there is >ONE< book a ham should own, it's a bleeding copy
of Part 97 ... Call up your GPO & get it at a subsidised rate. or buy
the ARRL version with all their annotation for $9 at your nearby HRO.

I recenlty quoted the approprite FAA regulation, and here is the FCC
reference to it...

Begin Quote

97.11 Stations aboard ships or aircraft.

(a) The installation and operation of an amateur station
on a ship or aircraft must be approved by the master
of the ship or pilot in command of the aircraft.

(b) The station must be seperate from and independent of
all other radio apparatus installed on the ship or
aircraft, except a common antenna may be shared with
a voluntary ship radio installation. The station's
transmissions must not cause interference to any
other apparatus installed on the ship or aircraft.

(c) The station must not constitute a hazard to the
safety of life or property. For a station aboard an
aircraft, the apparatus shall not be operated while
the aircraft is operating under Instrument Flight
Rules, as defined by the FAA, unless the station has
been found to comply with all applicable FAA rules.

End quoted text.

I'm impressed that someone has the superior intelligence to willfully violate both amateur regulations AND the FARs.

290. Daily Summary of Solar Geophysical Activity for 06 April

Greater than 2 MeV Electron Fluence for 06 APR is: 2.4E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low. There were no events
of note for the entire period.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at active to minor storm
levels for the past 24 hours. High latitude stations saw
major to severe storming. This activity is most likely due
to a well positioned coronal hole. Energetic electron fluxes
(GT 2 MeV) ranged from moderate to very high for the period.

Geophysical activity forecast: the geomagnetic field is
expected to be active to minor storm at middle latitudes and
minor to severe storm at high latitudes.

Event probabilities 07 apr-09 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 07 apr-09 apr

A. Middle Latitudes
Active 30/20/30
Minor Storm 35/40/30
Major-Severe Storm 20/25/15

B. High Latitudes
Active 30/15/30
Minor Storm 35/35/30
Major-Severe Storm 25/35/20

Below-normal propagation conditions persisted over most
regions today from the middle to polar latitude paths.
Continued geomagnetic and auroral storming will keep the
quality of propagation over these paths at below-normal values
for the next 3 days, through 09 April inclusive. Minor
improvements might begin to be observed over the middle
latitudes on (and particularly after) 09 April. Until then,
similar degraded propagation can be expected.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,

Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>Well, I'll take a shot at an explanation. Try this scenario: 4 stations
>(A through D) each want to check in and each has 2 or 3 traffic items to
>list.

>A and B both key up at the same time, give their calls, and go straight
>into listing their traffic. Both are about equal signal strength, so
>no one really gets through. A only had 2 to list so he stops first.
>Then the tail end of B is heard, listing his third piece of traffic, but
>no one knows who he was.

If the voice is not recognized, certainly whatever identified
the third piece of traffic is the clue to whom transmitted last.
I assume net control is competent enough to do this.

I can't imagine listing details of traffic at check-in
time. All that is necessary is callsign and "traffic/no traffic";
the rest can be handled when it is your turn to pass traffic.

>When he is done, C and D commence, and the same
>thing happens. After them, maybe a few more stations would try to checkin.
>To prevent chaos, the Net control would have to step in after every few
>stations to get repeats on what he had missed.

If it takes net control this much time to figure out
that some control is needed, then that net is pretty
bad shape already, sorry to say.

>The argument was given that the stronger station will be heard
>over the weaker.

I was speaking of FM, and repeaters in particular,
where capture effect or voting give one station enough
chance to be recognized by voice, callsign, or other
attribute. Experience bears this out.

>I'm not sure how your net works on 147.18; does each station check in

NC: "I will now take listings of suffixes A through F."

"KK3F, no traffic."

"N3EJT, no traffic."

...and so on until check-ins from that suffix group
are exhausted. Then, net control continues with
later parts of the alphabet. When all stations
have been checked in, he calls individual stations

who said they had traffic.

I suppose it works too simply for those who have
become accustomed to less efficient methods.

I'd hate to see our traffic nets deteriorate into
symbolic procedure-fests which communicate less
than they were otherwise capable. Let's teach
the newcomers good operating technique while
the opportunity exists.

To all radio amateurs

SB QST ARL ARLB030
ARLB030 FCC amends packet rule

FCC Amends Rules Concerning Message Forwarding Systems in the
Amateur Service

In an April 4 press release, the FCC announced that it has relaxed
the amateur service rules to enable contemporary message forwarding
systems to operate at hundreds of characters per second while
retaining safeguards to prevent misuse.

A message forwarding system is a group of amateur stations
participating in a voluntary, cooperative, interactive arrangement
where communications from the control operator of an originating
station are transmitted to one or more destination stations via
forwarding stations, which may or may not be automatically
controlled.

Currently, the control operator of each station is held individually
accountable for each message retransmitted, resulting in unnecessary
content review and delays.

The ARRL, in commenting on PR Docket 93-85, stated that the
obligation of the control operator of the first forwarding station
should be the establishment of the identity of the station
originating the message. Only when this is not done should these
control operators be held accountable for improper message content.

Also, there is currently no central supervisory authority in an ad
hoc amateur service digital network, making these unsupervised
systems easy targets for misuse by uncooperative operators and
nonhams.

Moreover, the Commission said that it could be difficult to
establish after the fact that a particular VHF station originated a
fleeting high-speed digital transmission.

For these reasons, the Commission said there must be on-going oversight of the system and the control operators of the first forwarding stations are in the best position to provide such oversight.

Therefore, the Commission will hold accountable only the licensees of the station originating a message and the licensee of the first station forwarding a message in a high-speed message forwarding system.

The licensee of the first forwarding station must either authenticate the identity of the station from which it accepts communications on behalf of the system, or accept accountability for the content of the message.

The Commission also clarified that the station that receives a communication directly from the originating station and introduces it into the message forwarding system is the first forwarding station.

The League and the Colorado Council of Amateur Radio Clubs suggested that the Commission substitute the word ''simultaneously'' for ''instantaneously'' in the redefinition of a repeater. The Commission concurred and adopted this modification.

The Commission believes that these rule changes will enable contemporary high-speed message forwarding systems to operate as their designers intended, while retaining the minimum safeguards necessary to prevent misuse.

The effective date of the rules change has not yet been announced.

>
> anyone know where the official rules on this might be found?
David Vangerov, KD6WXQ

David,
I believe you will find reference to this in the Fedaral Aviation
Regulations (FAR) published by the FAA. I cannot remeber the exact part
number of the FAR it is in but, go to your local general aviation
airport and ask the clerk who sell pilot accessories that you wish to
purchase a copy of the FAR. I think it might be in part 75 but I am not
really sure, and my copy of the FAR is at home. I do know part 135 covers
commerical operations so, it might be in that section also.

73, Wes WB8CEH

Yes, but the part 97.11 also restricts the use of Amateur Radio transmitters
on aircraft:

97.11 Stations aboard ships or aircraft. - (a) The installation
and operation of an amateur station on a ship or aircraft must be approved
by the master of the ship or pilot in command of the aircraft.

(b) The station must be separate from and independent of all
other radio apparatus installed on the ship or aircraft, except a common
antenna may be shared with a voluntary ship radio installation. The
station's transmissions must not cause interference to any other apparatus
installed on the ship or aircraft.

(c) The station must not constitute a hazard to the safety
of life or property. For a station aboard an aircraft, the apparatus
shall not be operated while the aircraft is operating under Instrument

Flight Rules, as defined by the FAA, unless the station has been found to comply with all applicable FAA Rules.

.. and since most (all?) scheduled airlines always fly IFR, this effectively precludes us from operating.

Tom, WB2WZL

298. Question:ICOM 32AT Mod.

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-07 13:45:16 UTC
From: Alan.Spicer@f138.n369.z1.fidonet.org
Message-ID: <30843359@branch.fidonet.org>
Source record: 268738

Hello Hams!

I have recently picked up a used Icom 32AT handheld - of which I owned one once before. I am performing the following Mods::

Expanded RF/Cross Band Repeator/10 MHZ Entry.

I have the book: Radio / Tech Modifications - by Artsci Inc., and have followed their (one page?) mod. So I basically have the mod completed.

The Problem? Well this one page mod in this book is not very complete. I need to tune the radio for the higher end. They tell you in a two line "instruction" below the 10th step in the mod, to do the following:

(and I quote):
"Adjust C-510 to get .25 volts at UHF test point at lowest desired frequencie. C-510 is located in metal box. The test point is located next to the metal box."
[end quoted text]

it proceeds to show a diagram of the IC-32AT Logic Board, which was mildly helpful, however no diagram of this area where this C-510 is.

While I had the radio apart - I had it down to the RF section - all the way at the bottom of the radio (under that main board?)... and as far as I can see THERE ARE TWO (OR THREE?) QUALIFYING "METAL BOXES". No test point or C-510 is labeled.

Does anyone know where this test-point and variable capacitor is (for sure) ??

Also my previous radio same model was tuned by another ham (for a price) [which I am trying to avoid] - and he tuned other coils etc, however neither the mod-book nor Icoms included docs is much help there.

The mod seems to have worked ok (I think?) Except for being able to recieve higher on UHF, and there is no high-end tx on the VHF.

Thanks to anyone for any help! And if you have an info file - and can send it to me somehow please do. I'm on FidoNet at 1:369/138. and my bbs is up 24-hours on 305-938-7088. Internet aspicer@sefl.satelnet.org, or inca!sefl.satelnet.org!aspicer. All msgs are .forwarded to my mailer on FidoNet.

If you don't know (for sure) - save bandwidth! Don't answer! If you do - Netmail, or Email Replies are ok - unless the info will be helpful to the masses?

Alan Spicer / KA4UDX / Sysop CIIS - Command Interpreter BBS.

>curious as to people's experiences with the band, particularly here in the
>Bay area. I've listened to a few FM repeater outputs, but haven't found a
>lot of activity. How do people like/find the band?

I just got my TS-690 up on six with a simple J-pole antenna made
from RG58 cable. I trimmed it for the 52.4 transmit (about the
middle of the FM repeater input frequencies). There's at least
6 repeaters I can use from home using the single tone frequency
board that (the TU-8) is in the TS-690. There's probably other repeaters
I might be able to use if I used a different tone, but that requires
changing the DIP switch settings on the tone board.

I haven't tried any CW or SSB contacts, but plan to when I can
devote more time to build and erect a 6m beam antenna.

Frankly, I think the 6m band is ripe for much heavier use, especially
since much of the past TVI (channel 2) problems are less likely to
occur with so many residents now receiving their TV feed via cable.
One thing that will help generate more 6m activity is the better
availability of 6m equipment. Azden's new line of mobile and HT
units include 6m models (priced around $360 each) and Kenwood just
announced the TS-60 all mode 100 (or was it 90?) watt transciever.

I bought the TS-690 (Kenwood's TS-450 with 6m added) because I
wanted a very good HF rig and for only several $100 more you
get the TS-690 with 6m as opposed to the TS-450 without 6m.

Hopefully we'll see more rigs dedicated to 6m or including 6m.
I'd like a nice dual band mobile unit with both 6m and 2m.

Standard Disclaimer- Any opinions, etc. are mine and NOT my employer's.

301. Tweek & Calibrate Silent Play freqs!

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-07 14:53:18 UTC
From: mike@garfield.csuohio.edu
Message-ID: <1994Apr7.145318.29051@news.csuohio.edu>
Source record: 268964

I was fiddling with my Silent Play transmitter last nite and noticed that when I ran it through my RS RF frequency counter, it had a transmit freq range of 85.5 - 90MHz. This seemed strange since it's advertised as 89 - 93MHz (as well as it being outside FCC specs). I also verified at least the top 90MHz limit by tuning it into a digital frequency display FM receiver.

So, I discovered a way to crudely re-calibrate the frequency range of this device to get it back into specs.

1. Take the case off (two small black Phillips screws). Be careful of the two plastic molded-in tabs on the opposite edge. You have to twist the case a little, but don't break the tabs.

2. Remove the screw holding the circuit board (near same edge of case as the two plastic tabs). Be gentle with the antenna connection since the wire is glued to the case and then soldered to the board. It flops around while you handle the board.

3. Hold the circuit board with components facing you, oriented so the circuit board looks like a capital "P". The 1/8" stereo plug will be at the top, the two slide switches will be on the left edge.

4. At the very top right corner, just to the right of the slim LED and above a small capacitor, you will see a wound copper air-core inductor (it looks like a copper spring).

[At this point, I solved the mystery of why the tuning was out of whack on the transmitter: When I opened the case when I FIRST got the unit (to explore!), I noticed the coils of this inductor were bent, i.e., a few coils were pushed apart, as if done with a fingernail. I though I had done it myself accidentally when taking the thing apart, so naturally I pressed all the coils back together again. Mistake!!!]

5. It turns out that carefully bending the coils together and apart is what provides the calibration of the tuning range. There are no adjustable inductors anywhere to be seen, so this must be how they calibrate the unit at the factory. Anyway, I simply re-bent the coils apart and played with the tuning knob and bending some more until I got it back to the range 89-93MHz by watching my RF freq counter. It was pretty easy. If you don't have a RF freq counter, you could easily do it by tuning an FM receiver with a digital display (like one in your car), while the Silent Play is transmitting, while bending the inductor coils. Do a little at a

time.

Perhaps with some hacking, you could replace that simple inductor with an adjustable one to see how far you can shift the frequency range. I'm not gonna do this type of mod, but I did discover by waving my hand near the circuit board, I was able to get the thing to jump to around 150MHz in spurts, but who knows exactly what components were affected by my hand to make it do this (there are some ferrite core inductors too). This gizmo probably has little use outside the FM broadcast band anyway (unless you wanted to perhaps retune it up to the 2M ham band for some reason).

I also noticed that when I put the plastic cover between my hand and the circuit board, the freq remained stable again (maybe the plastic is impregnated with something conductive to shield the circuits from inductive/capacitive coupling from one's hand??)

6. When you put the cover back on, make sure the plastic fingers on the two slide switches seat properly back into their respective plastic finger-slides.

Another nifty hint:

The transmitter normally draws about 9 mA of current. I removed the silly LED and it dropped to just under 6 mA current draw, and did not affect performance or frequency. This could be useful not only in extending xmit time on one set of batts, but make it even easier to run the thing off solar cells if you're so inclined.

FYI, the receiver unit draws about 15 - 20 mA, depending on if the stereo LED is lit and the volume setting. I did get it to jump to a whopping 80 mA when I pulled the earphone plug out of the receiver half way - it must short the audio amplifier across one of the plug conductors causing it to pull full current thru the amp.

Hacking for no apparent reason,

Mike

Please, tell me, what bandwidth is it wasting? There is no extra use of
the backbone, or my modem ...

>It would be nice if Mark's info were on a Telnet database server, like a
>callsign server.

I have no Internet access at the moment, if I did, I would have written a
server years ago. Devon Bowen currently promised to do this sooner or later,
for the buffalo.edu site. I have no intention of forcing him to do it. However,
if someone here volunteers ...

I have an email server, another gent is setting up a WWW server, and there
is ftp access to buffalo.edu.

>That way you could do a quick look-up of other hams email addresses by name
>or callsign.

We want to see this database used as part of the callbook lookup servers. I
forsee a day that *I* will not have to do the work associated with compiling
the list, but when that day comes, we *only* lose the parsing I do of the
.signature lines. With the callsign database, and the articles flowing through
the system, this list *can* be maintained automatically and would not have a
person with an `ego' behind it :-). Setting up this automation is about
half done ...

Ciao -- Mark

>
>The exception is when someone has a feed that gets one of the groups and
>not the other. Then I agree, he might have a valid point if he says
>that it is a waste of bandwidth _on that link_.

Why, only if the article is *not* wanted in either one of the groups he
is reading. Purely subjective I would 'spose.

>Should the list go into r.r.i only? I don't really care. I would like
>to see it still posted, but it doesn't matter to me where.

A suggestion that may have merit to please the two camps I see forming in
the voting mailbox (I know, this can affect the straw poll): Post the list
once every 3 or six months instead, with a pointer every month. I would
prefer 6 months, with `diff' postings (I don't actually know how small these
will be, at the end of this month I will *see*) with pointers, but I am just a
lowly volunteer ;-/ and will *try* to accept the direction of the ham
community.

The full list still up to date at buffalu.edu and on the email server.

This discussion should probably be in the rra-wg list, but for some reason
non of my email is getting *to* the list, but I still see the list
submissions. I think the public airing helps form direction though.

Ciao -- 73 de VE6MGS/Mark -sk-

I beg to differ, but I think that in the USA - American is spoken. If you doubt that take any Englishman asside and ask him. The old saying that Americans and Englishmen are two people seperated by a common language has meaning.

>between when it is sighted and when a tornado warning is broadcast on TV.

OTOH, we often beat the automated NWS radio bulletins on the air. The
TV station I work for has it's own doppler radar, and direct wire connections
to the Severe Storm Center in Kansas City. It's not unusual for us to spot
the hook of a tornado on the radar minutes before an alert goes out on NWS
radio. And we can put SSC bulletins direct to air as soon as they come in
thanks to our First Alert computer system. It superposes a storm alert
symbol automatically on our transmitted picture showing the counties affected
by the alert, and we can crawl the actual warning text across the screen
with the click of a mouse. Our radar is also sent out full time on local
cable channels so viewers can watch the storm's progress themselves.

>From my listening experience, it seems that tornadoes TYPICALLY are short
>lived and do not remain on the ground long. I would venture to say that
>if you monitor only TV, you may as well just read about it in the morning
>paper the next day! I still can't fathom that so many of my neighbours do

>between a warning and a watch. I've even heard TV announcers say 'there
>is a tornado warning for the next 8 hours....'. If people would just use
>a little sense, storm deaths could be greatly reduced - using the services
>that are provided...

The problem is the "cry wolf" syndrome. There are so many alerts, we often get 10 or 12 a day at the station when there's no really threatening *local* weather in evidence, that people begin to ignore the warnings. I don't know how to solve that problem. Failure to pass along warnings when in fact a tornado does result would be negligence. But the fact is that there are too many warnings and too few tornados that strike in a particular location. People's immediate concerns are local. When the warnings are "cry wolf" for their specific locations too many times, they stop listening.

The only solution I can propose to that is more localized forcasting and warning. But the Feds are closing down local weather service offices and moving more and more to automated servers from regional weather centers. Perhaps that saves money, but it also results in generalized forcasts and warnings that don't serve the local population as well. An often heard complaint from the public is that weather forcasters should have windows. That's because the forcasts they hear on weather radio are so often at variance with what they can see out their windows. They don't realize that the forcast may be originating thousands of miles away in Kansas City. As local broadcasters, we try to give a more local and tailored forcast than that. We sometimes succeed.

Gary

I don't know what to do, or where to post.

There is a major interfearance problem on a business
band here in philadelphia. When Our system is trying to talk
at night, the other people using the band try also to talk.

Without naming either business, is there anywhere someone
can point to so I can do a search for their liscence for their
repeater, (which has gained signal strength majorly in the last month
or so) so I can see what they are liscenced for in terms of power
output and height of repeater?

thanks, and if anyone can do it, it is a college in phil,
on the frequency of 462.000 (rx) 467.000 (tx)

Thanks. All help is appreciated, as we let them talk, but they
don't let us talk.

Thanks.

Wayne Covington (wayne@fc.hp.com) wrote:

: Another interesting case is to start with a conventional elliptic function
: bandpass response, then proceed to the two networks with flat group delay
: and 90 degree phase difference, keeping the nice elliptic magnitude response.
: The finite jw-axis zeros may well wreak havoc -- with the number of poles
: and zeros (for the same overall tolerances on amplitude and phase errors as
: you have above) increasing significantly.

If you look at this a little differently, it's easy to see that the number of poles & zeros shouldn't be significantly affected. Come up with a pair of filters for quadrature phase that you are happy with for amplitude and phase matching. Add the same zeros and/or poles to both. Then the amplitude and phase matching will be unchanged. However, it should be easier to put the frequency shaping outside the quadrature phase network, since it can then be guaranteed to be identical for both channels. Leave the quadrature network all-pass; if you wish, shape its absolute phase to compensate the frequency-shaping filter. At least, that is how I'd approach it if I were constrained to do it analog.

>helpful since more than a few people in my area are interested in doing
>the same sort of thing.

No. You can't transmit this way. At least half the transmitted power
will go directly into the receiver front end of the other radio. This
is very likely to cause damage to the receiver. At best it will block
the other receiver from functioning while the other CB is transmitting.

There are special circuits called *duplexers* that will allow this
type of arrangement. But they have to be tuned to exact frequencies
to work. So if you ever change frequencies on either radio, you'll
have to retune the duplexer. At the very narrow channel spacings of
CB, such a duplexer would be very large and complex in order to work.
In short, it's possible, but not practical to do this.

You could use a splitter and switching arrangement so that the
receiving radio would be out of the circuit when the other is
transmitting. That would require some clever TR switching to make
sure the relays had operated before the transmitter is engaged.
You can do that by routing the PTT line from the microphone to
the relay box so that it switches the relays, then take a feed
off an auxillary pair of contacts on the relay to switch the
transmitter into transmit. Getting it arranged so you can key
either transmitter would be the tricky part. You'd need
to cross couple the wiring from each microphone to the
other radio's isolation relay and take that relay's auxillary
contact for the PTT of the other radio.

319. STS-59 SAREX Flight Information

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-07 18:46:29 UTC
From: ABFHB@STDVAX.GSFC.NASA.GOV
Message-ID: <940407144629.2548ea4d@STDVAX.GSFC.NASA.GOV>
Source record: 268732

SB SAREX @ AMSAT $STS-59.002
STS-59 SAREX Flt Info

Launch of next SAREX mission imminent

The next Shuttle Amateur Radio Experiment (SAREX) mission is ready for launch at the Kennedy Space Center in Florida. This flight, designated STS-59, is scheduled for launch on Friday April 8 at 12:06 UTC. Weather conditions could cause the launch to move forward or back by one hour. STS-59 will carry Jay Apt, N5QWL and Linda Godwin, N5RAX on a nine day mission which will include packet radio and some voice operations. A SAREX fact sheet, courtesy of Jay Apt, the ARRL and AMSAT follows. Note that during this mission, the JSC ARC, W5RRR, expects to retransmit NASA Select audio on AO-13. The planned downlink frequency will be 145.84 MHz. In addition the JSC ARC crew in Houston have set up a dial-in BBS which is now in operation. Orbital elements will be available on this machine throughout the mission. The phone number for the BBS is (713) 244-5625. Please use 9600 baud or less.

SAREX FACT SHEET - STS-59

WHO: Space Shuttle Endeavour crew

WHAT: Talk via Amateur Radio with students and radio amateurs on Earth.

WHERE: Earth Orbit. Altitude 220 kilometers, with radio coverage in latitudes from 70 degrees North to 70 degrees South. This flight is in one of the lowest altitude orbits ever flown by the shuttle, so pass times will be shorter than usual.

OPERATORS: Dr. Jay Apt (N5QWL) and Dr. Linda Godwin N5RAX.

N5QWL is the commander of the Blue Shift aboard Endeavour and will operate the shuttle systems during the "night" shift, while N5RAX is the Payload Commander, responsible for overall operation of three large radars in the shuttle's cargo bay during the "day" shift.

WHEN: April 8, 1994 at 12:06 UTC (9 day mission)

WHY: As part of the Shuttle Amateur Radio EXperiment (SAREX) component of the STS-59 mission.

SPONSORS: The American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and The National Aeronautics and Space Administration (NASA).

SAREX MODES: FM Voice and Packet
VOICE CALL SIGNS: N5QWL and N5RAX
PACKET CALL SIGN: W5RRR-1

SAREX RADIO FREQUENCIES:
Voice Downlink: (Worldwide) 145.55 MHz
Voice Uplink: 144.91, 144.93, 144.95, 144.97, 144.99 MHz
Voice Uplink: (Europe only) 144.70, 144.75, 144.80 MHz
Packet Downlink: 145.55 MHz
Packet Uplink: 144.49 MHz

Successful QSOs on voice will be facilitated by using
standard international phonetics for your call sign.
The crew not answer any stations using non-standard
phonetics. Use your entire call sign -- the crew logs with an
audio tape recorder. Do not use the Shuttle call sign --
passes are very short, and the crew wants to work as many
folks as possible.

If you can, decrease your radio's deviation to 3 KHz (most are
initially set at 5 KHz) and compensate for the Doppler shift. If
you cannot, wait until a minute or 90 seconds after the Shuttle comes over
your horizon to transmit -- that will put you within the SAREX IF. The above
applies to both voice and packet.

INFORMATION: Goddard Amateur Radio Club, Greenbelt, MD, WA3NAN. SAREX
news and NASA Mission audio retransmissions on 3.86, 7.185,
14.295, 21.395, and 28.65 MHz and on VHF at 147.45 MHz.

Johnson Space Center Amateur Radio Club, Houston,TX, W5RRR.
SAREX news bulletins on HF bands at 3.850, 7.227, 14.280,
21.350, and 28.400 MHz and VHF at 146.64 MHz.
Also 145.84 on AO-13 at times

ARRL, Newington, CT, W1AW.
SAREX news bulletins (9:45 PM, 12:45 AM EST) on
HF bands at 3.99, 7.29, 14.29, 18.16, 21.39, 28.59
and VHF at 147.555 MHz.

PARTICIPATING
SCHOOLS: Ealy Elementary School, West Bloomfield, MI
Kanawha Elementary School Davisville, WV
Alcatel Amateur Radio Association and Circle 10 Council-BSA
Richardson, TX
Anthony Elementary, Anthony, KS
St. Bernard High School, Playa Del Rey, CA
Country Club School, San Ramon, CA 94583
Deep Creek Middle School, Baltimore, MD 21221
Paltamo Senior High School, Paltamo Finland
Ogilvie School, Northampton, Western Australia

OPERATIONS NOTES:
If you have a packet QSO number issued to you by the
robot, don't try to get another one! The on-board

program drops the duplicates anyhow, and all you
are doing is making it harder for the other folks.
A QSL card will be issued if you appear in the "heard"
list on the TNC.

N5QWL will be asleep over most USA passes, and N5RAX will
be busy with assigned duties for most daylit US passes, so
if the sun is up, try SAREX on packet. The Shuttle crew
will try to work voice (1) when we are not otherwise engaged,
and (2) at night or when the ground is cloudy (we are
generally busy taking pictures of the Earth during clear
daylight passes).

If Jay Apt can get to it, he will activate the SAREX about
3 hours into the mission.

QSL via: ARRL, ATTN: STS-59 QSLs, 225 Main Street, Newington, CT 06111,
USA. Include a self-addressed stamped envelope (SASE). Non-US
stations include a self addressed envelope with $0.50 of US
postage affixed or appropriate IRCs. Include the Callsign worked,
Date, UTC, Mode, and Frequency. For packet contacts, include the
QSO number issued by the robot. SWL QSL's: Include the Callsign
heard, Date, UTC, Mode, and Frequency.

320. GB2RS News 10th April 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-07 19:28:37 UTC
From: dave@llondel.demon.co.uk
Message-ID: <765772117snx@llondel.demon.co.uk>
Source record: 268733

Good morning. It's Sunday the 10th of April and here is the GB2RS news broadcast, prepared by the Radio Society of Great Britain.

First the headlines:- Look out for Scottish stations next week-end; repeaters set to close down; and attention anyone running a station to celebrate the centenary of Parish Councils.

Next Saturday and Sunday, the 16th and 17th, is Scottish Activity Weekend. This event, run by the Scottish Tourist Board (Radio Amateur) Expedition Group, aims to encourage activity by Scottish radio amateurs and to create a worldwide interest in contacts with Scottish stations. The Scottish Century Award is available and further details can be obtained from Robbie, GM4UQG whose address is correct in the RSGB Call Book. All GM, GS and 2M stations are invited to participate.

Now an urgent message for repeater keepers and users. The Radio-communications Agency has stipulated that each keeper must inform the Amateur Radio Section at RSGB Headquarters in February each year that he wishes his Notice of Variation to remain in force for the year commencing the 1st of April. In Mid-March a letter was sent to keepers who had not responded, and no reply has been received from the keepers of repeaters: GB3AH, GB3LW, GB3NF, GB3OH, GB3PA, GB3TN and GB3WB. If no letter of continuation is received at RSGB Headquarters by next Thursday, the 14th of April, then the repeater will be unlicensed and must be closed down.
It is therefore vital that keepers respond promptly to this request. Repeater users may wish to check that the keeper of their local repeater has responded.

Parish Councils in England and Wales celebrate their Centenary in June. Will those setting up Special Event Stations in connection with these celebrations consider operating over the weekend of Saturday the 25th and Sunday the 26th of June to ensure maximum contact with other parishes. A common date will facilitate the exchange of messages between Council Chairmen and others. For further details contact R A Bastow, G3BAC, by telephone on 0474 812049, or write to his address which is correct in the RSGB Call Book.

We are very sorry to have to report that the RSGB EMC Coordinator for South Wales passed away last week. Any members whose problems were being dealt with by Charles Barry, GW3BUT, should now con-tact another co-ordinator, or telephone the RSGB EMC Committee Chairman on 0277 218531.

RSGB Committees meeting this week include the VHF Contests Committee who meet in London on Wednesday the 13th of April.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.
From Anguilla, KB8WC, N8LXS and KO8O will sign VP2EOH from Monday the 18th until Wednesday the 20th of April inclusive.
From the Dodecanese Islands, F5MKD, F5PWH and F1OET will sign SV5/own call from Rhodes from Saturday the 23rd until Saturday the 29th of April. Operation will be SSB only on 10 - 40 metres, excluding WARC bands.

And from St Christopher/Nevis, KB8WC, N8LXS and KO8O will sign V47WC on SSB and V47XS on CW from Friday the 22nd until Wednesday the 27th of April. Emphasis will be on 40 metres CW.

Rally news now:

Now the Rallies for today Sunday the 10th of April:

The Leiston Amateur Radio Club Car Boot Sale is being held at the Solar Car Park, off Sizewell Road, Leiston, Suffolk. Doors open at 10am. This event is a radio-oriented car boot sale.

The Lough Erne Amateur Radio Club Mobile Rally is being held at the Killyhelvin Hotel, Enniskillen, Co Fermanagh. Doors open at 12 noon. The event features trade stands and a bring and buy stall. Talk-in will be on channel S22 by GI0LEC.

The Swansea Amateur Radio Society Rally is being held at the Swansea Leisure Centre, situated on the Swansea/Mumbles coast road, the A4067. Doors open at 10.30am. The event features trade stands, repeater group stands, operational HF and VHF stations and a bring and buy stall. Refreshments will be available and talk-in by GB2SWR on channel S22.

Now the Rallies for next weekend.

On Saturday the 16th the Spring All Micro Show, Radio Rally and Electronics Fair is to be held at the Bingly Hall, Staffordshire Showground, Weston Road, Stafford. Located off the A518 Stafford/Uttoxeter Road, it is signposted from junction 14 on the M6 motorway. Doors open at 10am. This event features many stands covering computers, software, books, components hardware, as well as radio and satellite stands and a bring and buy stall. Refreshments will be available. Further details can be obtained by telephoning 0473 272002.

And now the events for Sunday the 17th of April:

The Bury Radio Society Radio Rally is to be held at the Castle Centre, Bolton Street, Bury, Lancs. Doors open at 11am, or 10.30 for disabled visitors. The event features trade stands and a bring and buy stall. Talk-in will be on two metres, channel S22. Further details from G4KLT, Tel: 061 762 9308.

The second event on the 17th is the Cambridge Repeater Group Amateur Radio Rally which is to be held at the Philips Telecom Catering Centre, St Andrews Road, Chesterton, Cambridge. Doors open at 10.30am. The event features trade stands, a bring and buy stall and the usual Auction. Refreshments will be available. For further details contact Darren Salter on 0223 358985 extension 3265 during working hours.

The third and final event on the 17th is the Marske-by-the Sea Radio Rally which is to be held at the Marske Leisure Centre, High Street, Marske-by-the-Sea, near Saltburn, Cleveland. Doors open at 11am. The event features the usual traders and a bring and buy stall. Refreshments will be available. For further details contact Alister, G4OLK on 0642 475671.

HF contest news now:

The RSGB RoPoCo-1 Contest take place today, Sunday the 10th of April, from 0700 to 0900 UTC between 3.520 - 3.570MHz, CW only. The contest is rather complex so participants are advised to consult the rules which can be found in the March edition of Radio Communication.

The second in this year's series of RSGB QRS (Slow Morse) Cumulative Contests will take place next Wednesday the 13th of April from 1900 to 2030 UTC between 3.540 - 3.580MHz. See April RadCom page 8, for further details and January's RadCom, page 83 for the rules.

Clubs wishing to enter the RSGB HF National Field Day should note that the deadline for registration is Saturday the 23rd of April. Further information can be found on page 82 of the February edition of RadCom.

The RSGB Low Power Contest will take place next Sunday the 17th of April from 0700 to 1100 UTC between 3.510 - 3.560MHz and 7.010 - 7.040MHz on CW. See February RadCom, for the rules and further details.

Next some VHF contest news:

The first of a series of RSGB 24GHz Summer Cumulative Contests takes place today from 0900 -2100 UTC. The rules can be found on page 82 of April's RadCom.

The RSGB 1.3 and 2.3GHz Fixed Station and Listeners Contest takes place today Sunday the 10th from 1700 to 2100 UTC. Rules are in February's RadCom.

The 70 Centimetre Trophy Contest is scheduled to take place on Saturday the 7th of May from 1400 to 2200 UTC. Starting at the same time is the 432MHz to 24GHz Contest which is a 24-hour event. See February RadCom, page 83 for further details of both events.

Some Special event stations active this month, include:

GB4CRO, Cave Rescue Organisation, will be aired by the Central Lancs Amateur Radio Club from Friday the 29th of April until Monday the 2nd of May. For some of the time, operation will be from the White Scar Cave, using external aerials on 20, 40 and 80 metres. For further details contact Jack, G0FQN, on 0772 423741.

GB0XXV, will be used from April until the end of September to celebrate the 25th Anniversary of the Thornton Cleveleys Amateur Radio Society. The station will operational on HF, VHF and UHF, with G4ATH on 160 metres and G6GMW on VHF and UHF. For further details contact G8RDP, whose address is correct in the RSGB Call Book.

And now the solar factual data for the period the 28th March to the 3rd of April:

Due to the holiday we are a bit short of some data. Solar activity has been very quiet, with spot counts dropping to zero on the 2nd and 3rd of April. No flares have been reported but the expected magnetic storms due to coronal holes duly arrived.

The sunspot indices meaned about the 30s, though the 2nd and 3rd were down to zero. The last time zeros were recorded was September 1993. Solar flux levels are continuing to decline from 88 units on the 28th down to 77 units by the 3rd of April. The average for the period was 83 units. The 90 day flux mean on the 2nd of April was 100 units.

The geomagnetic levels were quiet up to the 1st of April when, due to an eruptive prominence and the passage of coronal holes, a major magnetic storm developed raising the Ap index to 76 units by the 3rd. The period averaged an Ap index figure of 21 units. The state has been 'Strat warm' over polar regions, 'declining' towards the 2nd, then 'major mag storm in progress'. The daily averages of the aa indices for the 22nd to the 28th of March were 27.2 nanoTeslas, about K3. The 26th and 27th were quiet days with periods down to 5 and 8 nanoTeslas. The X-Ray flux has continued to decline with the period averaging only A5.5 units. The 3rd of April was down to only A2.4 units, the lowest level since September 1993.

I'll repeat the figures. Spots - 30; Flux - 83; Ap index - 21; X-ray flux - A5.5.

Now the ionospheric data for Central France:
Due to the holiday we have only data for the 28th to the 30th. For that period the F2 daytime critical frequencies at Poitiers, as reported by Meudon, averaged 7.3MHz and the darkness hour lows 3.7MHz. The highs are now anywhere between 11.00 and 17.00 hours, but the darkness hour lows are centred on 05.00 hours.

I'll repeat the figures. Highs - 7.3MHz; lows - 3.7MHz.

Now the ionospheric data for the north:
The F2 daytime critical frequencies at Ekaterinberg
averaged 6.5MHz and the darkness hour lows 3.4MHz.

I'll repeat the figures: Highs - 6.5MHz; lows - 3.4MHz.

And the solar forecast:

This week the quiet side of the sun will be looking our
way, and the magnetic storms should have died down by now. Solar
flux levels are expected to be about the 90s. Geomagnetic levels
are expected do be just unsettled with Ap indices in the 20s.
Ionospheric MUFs in the south during daylight are expected to be
about 24MHz and the darkness hours 7.0MHz. North/south paths will
be predominant. The seasonal changes are now affecting east/west
paths, which will be well down on these levels. For northern
stations daytime MUFs could be about 21MHz and darkness hours
about 7.0MHz.

We have been asked what the lowest solar flux levels are likely
to be at solar minimum. The lowest monthly average during the
past four cycles was 67 units in July 1964, the other cycles have
only varied from this by very small amounts. The lowest X-Ray
flux levels expected are not known, as this data has only been
available in recent years.

And that's the end of this week's solar information.

Finally in the main news, SSL has informed the Society that as of
last Wednesday morning, the latest callsigns issued were in the
G0 Uniform Romeo and G7 Sierra Golf series, and Novice calls in
the 2 0 Alpha Hotel and 2 1 Charlie Uniform series.

And that's the end of this week's GB2RS news broadcast, which was
prepared by the Radio Society of Great Britain.

Probably because so many of us have moaned, cussed, etc. to install/
repair $400 M/C CB radios that wouldn't get out over 1/2 mile and then
figured out that 2m and 70cm was a heck of a lot easier to work with!

Either that, or the mentality of those that ride motorcycles is compatible
with those who climb 50+ foot towers and build 3000V power supplies for
fun!

>If you have a modem dial up the ARRL BBS at 203-666-0578 (300-14400, N81), and
>download SM410.ZIP or FTP from oak.oakland.edu.
^^^
>

The key to getting SM to operate under windows is to get the latest version.
I downloaded it around January from wuarchive.wustl.edu, and recently got
the Chestnut Ham Radio CD-Rom. In both cases, the version was 3.16.
I downloaded 4.1, and it worked fine. After playing with it for a few
minutes, I found that the latest release appears much improved in the user
interface.

Thanks all,

Frank Robey

Yesterday a I received a packet from the ARRL telling me that
my license was scheduled to expire of a certain date. They explained
the FCC rules for renewal and gave a typical renewal time. Included
were the FCC 610 form and an envelope pre-addressed to the FCC! Way to
go, ARRL! Very nice, thoughtful, helpful, and much better than the
"scare tactic, send us $5" of the W5YI group.

Keep up the good work!

>me from ever crossing the news boundaries ... ;-/
>
Not quite that simple with the internet access via Demon (as any of the others reading this will agree) and with the sofware in use (a derivative of KA9Q) because the feed site is supplying news to several thousand dial-up sites and it would be impractical (or expensive to the users!) for them to maintain news lists for all of us.

Anyway, back to a more relevant subject: my vote would be for the full list to be sent out every few months with additions/deletions every month which include a pointer to the full list.

Dave

Don't do it unless you you install an antenna switch. Of course this
limits you to listening on one radio at a time.

George

328. how's FM broadcast for freq. standard?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-07 21:07:32 UTC
From: randolph@est.enet.dec.com
Message-ID: <Cnwor0.6L5@ryn.mro.dec.com>
Source record: 268742

I just acquired one of the Optoelectronics 1200 MHz handheld freq counters. In looking for a simple, cheap way to calibrate it, I note that it picks up the nearby FM broadcast station as 107.2999 MHz when I connect a rubber duck... how close can I assume those guys are? The way the counter is set up, the higher the standard freq, the better your calibration. Zero-beating WWV won't get me as close as something less definitive at 100 MHz or higher.
-Tom R. N1OOQ randolph@est.enet.dec.com

Isn't this only true (mathematically perfect carrier suppression) if you
happen to use perfect "brick wall" filters after the two Weaver mixers?
Practically speaking, very good Hilbert transformers for the phasing method
can be implemented with DSP's nowadays. My question is, which of the two
methods uses the least amount of DSP power for the same level of performance?

330. IPS Daily Report - 07 April 94

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-07 23:08:58 UTC

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 7/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 7 APRIL AND FORECAST UP TO 10 APRIL

IPS Warning 10 was issued on 31 March and is current
for interval April 3 - 14 (coronal hole).

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 073/009

1B. SOLAR FORECAST
08 April 09 April 10 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 6 April
Learmonth 25 3354 4443
Fredericksburg 33 31
Planetary 38 43

Observed Kp for 6 April: 5566 5544

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
08 Apr 35 Active to minor storm.
09 Apr 35 Active to minor storm.
10 Apr 35 Active to minor storm.

2C. MAGNETIC COMMENT
Coronal hole sourced disturbance in progress.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
07 Apr normal fair-normal poor-fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
08 Apr fair poor poor
09 Apr fair poor poor
10 Apr fair poor poor
3C. GLOBAL HF PROPAGATION COMMENT
Fair-Poor HF comms quality expected at times over next three days.
Conditions at high lats are expected to remain degraded
until April 14.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were 10 to 15% below predicted monthly values

Observed T index for 07 April: 27

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
08 Apr 35 10 to 15% below predicted monthly values.
09 Apr 35 10 to 15% below predicted monthly values.
10 Apr 35 10 to 15% below predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Fair-Poor HF comms conditions expected until April 13, especially
during local night. Poor conditions have been observed at Hobart,
with depressions of 20-30% at times.

331. Mid-Atlantic Hamfest Listing 7 April 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-08 00:19:52 UTC
From: cps@access.digex.net
Message-ID: <2o27v9$t01@access3.digex.net>
Source record: 268748
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.swap

MID-ATLANTIC HAMFEST LISTING April 7, 1994

The following is a listing of known hamfests in the Mid-Atlantic area.
I will update this list as necessary. Please send any additions or
corrections to me at cps@access.digex.net so that others may benefit.

If you know of any hamfests not in this list, please let me know about
them so that they may be included in the next edition.

Thanks,

Chris Smolinski, N3JLY

I think the key phrase is "shape its absolute phase to compensate the
frequency-shaping filter." I didn't explain the situation I had in mind
very well. Let me try again.

Suppose the system has been realized with a conventional all-pole bandpass
filter such as Chebychev or Butterworth for the amplitude shaping, followed
by all-pass networks to flatten the system's group delay and get the
90-degree phase difference. The 90-degree phase difference and flatness of
group delay are just within certain tolerances.

Now you decide to improve the amplitude response (better shape factor) by
changing the bandpass filter to the elliptic version, with the same number
of poles but additional jw-axis zeros. You try to readjust the all-pass
networks to restore the flat group delay and the 90-degree phase difference
to within the original tolerances.

My conjecture is that this cannot be done without adding more all-pass
pole-zero pairs. If the group delay is within tolerance, the 90-degree
phase difference isn't, or vice-versa.

Wayne

335. Linked Repeater Help

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-08 02:23:43 UTC
From: hopken@interaccess.com
Message-ID: <2o2f7g$9lm@mailhost.interaccess.com>
Source record: 268752

Hi. I need to talk with someone who is knowledgeable in the techniques used to link 2 or more repeaters together. Something like the "Mighty 5.25" system in Indianapolis. If you have some knowledge of this sort of thing, please leave me a message (email) and I'll be a little more specific about our needs. This is for a Red Cross communications project.
Tnx for your help...

The posting for World should no longer exist, and the recent repost was
the fault of another network. It is being fixed (I think).

The archives have moved from World over to oak.oakland.edu

The directory structure is still /pub/hamradio

I am sorry for any confusion this may have caused.

Scott

Regarding 'another DC source', how about a regulated 12v power supply at
home?

This is my other DC source, as I do not yet have a car (can't afford one :(

It is how I power my 530 at home, and also how I power my other HTs,
which consist of a Yaesu FT411E 2m, and an ICOM IC-2AT, both with their
respective DC adapters.

Hope this helps.

The 3-Hr Ap Indices for 06 APR 94 are: 41 42 70 70 37 36 25 31
Greater than 2 MeV Electron Fluence for 07 APR is: 2.1E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been unsettled to minor storm.
High latitude stations saw periods of major to severe storm.
Activity is most likely due to a well positioned coronal hole.
Energetic electron fluxes (> 2 MeV) ranged from normal to very
high for the period.

Geophysical activity forecast: the geomagnetic field is
expected to be at unsettled to minor storm levels for the next
48 hours, then unsettled to active for the remainder of the
period.

Event probabilities 08 apr-10 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 08 apr-10 apr

A. Middle Latitudes
Active 20/30/30
Minor Storm 40/35/30
Major-Severe Storm 25/15/15

B. High Latitudes
Active 15/30/30
Minor Storm 35/30/30
Major-Severe Storm 35/20/20

HF propagation conditions were below normal over all
regions. No significant changes have been observed over the
last 24 hours. High and polar latitudes continue to experience
very poor to occasionally near-useless propagation,
particularly on night-crossing circuits. Middle latitudes have
observed fair to occassionally very poor propagation and low
latitudes have seen generally fair propagation. Similar
conditions are expected through 10 April. No significant
improvements are expected until about 11 April when middle and
low latitudes should begin to see some recovery. Higher
latitudes should also begin improving, but at a slower rate.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep

Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

345. Re: solar charge controller

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-08 05:29:02 UTC
From: bote@access.digex.net
Message-ID: <bote.765782416@access3>
Source record: 268688

ralph.ward@pubcon.com (Ralph Ward) writes:
>anybosy have plans or ideas for a really cheap, simple charge controller
>for solar panels...(charging 12v lead acid cells).

I would think that the diurnal solar cycle would be
a pretty good start. +/- 12 hours of charge and +/- 12 hours
of no charge. This works OK on a very remote receiver
we have powered by two car batteries and a solar array.

>also looking for a good source for amorphous photovolataic panels.....
>thanks

I got a card from a guy at the Timonium, MD hamfest
last week...which I seem to have as quickly misplaced.
Search results negative.

The guy's last name was Howell and he seemed to
know what he was talking about. If someone knows
who this is, please tell Ralph unless I find it
first. Does that make sense?

346. SB320 Direction Finding in RACES

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-08 05:30:31 UTC
From: enge@enge.almaden.ibm.com
Message-ID: <2o2q5n$ijs@juniper.almaden.ibm.com>
Source record: 268762

A gentle reminder to those who feel outraged about the RACES bulletins :-)

A few years ago, I volunteered to feed the RACES Bulletins into the Internet system. That's the extent of my involvement. I don't write them. The opinions expressed are those of the author and I am just the messenger.

The bulletins originate at the California State RACES Office. You can contact them via amateur packet at the following address:

W6WWW@WA6NWE.#NOCAL.CA.USA.NOAM

If you would like their mail address or telephone number, drop me a line and I will see if I can dig it up.

Roy Engehausen, AA4RE

ANARTS NEWS BULLETIN 803 03/04/94

SUNDAY TRANSMISSION FREQUENCIES.
3.545 MHz 0930 UTC VK2BQS (Jim)
This broadcast will recommence
April 10th.
7.045 MHz -3 0030 UTC VK2CTD (Col)
14.070 MHz (amtor/fec) 0030 UTC VK2DPM (Alan)
14.091 MHz 0030 UTC VK2BQS (JIM)
146.675 MHz 0030/0930 UTC VK2JPA (PAT)
144.850 MHz (ax25 bbs) VK2JPA AT VK2RWI
146.675 MHz (rtty mmbbs/repeater) VK2RTY

Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

Happy Easter to all!

ARRL proposes 219 - 220 MHz band plan

An ad hoc committee created by the Executive Committee of the
ARRL Board has released a draft of their report. The proposed
plan would use the band on a secondary, non-interference basis
specifically for coordinated, high speed digital point-to-
point communication.

The proposal requires that no Amateur station shall cause
interference to maritime mobile, fixed stations or other
mobile licenses operating in the band. All classes of licenses
may use the band. The Amateur operation must cease if harmful
operation is not corrected otherwise.

The maximum symbol rate of 56 KBaud for codes specified in
part 97.309(a) and a maximum of 100 KHz bandwidth for codes
not specified in 97.309(a). The proposal suggests 10 100 KHz
channels starting at Channel A centered on 219.050 MHz up to
Channel J centered on 219.950 MHz.

The stated objective of the band would be for a creation of a
nationwide high speed Amateur radio data link.

reprinted from the RTTY Digital Journal March 1994

Could be something for our amateurs to keep an eye on, not necessarily on the same frequency.

SARTG WW AMTOR contest (cont.)

QSO-points : QSO with own country five (5) points, QSO with other stations in own continent ten (10) points, QSO with other continents fifteen (15) points. In Australia, Canada, Japan and USA each call district will be considered as a separate country.

Multipliers : Each country per the DXCC list will count as one (1) multiplier on each band, including the first contact with Australia, Canada, Japan and the USA. Each call district in Australia, Canada, Japan and USA will count as one (1) additional multiplier on each band.

Scoring : Sum of QSO points x sum of multipliers equals total score.

SWL : Use the same rules for scoring, but based on stations and messages copied.

Awards : To the top station in each class, country and district ment above, if the number of QSOs is reasonable.

Logs : Logs must be received by June 10th 1994 in order to qualify. All logs must contain : Band, date/time UTC, message sent and received, points and multipliers. Use a separate sheet for each band and enclose a summary sheet showing the scoring, class, YOUR CALL, NAME, ADDRESS and a signed declaration that all contest rulwes and regulations for your own license have been observed. In case of multi-operator stations, the calls or names of all operators involved.

Mail logs to :

SARTG Contest Manager
Bo Ohlsson, SM4CMG
Skulsta 1258
S-710 41 Fellingsbro
Sweden

ANARTS April meeting

Please note that, because of Easter, the meeting will be put back a week until Friday 8th April. This is normal practice when the meeting clashes with a public holiday, and the 1st April is Good Friday.

Hope to see some of you there. Time is 7.30 pm and takes place at the QTH of Keith VK2ZZO. For further information contact Col VK2CTD, Jim VK2BQS, or Pat VK2JPA (work 230 3722). Supper supplied.

IPS weekly report
---

24 MARCH - 30 MARCH 1994

Issue No 13
Date of issue: 31 March, 1994

INDICES:
Date 24 25 26 27 28 29 30
10cm 093 091 089 088 088 086 086
A 18 12 09 09 09 06 (10 estimated)
T 60 44 61 64 63 61 54

I.P.S. SUMMARY OF ACTIVITY

Solar activity was very low 24th-29th March and low on 30th.

The geomagnetic field at Learmonth (WA) mostly quiet to unsettled, except for active levels from 0900-1800 UT on 24th, and a period of minor storm levels 1500-1800 UT on 25th.

Ionospheric F2 critical frequencies at Sydney ranged from near predicted levels to 30 per cent enhanced during the period 24th-29th March. Equipment failure prevented observation on 30th. Severe Spread F prevented foF2 determination at times on 26th, and Spread F was also observed on 28th-29th March.

FORECAST FOR THE NEXT WEEK (31 MARCH - 7 APRIL)

SOLAR: Very low to low.

GEOMAGNETIC: Quiet to unsettled then coronal hole-induced active to minor storm levels are expected to start 3 April.

IONOSPHERIC enhanced 10 - 15 per cent then depressions up to 20 per cent from predicted monthly values are expected after 3 April.

Paper for Teleprinters

Please, PLEASE, does anyone want some teleprinter paper, I
have boxes of it. It is triplex paper (three sheets of paper,
two sheets of carbon paper), you can have it for the cost of
freight (you pay the freight). This paper will work in any
pressure machine, or even typewriters, no good for tractor
machines. When you unroll it you finish up with three rolls of
paper and two rolls of carbon paper. The paper you can use,
the carbon -- well you can give it to the children to mess up
the house. Don't worry about the amount you want, I have
enough.

Contact Syd VK2SG, phone 02-631 2576 or ok in the call book.

The Society may be contacted at : PO Box 860, Crows Nest 2065
Australia, for such matters as membership and general
enquiries. Enquiries can also be made by packet to the
President (Col) VK2CTD, or the Secretary (Pat) VK2JPA @ VK2RWI

News items may be sent to Broadcast Officer PO Box 60
Blacktown 2148 Australia, or by packet to VK2JPA @ VK2RWI

Email address for the Broadcast Officer is :

patl@conmusic.pitt.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast footprint area. We know we reach ZL and many South Pacific islands. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

FOOTNOTE: VK2BQS uses VK2DAA as home BBS during the continued absence of VK2RWI. Messages routed via DAA c/o VK2BQS will eventually reach other members of ANARTS.

That concludes ANARTS NEWS803 03/04/94.

INSERTED BY VK2BQS (Jim) Vice-President A.N.A.R.T.S.

John Russell Woodman (jrw@cyberspace.com) wrote:
: I have a situation where I have three CB radios, only two of which I use
: with any regularity, that I would like to connect to the same antenna. I
: know that this will not affect receive capabilities except in the case of
: some nominal line loss, but is it acceptable to keep the radios hooked in
: tandem like this for transmitting? Are there antenna switchers that can
: handle this sort of arrangement if keeping both radios online at the same
: time will cause problems? Any information I can get on this would be
: helpful since more than a few people in my area are interested in doing
: the same sort of thing.

If the channels in your radio are fixed you can use a duplexer to
connect your radios together. However the channels are closed together,you
should use big cavity filter.

> something. Code wars. Anything.

Can anyone tell me when GHz changed pronunciation from "jiga-" to "giga-". The oldest non-techincal publication I can find that gives the "new" pronunciation is a late-sixtes World Book dictionary. The only technical publications I can find that include a pronunciation are published by Howard Sams. None of the Howard Sams pubs have "giga-" as an alternate. Since I don't use gig as an abbreviation for GHz, does this mean I'm too old fashioned or stubborn? I have broken down and used meg for MHz and Mohm. Maybe I'm a hypocrite?:(

I did not know that. Why are they verbotten? Is it because they could span several cells and thereby avoid toll charges, or is there a problem caused by their operation?

FH/DJ2BW to home call. 9K2USA via K8EFS. OD5SK via KB5RA.

Contests.
The Alessandro Volta RTTY DX contest starts 1200 Saturday May 14th until 1200 Sunday may 15 (always the second full week-end in May). All 5 HF bands from 80 through 10 metres.

Classes:
A1 - Simgle operator all bands.
A2/XX - Single operator single band (XX= 10, 15, 20, 40, 80)
B - Multi-operator, single transmitter (list names and
callsigns of all operators).
C - S.W.L.

Exchange message:
To consist of - RST - QSO serial number - your CQ Zone number.

Contacts:
Stations can be worked only once for each band. Additional contacts may be made with the same station if a different band is used.

Scoring:
All two way RTTY contacts will score in accordance with the exchange points table. Contacts between stations within the same country will not be valid. e.g.: A W2 station can work a W1, W3, W4 etc., but not W2. Contacts made outside one's own continent on 3.5 or 28 MHz are worth double points.

Multipliers:
A multiplier of 1 is given for each country contacted. The same country may be claimed again if a different band is used. An additional multiplier is given for each intercontinental country worked on at least 4 bands. A contact with a station which would count as a multiplier will only be valid if the station appears in at least 4 other logs, or a contest log is received from that station.

Countries:
ARRL country list plus each call area in Australia, Canada and the U.S.A. will be counted as a separate country.
Do not count the general country multiplier (VE-VK-W); count each call-area (VE1..0, VK1..0, W1..0).

Scoring:
Total exchange points multiplied by the total number of multipliers multiplied by the total number of QSO's.
(Points X Multipliers X QSO's = final score).

SWL:
The same scoring rules will apply but be based on stations and messages copied.

Awards:
A special trophy will be awarded to the top stations in each class.
In addition a certificate with a special sticker to all entrants.

Log and Scoring sheets:
Use one log per band. Logs must contain: Band, Date, Time GMT, Callsign of station worked, Message sent, Message received, Points and multipliers. A summary score sheet is required with a list of multipliers worked in each band. Comments will also be very much appreciated.
Logs must be received by 31st July 1994 to qualify. Send logs to:
I2DMI - Francesco di Michele - P.O. Box 55 - 22063 Cantu, Italy.
Copies of the rules and scoring table are available from the editor.
Please enclose a SASE.

Notes of interest.
HK0DPA is Hector on San Andres Isl.
Minoru JA3MNP is expected to return to Mount Athos in April and return the RTTY equipment following repairs in Japan. We should then see SV2ASP/A or a similar call return to the HF screen. An earlier report suggested Doc JA3PFZ had been invited to visit Mount Athos as a guest operator with the intention of working Europe on RTTY. KYFC.

BARTG caters for all DATA interests with information-components-kits -ready built units and software from experts. Members receive a 120 page quarterly journal devoted to data modes. Beginners guides for most data modes are available. The group sponsors HF and VHF RTTY contests, administers its own DX and members award scheme and runs an annual rally.

This copy of BARTG News is posted by Iain Kendall (G6ARO) who can be contacted via Internet e-mail at.. iain@humber.ac.uk Items for inclusion in the broadcast may also be mailed to this address, as well as any queries regarding membership or services offered by BARTG.

GB2ATG editor (for Alessandro Volta RTTY DX contest rules and scoring table)
Bob Canning (G0ARF) QTHR. Telephone - 0544 388350.
Amtor/Pactor mail at GB7SCA. Amtor mail at GB7SIG.

I'd like to know whether the CEPT Recommendation
T/R 61-01 is also applied in Andorra and San Marino,
i.e. am I with a German license allowed to operate
a ham radio transceiver from one of these two countries
without other formalities as it is the case e.g. in
France or Italy?

>I'm interested in trying out 6 meters but have a limited budget. Does anyone
>know of a way to easily use an IC-725 or IC-W2A to try the band out?
>Preferrably with low risk of ruining the radio.

You could build a high level transverter using *tubes*. There are
designs in old Handbooks. Otherwise you're going to have to build
a power attenuator to get the 725 output down to a level where it
can drive available solid state transverters. (The 735 has transverter
jacks, one of the reasons I chose it.)

I've seen downconverting designs for 6 meters that used a 2 meter
multimode rig as the driver in some of the European manuals. That's
a viable approach for *FM* with your W2A. But you probably really
want SSB capability on 6.

Let me suggest that you start small. Build a receiving converter
for 6 meters and listen for a while. If you like what you hear,
then build a transmitting converter too.

Gary

362. WWV/H's Antennas

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-08 15:32:22 UTC
From: jherman@uhunix3.uhcc.Hawaii.Edu
Message-ID: <Cny5tz.4A3@news.Hawaii.Edu>
Source record: 268678

Someone was kind enought to provide a copy of the (old) NBS information pamphlet. It was very interesting, but I found the following a bit suprising:

> 1b. Antennas and Modulation
> The broadcasts on 5, 10, and 15 MHz from WWVH are from phased
>vertical half-wave dipole arrays. They are designed and oriented
>to radiate a cardioid pattern directing maximum gain in a westerly
>direction. The 2.5 MHz antenna at WWVH and all antennas at WWV are
>half-wave dipoles that radiate omnidirectional patterns.

For such an an elaborate installation and because of the vital service they provide I would have expected NBS to use antennas more sophisticated than dipoles; there certainly are antennas with more gain which would give the same radiation patterns.

ZCZC AE17
QST de W1AW
DX Bulletin 19 ARLD019
From ARRL Headquarters
Newington CT April 7, 1994
To all radio amateurs

SB DX ARL ARLD019
ARLD019 DX news

The items in this week's bulletin are courtesy of Patrick, F6BLQ/TU5DX, Emir, 9A2NR, Bob, N4CD, Chod, VP2ML, the DX Bulletin, the Ohio/Penn DX Bulletin, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from the pages of QST. Thanks.

RWANDA. Paul, F6EXV, plans to continue on as 9X5DX until the end of May. Check 18140 kHz between 1630 and 1700z. He requests all to please avoid making duplicate QSOs. QSL via F2VX.

IRAQ. YI9CW gets on 14006 kHz at 1745z, 18075 kHz between 1400 and 1600z, and 24900 kHz at around 1345z. QSL via SP5AUC.

NIGERIA. Patrick, TU5DX, has left the Ivory Coast and is now in the Lagos area. Here are some recent spots for 5N. Sam, 5N6ZHM, on 14235 kHz at 2239z. QSL via WA5TUD. 5N1MRE on 14207 kHz at 2116z. George, 5N8LRG on 14347 kHz at 2318z. Paolo, 5N8NDP, on 14347 kHz at 2313z. QSL via IK5JAN.

KERGUELEN ISLAND. Pierre, FT5XJ, was heard this past weekend for over an hour on 14288 kHz starting around 0315z. QSL via F5NLL.

ETHIOPIA. Cards for the 9F2CW/A operation of Rudi, DK7PE, from Asmara will be accepted for Ethiopia credit. Although the operation was from the same hotel as the 9ER1TA/TB operation, licensing was from the Transitional Government of Ethiopia. All other operations from Asmara since 1991 have been licensed by the Provisional Government of Eritrea.

MONACO. A two-day, CW only operation by Luc, I1YRL, will start at 1100z April 9. QSL via I1YRL.

ITU HQ GENEVA. Luc gets around. I1YRL will be operating ITU Hq station 4U1ITU during the next few weeks. Prefix hunters note that the call 4U9ITU will be used during April. QSL via I1YRL.

BERMUDA. Fred, K1EFI, will sign /VP9 May 12 through 20, with most efforts concentrated on 80 through 10 meter CW. QSL via K1EFI.

ANGUILLA. Listen for KB8WC, N8LXS and KO8O to sign VP2EOH April 18, 19 and 20. QSL via K8BL.

SAINT KITTS AND NEVIS. The VP2EOH crew will sign V47WC from Nevis on SSB and V47XS on CW April 22 through 27. 40 meter CW will get special attention. QSL V47WC via KB8WC, and V47XS via N8LXS.

TRINIDAD AND TOBAGO. Newly licensed 9Y4TSB has been heard on 21360 kHz between 2000 and 2100z. QSL to Trueman Braithwaite, Bon Accord, Tobago, West Indies.

ON A SOMBER NOTE. Eva, PY2PE, a well known friend of the DX community became a Silent Key on April 1.

QSL NOTES. Emir, 9A2NR, is handling cards for Zaim, T99Z. Cards for VP2E/N4CD and VP2E/N2TPH should go via the the 1992 CBA of N4CD. TU5DX logs for October 1992 to February 1994 are in the hands of QSL Manager F6ELE.

THIS WEEKEND ON THE RADIO. The Japan International DX Contest for CW, sponsored by Five Nine Magazine, is a 24 hour event starting at 2300z April 9 for 20, 15 and 10 meters. Japanese stations will exchange RST and prefecture number, typically 01 through 50. All others exchange RST and CQ zone. For more info check page 127 of January QST.

The MARAC County Hunters SSB Contest, sponsored by the Mobile AR Awards Club, runs from 0000z April 9 to 2400z April 10. Stateside stations exchange signal report, county and state. All others send Province or DXCC country instead of state. Further details appear on page 119 of March QST.

|> And if not, why not?
|>
Maybe I'm not getting the point of this the way you intended, Scott, but why would they? The ARRL is a service organization...perhaps your idea would be best addressed by the numerous printers that do QSL printing. You are aware that check paper is usually a different type/quality. If it is a profitable idea, I'm sure someone will take the lead.

I was in Gainesville last Monday. It is a nice clean college town and a great place to party. The beach is about 1.5 hrs away in St. Augustine. The summer wx in this part of the world is brutal. July and August highs are typically in the mid-90's with humidities to match. Still, there are worse places to spend a summer. Just be prepared for the humidity.

By the way, why would anyone want to spend the summer as a Gator when everyone knows the world revolves around the Seminoles at FSU??

I did not have a 2M rig with me so I can't tell you about activity in Gainesville.

Enjoy the summer and look me up when you come through.

[You should try to remember to trim your lines to 78 or fewer
characters instead of posting the following as a single line:]

Maybe I'm not getting the point of this the way you intended, Scott,
but why would they? The ARRL is a service organization...perhaps your
idea would be best addressed by the numerous printers that do QSL
printing. You are aware that check paper is usually a different
type/quality. If it is a profitable idea, I'm sure someone will take
the lead.

If I get what you're asking, check the catalogs of Current Inc. and
Checks In The Mail, both of whom do mail order check printing. It is
likely that they have at least an ARRL logo or some other ham radio
insignia they can imprint on checks, and they'll both take artwork
from you and do a custom job.

Or did the original poster mean something else?

--- SOLAR TERRESTRIAL FORECAST AND REVIEW ---
April 08 to April 17, 1994

Report Released by Solar Terrestrial Dispatch
P.O. Box 357, Stirling, Alberta, Canada
T0K 2E0
Accessible BBS System: (403) 756-3008

---------

Can your HF propagation software draw globally contoured "weather-type"
maps of maximum usable frequencies, show you the position of the auroral
zones, produce broadcast coverage maps of signal qualities or
multipathing, ray trace signals through the ionosphere, analyze signal
behavior as it passes through regions of sporadic-E, or compute the
signal quality between any two geographical points? SKYCOM will, and
much much more.

For information regarding the powerful new HF propagation software
for PC computers known as SKYCOM, send an e-mail message to:
"COler@Solar.Stanford.Edu", write to us at the above address, or call
the recorded message at: 403-756-2386 (approx. 3-4 minutes).

NOTES:
These VHF DX prediction charts are defined for the 30 MHz to 220 MHz
bands. They are based primarily on phenomena which can affect VHF DX
propagation globally. They should be used only as a guide to potential
DX conditions on VHF bands. Latitudinal boundaries are the same as those for
the HF predictions charts.

QST de W1AW
DX Bulletin 19 ARLD019
>From ARRL Headquarters
Newington CT April 7, 1994
To all radio amateurs

SB DX ARL ARLD019
ARLD019 DX news

The items in this week's bulletin are courtesy of Patrick, F6BLQ/TU5DX, Emir, 9A2NR, Bob, N4CD, Chod, VP2ML, the DX Bulletin, the Ohio/Penn DX Bulletin, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from the pages of QST. Thanks.

RWANDA. Paul, F6EXV, plans to continue on as 9X5DX until the end of May. Check 18140 kHz between 1630 and 1700z. He requests all to please avoid making duplicate QSOs. QSL via F2VX.

IRAQ. YI9CW gets on 14006 kHz at 1745z, 18075 kHz between 1400 and 1600z, and 24900 kHz at around 1345z. QSL via SP5AUC.

NIGERIA. Patrick, TU5DX, has left the Ivory Coast and is now in the Lagos area. Here are some recent spots for 5N. Sam, 5N6ZHM, on 14235 kHz at 2239z. QSL via WA5TUD. 5N1MRE on 14207 kHz at 2116z. George, 5N8LRG on 14347 kHz at 2318z. Paolo, 5N8NDP, on 14347 kHz at 2313z. QSL via IK5JAN.

KERGUELEN ISLAND. Pierre, FT5XJ, was heard this past weekend for over an hour on 14288 kHz starting around 0315z. QSL via F5NLL.

ETHIOPIA. Cards for the 9F2CW/A operation of Rudi, DK7PE, from Asmara will be accepted for Ethiopia credit. Although the operation was from the same hotel as the 9ER1TA/TB operation, licensing was from the Transitional Government of Ethiopia. All other operations from Asmara since 1991 have been licensed by the Provisional Government of Eritrea.

MONACO. A two-day, CW only operation by Luc, I1YRL, will start at 1100z April 9. QSL via I1YRL.

ITU HQ GENEVA. Luc gets around. I1YRL will be operating ITU Hq station 4U1ITU during the next few weeks. Prefix hunters note that the call 4U9ITU will be used during April. QSL via I1YRL.

BERMUDA. Fred, K1EFI, will sign /VP9 May 12 through 20, with most efforts concentrated on 80 through 10 meter CW. QSL via K1EFI.

ANGUILLA. Listen for KB8WC, N8LXS and KO8O to sign VP2EOH April 18, 19 and 20. QSL via K8BL.

SAINT KITTS AND NEVIS. The VP2EOH crew will sign V47WC from Nevis on SSB and V47XS on CW April 22 through 27. 40 meter CW will get special attention. QSL V47WC via KB8WC, and V47XS via N8LXS.

TRINIDAD AND TOBAGO. Newly licensed 9Y4TSB has been heard on 21360 kHz between 2000 and 2100z. QSL to Trueman Braithwaite, Bon Accord, Tobago, West Indies.

ON A SOMBER NOTE. Eva, PY2PE, a well known friend of the DX community became a Silent Key on April 1.

QSL NOTES. Emir, 9A2NR, is handling cards for Zaim, T99Z. Cards for VP2E/N4CD and VP2E/N2TPH should go via the the 1992 CBA of N4CD. TU5DX logs for October 1992 to February 1994 are in the hands of QSL Manager F6ELE.

THIS WEEKEND ON THE RADIO. The Japan International DX Contest for CW, sponsored by Five Nine Magazine, is a 24 hour event starting at 2300z April 9 for 20, 15 and 10 meters. Japanese stations will exchange RST and prefecture number, typically 01 through 50. All others exchange RST and CQ zone. For more info check page 127 of January QST.

The MARAC County Hunters SSB Contest, sponsored by the Mobile AR Awards Club, runs from 0000z April 9 to 2400z April 10. Stateside stations exchange signal report, county and state. All others send Province or DXCC country instead of state. Further details appear on page 119 of March QST.

>with the click of a mouse.

Speaking also as a person who lives in the area affected by the storms a couple of weeks ago, I found this information extremely useful! It was nice to be able to continue watching the program that was on the air at the time, but still be able to get the relevant storm information without having to listen to some air head weather person blathering on trying to sensationalize the storms into being more than they really were. Just present the needed info and then shut up. :)

Our radar is also sent out full time on local
>cable channels so viewers can watch the storm's progress themselves.

Well, at least for the cable system I am on; it might as well not be there any longer. :-(They used to have WXIA's weather radar on a channel 24 hours a day, along with the audio from the local NOAA station. That was great during thunderstorm season! I could get all the info I needed from one channel.

Now, the morons that run this cable system have the weather radar in a box that is about 1/4 the size it used to be; and on a channel that is shared with ordering information for the Pay Per View channels! The radar 'box' is so small that it is almost useless, even on my 24 inch television.

I've very grateful to WXIA for making their weather radar available to the cable systems, and I've told them so a couple of times over the past few years. I just wish the cable system would have left it alone so it would be more useful than it currently is. :-(

>The problem is the "cry wolf" syndrome. There are so many alerts, we

>are too many warnings and too few tornados that strike in a particular
>location. People's immediate concerns are local. When the warnings are
>"cry wolf" for their specific locations too many times, they stop listening.

I agree with Gary here. In the Atlanta area, there are a tremendous number of 'severe weather alerts' issued during the prime spring/summer thunderstorm season. People really do get tired of seeing them and since they are often not affected by these 'warnings', they start to ignore them since they never

seem to be affected by the storms that they are being 'alerted' to in the first place.

>That's because the forcasts they hear on weather radio are so often at
>variance with what they can see out their windows. They don't realize
>that the forcast may be originating thousands of miles away in Kansas
>City. As local broadcasters, we try to give a more local and tailored
>forcast than that. We sometimes succeed.

I quit counting the number of times I look at the "local forcast" on The Weather Channel (tm) and see that it says "partly cloudy", only to turn and look out the window to see it raining so hard that I can't see the street from my living room window. That's not exactly my definition of "partly cloudy" nor do I think it is the NWS's.

I'm not knocking TWC here. I've got a few friends who work there. I'm mearly trying to give supporting examples of not enough >real< *accurate* local weather info... Especially in times of possibly life threatening storms.

377. Modem throughput with Analog Cellular

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-08 18:56:40 UTC
From: kevin jessup <kevin.jessup@mixcom.mixcom.com>
Message-ID: <1994Apr8.185640.3382@mixcom.mixcom.com>
Source record: 268701
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner

A question for anyone running an analog V.32bis modem (14,1400 baud)
into an analog cellular phone.

What is the effective baud rate when all is said and done?
Does your file transfer protocol indicate many errors?

I am considering a PCMCIA 14,400 baud modem for my palmtop
that will then connect to my analog cellular phone. I don't
want to waste money on the high speed modem if effective
throughput is 2400 baud or less. Thanks.

: Suppose the system has been realized with a conventional all-pole bandpass
: filter such as Chebychev or Butterworth for the amplitude shaping, followed
: by all-pass networks to flatten the system's group delay and get the
: 90-degree phase difference. The 90-degree phase difference and flatness of
: group delay are just within certain tolerances.

: Now you decide to improve the amplitude response (better shape factor) by
: changing the bandpass filter to the elliptic version, with the same number
: of poles but additional jw-axis zeros. You try to readjust the all-pass
: networks to restore the flat group delay and the 90-degree phase difference
: to within the original tolerances.

: My conjecture is that this cannot be done without adding more all-pass
: pole-zero pairs. If the group delay is within tolerance, the 90-degree
: phase difference isn't, or vice-versa.

So long as the additional filtering is done to both channels identically,
the phase and amplitude matching between the two channels is not afffected.

: >AL N1AL

: Isn't this only true (mathematically perfect carrier suppression) if you
: happen to use perfect "brick wall" filters after the two Weaver mixers?

No, the carrier suppression is perfect (except for round-off error). The
imperfect filtering would, however, affect the unwanted sideband suppression.

: Practically speaking, very good Hilbert transformers for the phasing method
: can be implemented with DSP's nowadays. My question is, which of the two
: methods uses the least amount of DSP power for the same level of performance?

The Weaver method only requires a couple multiply operations per sample
to generate the audio 90 degree phase shift. I'm not familiar with
Hilbert transform approximation algorithms, but I gotta believe they
are more complicated than that.

If you fit the antenna to the desired coverage, using a vertical
dipole seems like the only viable configuration. They want to put a
strong signal over the entire continent from Ft. Collins (WWV) and
exploit moderate reflection angles from the ionosphere. This totally
rules out anything that has gain in azimuth and forces the elevation
pattern to have a *minimum* beamwidth of approximately 60 degrees.

Unless someone can correct me, I believe FM broadcast is allowed
+/- 2KHz. Same for broadcast TV audio/video. AM broadcasters are
allowed +/- 20Hz. Nowadays with the availability of cheap, accurate
freq. counters I'm sure they're all much closer than this.

An additional note from another Al KA0IES

The standard for FM Broadcast is a fairly wide standard. If you want to use
something for a standard try an AM broadcast station. They are required to be
inside of 20 Hz limits above and below their assigned channel. I believe the
FM stations are allowed several Kilohertz of deviation.

AL KA0IES Hi Al

>

The above is correct, Part 73 requires 2 KHz accuracy. However, one must be careful in using FM broadcast. It is wideband FM, in that Beta (deviation index) can exceed the first zero crossing of the Bessel Function or 2.405. When that happens, the carrier can disappear, and then reappear in inverted phase. I am not sure how your frequency counter will react to this.

Most FM stations use a FLL to keep their transmitters on frequency by dividing their output frequency by some factor and comparing that with a known accurate lower frequency reference. Note that dividing a FM signal also divides the deviation index by the division ratio. Thus, by dividing by 5 or so, the FM signal can be guaranteed not to exceed a deviation of 2.405, and the carrier never disappears and will always be of proper phase, assuming that the signal corresponds to Part 73 standards of deviation, etc. and that "normal" signals are used to modulate the carrier.

Good luck.

Of course, if you have $$ you can buy a HP 5071A enhanced cesium beam standard. Accurate to at least 1 part in 10^13.

Why do you assume that. If I am an infrequent checkin on your
net, and my third listing is for McLean VA, would you know
who I am?

John also wrote:
>I can't imagine listing details of traffic at check-in

Well thank you Bob for sharing the rules. 8-)

All I can say to you gentlemen is that some nets
do run that way. Stations check in, in one continuous
sequence, with their traffic lists.
Net control never has to pick up the microphone,
....until they are all done. Isn't that efficient?

Without the "here is" technique, it would never work.

As I recall, the first net, on which I heard this procedure,
had adopted it because they felt it was *inefficient* to
check in with "K2UL with traffic" and then have net control
later make a second transmission to ask for the traffic,
then have to make a third transmission to list the traffic.

Not saying I like this procedure more or less than any other.
Whatever works for you.

73, Dan

I have been reading up on doppler RDF's. The Amateur Radio Handbook
has an article that says they can only do well to about 5 degrees.
Have you heard of systems or ways to do it that gives better results?

thanks,
phil...

The APRSxxx.exe program by WB4APR has an interface for the Ultimeter II weather station. It will show weather data as well as a lot of other stuff on a scalable map display. It has a GPS/LORAN interface and DF displays. It's available on the ARN BBS at 410 280-2503 and at some of the Ham FTP sites. APRS btw stands for Automatic Position Reporting System. 73

The above is certainly true in the frequency domain, but in the
time domain (where frequency counters like to live) the RF can
have only one voltage value at a given instant and continues to
have zero (or some threshold) crossings, so the counter will still
read it. My guess is that if the modulation is symetrical (except
if it's something like rap music) then the counter should average
out the variations in period over a long sample time.

Interesting devices. Had my hands in an older 5061A once. I recall
NBS used to have several that were averaged together somehow.

^^^^^^^^
> AL N1AL

Umm... true. But the overall group delay is affected. There is an offline discussion going on on this. The essence of it is that the finite zeros out of the passband by themselves don't affect the phase (certainly true) but the somewhat different pole positions have an effect of to-be-determined significance. Stand by.

Somehow, I suspect this was actually 28 GHz. The system was claimed to provide data rates that would have been awfully fast for a narrow slice of HF.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 8/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 8 APRIL AND FORECAST UP TO 11 APRIL

IPS Warning 10 was issued on 31 March and is current
for interval April 3 -14 (coronal hole).

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 073/009

1B. SOLAR FORECAST
09 April 10 April 11 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active

Estimated Indices : A K Observed A Index 7 April
Learmonth 25 3445 4343
Fredericksburg 29 35
Planetary 35 36

Observed Kp for 7 April: 5565 4334

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
09 Apr 35 Active to minor storm.
10 Apr 35 Active to minor storm.
11 Apr 35 Active to minor storm.

2C. MAGNETIC COMMENT
None.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
08 Apr normal fair-normal poor-fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
09 Apr fair poor poor
10 Apr fair poor poor
11 Apr fair poor poor
3C. GLOBAL HF PROPAGATION COMMENT
Fair-Poor HF comms quality expected at times over next three days.
Conditions at high lats are expected to remain degraded
until April 14.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 08 April: 36

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
09 Apr 35 Near predicted monthly values.
10 Apr 35 Near predicted monthly values.
11 Apr 35 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Fair-Poor HF comms conditions expected until April 13, especially
during local night.

The address works fine. The subscription list is maintained manually. When
I'm out of town (as I am right now) these requests can be delayed. I will
catch up on the backlog (currently about 10 requests) when I get back to
work on Monday.

FYI here is a copy of the mailing list FAQ. I expect posting this will
generate a flood of subscription requests which will slow things down
even more :-)

--lyndon

The Internet DX Mailing List
Frequently Asked Questions (FAQ) Sheet

Lyndon Nerenberg VE7TCP/VE6BBM
(Last Changed: 930906)

What is the Internet DX Mailing List?

It is an electronic mailing list dedicated to the dis-
cussion of Amateur Radio DXing. This is the place to
exchange tips and techniques, discuss hardware (rigs,
antennas, DSP add-ons), awards, announce upcoming DXpe-
ditions, etc. Anything and everything pertaining to DX
is fair game, with the following exceptions:

* Don't send requests for QSL info to the list. (If
someone wants to coordinate a list of current QSL
routes and post that on a periodic basis please
get in touch with me.)

* Don't send lists of QSL routes to the list. (See
above.)

* Discussion about contests and contesting should be
kept to a minimum. The CQ-Contest list already
provides an excellent forum for contest related
discussions. (To subscribe to CQ-Contest, send an
e-mail request to cq-contest-request@tgv.com)

How do I join the list?

To subscribe, send an e-mail request to

dx-REQUEST@unbc.edu

asking to be added. If you are not directly connected to the Internet you must provide an address relative to an Internet site. (We are not connected to BITNET or the UUCP network.) If you are not sure if you are an Internet site, ask your local system administrator.

Requests to be dropped from the list, change of address requests, or any other administrative mail should also be sent to the above address. UNDER NO CIRCUMSTANCES should administrative requests be send to the general

-2-

submission address!

Is the mailing list archived?

In a word, no.

How do I send a message to the list?

It's easy! Just send an e-mail message to:

dx@unbc.edu

Your message will be automatically resent to all the mailing list subscribers. Depending on the load on our mail system this could take anywhere from a few minutes to several hours. If you don't see your message within a day or so, send a message to the request address above (NOT the general submission address) and we will look into the problem.

Here are a few things to keep in mind when sending a message to the list. If everyone follows these guidelines it will help the list operate smoothly.

* Make sure your subject line is appropriate. If a conversation wanders off the original topic, change the subject line to reflect the new line of discussion.

* Proofread your message before sending it! Spelling mistakes and poor formatting do nothing to help you get your message across.

* Keep it short! Many subscribers pay for their e-mail access. Don't include 100 lines of the message you're replying to and then add a three line contribution. Only include as much text as is nec-

essary to establish the context for your reply.

* Watch your language! This list is gatewayed onto packet radio. Don't say anything that you wouldn't (or shouldn't) say over the air. Anyone violating this rule will be dropped from the list *immediately*!

* If someone asks a question, send your answer to them directly. The person asking the question should collect the responses, then send a summary to the list. This helps cut down on unnecessary

list traffic.

* Eschew flamage. If someone sends a flame to the list and you can't bite your tongue, send your flaming reply directly back to the flaming individual, not back to the list. No one wants to pay $1.00 to read these messages (the original flame + your reply). Treat flamers the way you would two-meter repeater jammers - ignore them.

* Make sure there is something of value in each message you send to the list.

When I reply to a message using my mailer's REPLY command I never see a copy of the message come back from the list. Why?

There are two possible causes. One is that your mailer sends the reply only to the originator of the message. In this case you will have to manually CC the mailing list. The second possibility is that your mail reader is so ancient and broken that it sends replies to the ``envelope'' from address instead of the From: or Reply-To: header values. If your mailer sends replies to dx-request@unbc.edu you are running broken software. If you are in the att.com or microsoft.com domains you want to double check for this second problem. Note that replies sent to dx-request get filed in the bit bucket.

Where can I obtain back issues of the various DX bulletins?

An incomplete archive of various Amateur Radio related bulletins is available via anonymous FTP from unbc.edu:/ampr/bulletins/. I add back issues as I come across them - feel free to contact me if you can help fill in the holes. Some time this fall I will be setting up a WAIS server that will include all the online bulletin files. WWW and Gopher interfaces to this data

are also in the works.

If you have any suggestions or additions for this document,
please e-mail them to: lyndon@unbc.edu

Notes of Interest.

The only good note for this week is a report from Syd, VK2SG. Syd states that he is improving and seems to be getting better each day. Nice to hear from you Syd and keep up the good health.

The sad note is the DXpedition from Spratly. Propagation was poor, and from what we saw, were calling only on nets and little split operation SSB on 20 meters. No digital, what a pity.

For next week's bulletin, send your Bandpass and Notes of Interest to Jules, W2JGR @ W2TKU.#SRQ.FL.USA.NA

REMEMBER, DX DON'T SLEEP.

SYNOPSIS OF ACTIVITY

Solar activity was very low. There were no events
of note.

Solar activity forecast: solar activity is expected to be
very low. Region 7700 (N08E72) was numbered today.

The geomagnetic field has been at unsettled to major storm levels. High latitude stations experienced severe storming for several hours. This activity is most likely due to a well positioned coronal hole. Energetic electron fluxes (GT 2 MeV) were mostly high to very high for the entire period.

Geophysical activity forecast: the geomagnetic field is expected to be at unsettled to minor storm levels for the next 24 hours then mostly unsettled to active for the remainder of the forecast period. High latitude stations are expected to have periods of minor to major storming for the entire period.

Event probabilities 09 apr-11 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 09 apr-11 apr

A. Middle Latitudes
Active 30/30/30
Minor Storm 35/30/25
Major-Severe Storm 15/15/15

B. High Latitudes
Active 30/30/30
Minor Storm 35/30/30
Major-Severe Storm 25/20/20

HF propagation conditions remain moderately to strongly disturbed over the high and polar latitudes with poor to frequent blackout (useless) conditions. Middle latitudes were below-normal with poor to occassionally very poor propagation. Low latitudes were also below-normal but did not suffer as profoundly as some of the higher latitudes. Conditions are expected to remain well below normal over the next 24 to 48 hours. Minor improvements, first with the low and middle latitudes, are expected on 11 or 12 April. Higher latitudes will require greater time to recover to near-normal values.

402. Low cost Antenna required

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-09 06:54:35 UTC
From: budhia@underdog.ee.wits.ac.za
Message-ID: <budhia.11.2DA6512B@underdog.ee.wits.ac.za>
Source record: 268714

I require some info on designing a low cost antenna to rural communities where signal levels are fairly low. Thus a low cost outdoor antenna is required.

Any help on design procedures or even examples of existing antennas would be appreciated.

Thanks

Harshik <budhia@underdog.ee.wits.ac.za>

>Does this mean you shouldn't use a cell phone from moutain tops? :)

Notwithstanding the tounge-in-cheek smiley...
Depends on where you are. If you're in a rural area, then there's probably a rural cell server that is properly frequency planned so as to pose to problem to anyone. A mountaintop in an urban area would be tough...not only on the system but on YOU! Your poor phone also hears every co-channel co-SAT cell in the valley below and it's doubtful you'd be able to hold a call for very long. Yes it does happen to have mountains in the middle of an urban area--Phoenix AZ!
The real skinny on cell phones on A/C: In order to properly allow their use (from the FAA's standpoint), all the A/C avionics would have to be type-accepted against cellular interference in-flight. Which would cost the airlines BIG $ to perform all the testing on their existing equipment. So they simply prohibit them in the interest of safety--maybe they don't affect your plane's systems, but do you want to risk your life on it? But practically, again, in trying to use a cell phone on a plane, you'd receive so much co-channel crap that it's unlikely you'd hear anything intelligible.

A relatively uneducated observation:
On my analog cellular system, it's pulling teeth just to have the system
recognize a few relatively long (0.1sec) DTMF tones to access my voicemail or
home answering machine! I can't imagine that anyone actually realizes anywhere
near 14.4kbps throughput!

>

You're not saying they use their *modulated* signal as the input to
their frequency comparator, are you? That would cause the carrier to to
re-modulate itself to cancel out it's original modulation as it tried
to stay on center frequency! If you tried to pick out just the
carrier in a divided-by-five signal you'd need a bandwidth of less than
10Hz (at approx. 20MHz), and, dividing or not, you'd end up with a
uselessly small capture range.

>is different from posting many times.

Please explain why crossposting does not use more bandwidth. Inquiring minds would like to know. 10k x 2 lists is 20k of data. How can that not be a waste. It lets more people see it but many people see it more than once and that is an obvious waste of bandwidth. Think about it for a minute.

>The exception is when someone has a feed that gets one of the groups and
>not the other. Then I agree, he might have a valid point if he says
>that it is a waste of bandwidth _on that link_.

Huhhhhhhhhh if it gets only one then you have less data going across. It jsut does not make sense to me.

>From ARRL Headquarters
Newington CT April 5, 1994
To all radio amateurs

SB QST ARL ARLB030
ARLB030 FCC amends packet rule

FCC Amends Rules Concerning Message Forwarding Systems in the
Amateur Service

In an April 4 press release, the FCC announced that it has relaxed
the amateur service rules to enable contemporary message forwarding
systems to operate at hundreds of characters per second while
retaining safeguards to prevent misuse.

A message forwarding system is a group of amateur stations
participating in a voluntary, cooperative, interactive arrangement
where communications from the control operator of an originating
station are transmitted to one or more destination stations via
forwarding stations, which may or may not be automatically
controlled.

Currently, the control operator of each station is held individually
accountable for each message retransmitted, resulting in unnecessary
content review and delays.

The ARRL, in commenting on PR Docket 93-85, stated that the
obligation of the control operator of the first forwarding station
should be the establishment of the identity of the station
originating the message. Only when this is not done should these
control operators be held accountable for improper message content.

Also, there is currently no central supervisory authority in an ad
hoc amateur service digital network, making these unsupervised
systems easy targets for misuse by uncooperative operators and
nonhams.

Moreover, the Commission said that it could be difficult to
establish after the fact that a particular VHF station originated a
fleeting high-speed digital transmission.

For these reasons, the Commission said there must be on-going oversight of the system and the control operators of the first forwarding stations are in the best position to provide such oversight.

Therefore, the Commission will hold accountable only the licensees of the station originating a message and the licensee of the first station forwarding a message in a high-speed message forwarding system.

The licensee of the first forwarding station must either authenticate the identity of the station from which it accepts communications on behalf of the system, or accept accountability for the content of the message.

The Commission also clarified that the station that receives a communication directly from the originating station and introduces it into the message forwarding system is the first forwarding station.

The League and the Colorado Council of Amateur Radio Clubs suggested that the Commission substitute the word ''simultaneously'' for ''instantaneously'' in the redefinition of a repeater. The Commission concurred and adopted this modification.

The Commission believes that these rule changes will enable contemporary high-speed message forwarding systems to operate as their designers intended, while retaining the minimum safeguards necessary to prevent misuse.

The effective date of the rules change has not yet been announced.

SAREX Mission STS-59

The Johnson Space Center Amateur Radio Club will manage a small dial-in telephone BBS during the upcoming SAREX Shuttle mission. The BBS will have the latest Keplerian element sets available during the flight. The number is 713- 244-5625, 9600 baud or less.

Additional Shuttle mission information will be available throughout the flight from the NASA Spacelink computer bulletin board. To reach the bulletin board, dial 205-895-0028, or on internet use the address spacelink.msfc.nasa.gov.

The flight is scheduled to launch at 1206 UTC on Friday, April 8. Amateur Radio licensed crewmembers Jay Apt, N5QWL, and Linda Godwin, N5RAX, will operate the Shuttle Amateur Radio EXperiment. Apt is the commander of the Blue Shift and will operate the shuttle systems during the ''night'' shift, while Godwin is responsible for overall operation of three large radars in the shuttle's cargo bay during the ''day'' shift. They will operate both FM voice and packet during the mission.

Keep posted to W1AW bulletins for additional SAREX information and updated Keplerian element sets throughout the flight.

Thank to Gil Carman, WA5NOM, and the Johnson Space Center Newsroom for the preceding information.

412. SSTV Information (from ARRL)

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-09 14:21:28 UTC
From: marcbg@netcom.com
Message-ID: <$arlz0409.1994@ampr.org>
Source record: 268724
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,sbay.hams

```
SSTV Information
----------------

Slow Scan Television has been around for a few decades but it never
got very much attention. The reason is that commercial equipment was
very expensive and and it was much too complicated for most people to
homebrew. The situation has changed radically in the last couple years.
Rather than using expensive special purpose hardware, most of the newer
systems are using personal computers to do most of the work. There is
now a wide assortment of free software that uses very simple interfaces
and ready-to-use commercial systems at affordable prices. New people are
showing up on SSTV everyday.

Although SSTV activity has exploded during the last couple years, it's
still hard to find much modern information. The most recent SSTV
handbook published in the U.S. (that I know of) is now almost 20 years old.
Technology has changed quite a bit since then.

A very popular introductory book about Ham Radio (no names mentioned
but it's available at Radio Shack) devotes only a few sentences to SSTV
and describes it as 8 second black & white pictures. It's been nearly
all color pictures for many years.

The CQ 1994 Equipment Buyer's Guide lists only two SSTV products and
neither is manufactured anymore.

Here is one of my attempts to help combat this lack of information.
This file contains some background on SSTV, a list of equipment available,
and pointers to other sources of information.

Detailed specifications and prices have been avoided because that could
be considered advertising. This file is being distributed over the
Internet and Ham Radio Packet BBSs where advertising is not appropriate.

Some outdated and just plain wrong information keeps getting passed
back and forth between various lists of SSTV equipment. A couple months
ago I sent letters to 29 different suppliers asking about their SSTV and
related products. Some letters were returned as undeliverable. Most
of those who did not respond have been dropped from the list. A couple
that didn't respond are still listed because the products are believed
to be still available.

As with anything else, there are some good products available and some
real junk being sold with deceptive advertising. Just get on the air
and ask what people are using and how they like it. Caveat emptor!
```

Please send additions and corrections to johnl@world.std.com and I'll
distribute a new version occasionally.

Let me know where you saw this file; I'd be interested in knowing how
far it gets propagated.

Version of January 1994.

Background

There are several different ways to send images over ham radio:

1. RTTY art - Remember when people made pictures from characters?

2. FSTV (Fast Scan TV - Also called ATV) - Similar to broadcast TV.
Full motion, color, sound, etc. Restricted to UHF and up because
a signal requires several MHz of bandwidth.

3. WEFAX (weather facsimile) - Very high resolution gray scale images
sent by audio tones over a period of minutes.

4. SSTV (Slow Scan TV) - Low to medium resolution still images sent
through audio channels over a period of several seconds to a few
minutes. Mostly color these days.

5. Digital SSTV - We have the technology but I haven't seen any proposals
yet.

Transmission Modes

The original 8 second SSTV transmission mode (around 1958) had the following
characteristics:

black = 1500 Hz
white = 2300 Hz
gray levels in between
120 scan lines
15 lines per second
5 mS of 1200 Hz for horizontal sync
30 mS of 1200 Hz for vertical sync

Since that time many more modes have been invented, sometimes to add new
capabilities, sometimes the result of Not Invented Here syndrome.

The major groups are:

Robot - Introduced with the Robot scan converters (California).
Wraase - Introduced with the Wraase scan converters (Germany).
Martin - Developed by Martin Emmerson (England).
First available as replacement PROMs for Robot 1200C.
Scottie - Developed by Eddie Murphy (Scotland).
First available as replacement PROMs for Robot 1200C.
AVT - Developed by Ben Blish/Williams (Montana).

First available in the AVT system.

The Robot, Wraase, Martin, and Scottie modes are all closely related.
They all use the tones above for black, white, and gray levels.
They all have 1200 Hz horizontal sync, although some Martin and Scottie implementations rely on accurate crystal oscillators and ignore the horizontal sync once synchronized. Color is generally transmitted by sending each scan line 3 times, once each for red, green, and blue components.
Robot is different from the rest in that it encodes colors with luminance (Y) and chrominance (R-Y and B-Y) instead of R,G,B.

Each of these modes has a few different speeds, usually providing 120 or 240 scan lines and varying degrees of horizontal resolution. (Actually some send 128 or 256 lines but the top 8 or 16 are always a fixed gray scale, leaving 120 or 240 usable lines.) In general, the trade-off is time vs. image quality: the modes with the best image quality require the most time.

The Robot modes have a much longer vertical sync (called VIS) containing 7 bits of information and a parity bit. This identifies the format of the following image so manual selection is not required on systems that recognize it. Everyone else has adopted the Robot VIS coding and assigned themselves unused codes in the original specification. Unfortunately, Scottie DX and one of the AVT modes use the same VIS code due to a lack of cooperation among developers.

The AVT mode is radically different from the rest. It has no horizontal sync at all; very accurate crystal oscillators are required to prevent slanted pictures. After 3 repetitions of the usual Robot VIS code, it has a digital header with 32 repetitions of the transmission mode, and a sequence number. It is only necessary to receive one of the 32 groups correctly to achieve synchronization. For more details see the AVT article in CQ-TV mentioned in the bibliography.

Frequencies

By convention, SSTV operation is generally found on only a few frequencies.

3.845
3.857
7.171
14.230
14.233
21.340
28.680

Nets

Two different Slow Scan nets meet on Saturdays at 15:00 and 18:00 UTC on 14.230 MHz.

Scan Converters

A scan converter is a device that converts images in one TV standard to another. In this case we interested in converting between SSTV (for transmission with voice radios) and NTSC/PAL so we can use Camcorders, TV monitors, etc. for creation and display of images.

A couple years ago anyone who was serious about SSTV had a Robot 1200C.

It is a complete system dedicated to SSTV. Just connect it to
- Color TV camera (either NTSC or PAL).
- Color TV set or monitor.
- Speaker and Mic connectors of a transceiver.
- Tape recorder for picture storage.

It has 4 black & white modes (one compatible with original 8 second) and 4 color modes with different transmission times and resolutions.

It displays images with 256 x 240 resolution with 18 bits per pixel. That's more than 250,000 colors.

Robot Research
5636 Ruffin Road
San Diego, CA 61927

It also has a parallel port for connection to a home computer. Several different programs for transferring images to/from the 1200C and for performing various other functions are available.

or
Muneki Yamafuzi JF3GOH
2-3-2, Ohyodonaka Kitaku
Osaka 531
Japan

Semi-kits containing 3 PC boards and the hard to find components.

The newest scan converter is the SUPERSCAN 2001. It is similar to the Robot 1200C but a more modern design with several improvements. It can hold four 256 x 240 images with about 250,000 colors. New features include mouse support, titling without a computer, both parallel and

serial interfaces, and a CMOS RAM with battery backup to save parameters.

Now available are:
* Semi-kit with 3 printed circuit boards, an EPROM developed
by Martin Emmerson, and instructions.
* High stability crystal oscillator.
* Interface card for IBM PC.
* Packages of hard-to-find components.

The builder must gather up all the other components which go on the boards.

Digital Signal Processing

Digital Signal Processing (DSP) could be the next major breakthrough in improving SSTV reception while maintaining compatibility with existing equipment. DSP uses an Analog to Digital (A/D) converter to sample the audio signal. After that it's all software.

DSP can simulate analog circuitry or do types of processing not even possible with the analog approach. DSP isn't magic and it doesn't guarantee superior performance. It all depends on the skill of the person writing the DSP software.

Wyman Research, a major manufacturer of FSTV equipment, showed a prototype system at the Dayton '93 SSTV Forum. We are all anxiously awaiting more information on progress.

Home Computers

Now that most home computers have plenty of memory and excellent color graphics, the most cost effective method is to use a computer with a suitable interface and software.

Note that if you want to send a picture of anything real, you will also need a frame grabber which will add a few hundred more $ to the total system cost.

Amiga

The AVT Master system was once very popular during for both SSTV and WEFAX. It is composed of an interface that attaches to the parallel port and software.

It has images with up to 4096 colors, all the popular transmission modes, builtin graphics editor, text generation, image processing techniques to

clean up noisy pictures, and loads of other features.

It was discontinued Fall 1993 when AEA dropped all of its Amateur Television products.

IBM PC

When I first typed up this file, there was only a very crude B&W system available.

The situation has changed dramatically in the last year or two. There are now several PC-based color SSTV systems available.

Pasokon TV
Absolute Value Systems
115 Stedman St. # B

Product review in QST, April 1994.

ViewPort VGA (developed by KA2PYJ)
A & A Engineering
2521 West LaPalma, Unit K
Anaheim, CA 92801

Construction article in 73, August 1992.

All the systems have some kind of hardware interface (modem or just demodulator) and software that runs on the PC. All require a VGA display. But there the similarities end.

Interestingly, much different approaches were taken with the hardware. Pasokon TV uses an interface that fits into an expansion slot inside the computer. ViewPort VGA uses an external interface that connects to the printer port. PC SSTV and SSTV Explorer use small interfaces that plug into a serial port.

Software varies quite a bit in terms of SSTV modes implemented, support for super VGA cards with more than 256 simultaneous colors, ease of use, and

other features.

HiRes 32 is a new version of the popular HiRes program. It is a paint program designed specifically for use with the PC-based SSTV systems. It has fancy text and a wide variety of special effects.

HiRes 32
Tom Jenkins N9AMR
5968 S. Keystone Ave.
Indianapolis, IN 46227
(317) 784 6118

Most of the recent growth of SSTV activity has been from the use of low cost interfaces and software on personal computers rather than expensive dedicated hardware. The next logical step is to use other common hardware which wasn't even intended for to be used for this purpose.

SLOW SCAN TV for the SOUND BLASTER

P.O. Box 5964
Asheville, NC 28813

(704) 274 4646

Mac

Many people have asked many times and there doesn't seem to be
anything available.

Others

There have been SSTV implementations for other machines such as the Radio
Shack COCO and the Atari computers. (See Bibliography, below.) CQ-TV also
mentions SSTV for machines we never heard of in the USA.

Free Software

There are several free SSTV programs available that will receive, and
perhaps transmit, with very simple interfaces. Look around the ARRL BBS
(phone (203) 666 0578 or e-mail to info@arrl.org), Internet archives
(ftp to world.std.com, ftp.cs.buffalo.edu, oak.oakland.edu or other
SimTel mirrors), or the ham radio sections of other on-line services
or BBSs.

Look for file names resembling:
JVFAX??.ZIP
SLOWSCAN.ZIP
SSTVDEM?.ZIP
SSTVFAX2.ZIP
VESTER.ZIP

Naturally, these don't offer all the features of some of the commercial
systems but they are a wonderful way to get a taste of SSTV with little
or no cost.

Publications

Modern information on SSTV is very scarce. The only recent handbook is:

Slow Scan Television Explained
by Mike Wooding G6IQM
(available from BATC)

The only other SSTV handbook, that I know about, was written by Don Miller
W9NTP and Ralph Taggart WB8DQT about 20 years ago.

There is a good SSTV overview in the January 93 issue of QST.

There are a few magazines that specialize in Amateur Television. These are
mostly oriented toward fast scan TV but SSTV and WEFAX are mentioned
occasionally.

Langner, John WB2OSZ, "Slow Scan Television - It isn't expensive anymore", QST, Jan. 93, p. 20.

Montalbano, John KA2PYJ, "The ViewPort VGA Color SSTV System", 73, Aug 92, p. 8.

Pagel, Paul N1FB, "Radioware SSTV Explorer" (product review), QST, Apr 94, p. 80.

Schick, Martin K. KA4IWG, "Color SSTV and the Atari Computer", QST, Aug 85.

Taggart, Dr. Ralph E. WB8DQT, "The Romscanner", QST, Mar. 86, p. 21.

Vester, Ben K3BC, "An Inexpensive SSTV System", QST, Jan. 94, p. 27.

Conclusion

Most hams are scared away from trying SSTV because they still think it HAS TO be expensive. That WAS true but it's not anymore. SSTV activity has exploded in the last year with the introduction of low cost IBM PC-based SSTV systems.

Landline BBS Open to All: 916-262-1657
RACESBUL.321 RELEASE DATE: April 11, 1994

OPS - Training - who makes the decision

The following was from a concerned FCC Amateur licensee:
"Who makes the decision to mobilize? Does RACES wait for a
request from the emergency management agency, or do you or
another RACES officer decide? The reason I ask is that hams tend
(in my opinion) to be arguable and over-react in an
emergency-type situation. Please don't take this personally. You
may be perfectly calm and level-headed, but I have seen all too
many minor incidents escalated to "emergencies" by over-eager
hams on the repeaters. I would insist upon interposing my own
judgment as to the need for my services."

Comments. That observation is accurate as to over-eager
response. It is a fact of life, just as to those who
complain of the "ponderous movement" of government, although that
has its purpose. Non-RACES units have been known to
"self-activate" sometimes with beneficial results, and at other
times with devastating consequences.

As to interposing one's own judgment; that is valid and is
understood by most people. Still, since it is a personal decision
and mind-set, there are those who are prepared to respond when
officially called without regard to personal sacrifice; examples
being Search and Rescue or Drowning Accident Recovery Teams. As
dedicated unpaid professionals they serve when and where needed.
Even so, they do NOT self activate or respond to an "over the
air" request unless assigned and trained as a strike team which
is purposely structured to respond in that manner.

Any government communications reserve, such as an Auxiliary
Communications Service, RACES, or other designation, is activated
by official authority, which can be accomplished in ways so as
not to lose valuable response time. Ideally, it is at least

partially activated whenever the agency prepares for a potential emergency or responds to an ensuing emergency. Whatever that procedure, it must be followed, just as with any other public safety response. In California and other states where a specified government response program exists, self activation can lead to serious consequences, ranging from interference and delay to loss of confidence in the very people that self-responded. Even so, there are those who argue for "self activation"; but in my experience it is usually from their own ego-need basis, not that of the local situation.

Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc,alt.radio.pirate,rec.video.satellite

Ok Gang, here's your chance to be creative. Begining next week my SPECTRUM newscast will turn into a news and COMMENTARY segment. Other than comming up with a name for it ourselves, we've decided to let the public decide the new name. The best we've come up with is "Mini-Crossband" or "Big Steve's Basement", so we know YOU can do better.

This is just for fun and we'll announce the new title of the segment and the name of lucky individual who came up with it on the April 30th program. There are no prizes except having the winner enshrined in the Spectrum hall of fame, and maybe we'll get Dave to part with a Slim Withman record.

E-Mail your suggestions to me, do not send them to Spectrum or post them. Posted replies will be ignored. Keep 'em clean or forever be twitted to the kill-file at all 132 addresses used by Spectrum, the Omega Radio Network and WWCR.

Spectrum is heard Saturday nights at 10PM Eastern, 0200Z/Sunday, on WWCR at either 5810 Khz or 7435 Khz.

I think you are forgetting WWV's mission: they are not out to work DX,
they are trying to provide the maximum coverage to the maximum number of
people. For this, a half-wave vertical dipole is an excellent antenna.
It has a mix of high and low angle radiation and everything in between.
It's the same reason you wouldn't use a beam while conducting a local
net - you need to talk to everybody. A certain amount of phasing has
been used probably to overcome their location at the foot of the
Rockies (just a guess).

Incidentally, there is no such thing as an "antenna with more gain which
would give the same radiation pattern". Can't happen. Antenna gain is
created by intentionally distorting the radiation pattern and/or angle
in the favored direction. You can't get something for nothing.

I'll be the first.

Thank you, Jeff, for not starting another tirade of intolerant,
off-topic posts to the radio groups.

:-)

Text item: Text_1

>...there certainly are antennas with more gain which would
>give the same radiation patterns. Jeff NH6IL

Jeff, would you please explain how a different antenna could have "more
gain" *AND*, at the same time, "give the same radiation patterns"? I
want to build one.

73, KG7BK, Cecil_A_Moore@ccm.hf.intel.com (I don't speak for Intel)

423. Kenwood TH-78A *OR* Yaesu FT-530

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-09 22:01:07 UTC
From: mrw13@namaste.cc.columbia.edu
Message-ID: <2o78j3$o3q@apakabar.cc.columbia.edu>
Source record: 268540
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Has anybody tried both of the above radios and could tell me which of the two I should choose? I hear the Kenwood is nice and small, has a great display, but is a bit hard to program and does suffer from intermod problems. Please email any "votes" or comments. Thanks.

-Marc Wollemborg

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 9/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 9 APRIL AND FORECAST UP TO 12 APRIL

IPS Warning 10 was issued on 31 March and is current
for interval April 3-14 (coronal hole).

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 073/009

1B. SOLAR FORECAST
10 April 11 April 12 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 8 April
Learmonth 28 3445 4444
Fredericksburg 39 29
Planetary 44 40

Observed Kp for 8 April: 5655 5334

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
10 Apr 35 Active to minor storm.
11 Apr 35 Active to minor storm.
12 Apr 35 Active to minor storm.

2C. MAGNETIC COMMENT
Coronal hole induced activity currently in progress.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
09 Apr fair-normal fair poor-fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
10 Apr fair poor poor
11 Apr fair poor poor
12 Apr fair poor poor
3C. GLOBAL HF PROPAGATION COMMENT
Fair-Poor HF comms quality expected at times over next three days.
Conditions at high lats are expected to remain degraded
until April 14.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were about 15% below predicted monthly values

Observed T index for 09 April: 18

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
10 Apr 20 10 to 15% below predicted monthly values.
11 Apr 20 10 to 15% below predicted monthly values.
12 Apr 20 10 to 15% below predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Fair-Poor HF comms conditions expected until April 13, especially
during local night. Depressions of 20-30% observed at Hobart.

W> it's more than that. the cell radio system doesn't like having users
> accessing more than 1 cell at a time (ideally). when you are up in the plane,
> you are able to hit hundreds at the same time. This gives the cell system a
> hernia since it's not set up for such a thing -- i would think the cell radio

1. You would think that the first cell site to pick up your signal would carry it on as far as it could, right? I do see how reaching many at once would pose a problem, but, what about 2. areas where you're in your car and you're in an area where two cells overlap? That does happen, especially here in Alabama where the hills are just large enough to wreak havoc on anything over 400Mhz... But, back to the second part: How would cell phones or sites know which site would carry the phone? I don't see how both would as this would interject other problems which I don't want to get into. The answer to the problem lies in that second part. The only difference in two overlapping on the road and 50+ overlapping in the air is that that one cell that picks your signal up can carry it a lot longer distance... I see how this could cause other problems, though. What about a preson on another cell 20 miles away, who's on the same frequency? You're up high enough to reach it, and it you, so...?

W> if you can't be out of touch for even a couple of hours, why are you even
> getting on a plane in the first place?

You have a point there!

Zach!

427. Ham radio in Germany

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-09 23:48:48 UTC
From: lieser@iccgcc.cs.hh.ab.com
Message-ID: <1994Apr9.184848.1@iccgcc.cs.hh.ab.com>
Source record: 268544

Is the 2-meter band typically the most used band in Europe also (particularly Germany)? I know that in Europe it only extends from 144-146MHz, while the 70cm band is much wider. I had thoughts of taking a small rig while vacationing. Does anyone have any experience with this? (I could only hope that I'd pass the test and receive my license before September.)

I've looked on various ftp sites in Finland and Germany and can't seem to find much info. Also, we don't get 'de' groups here.

Thanks,
Ed Lieser
Allen-Bradley Co., Cleveland, Ohio

428. online repeater directory

```
#
# Universal and Free Listing of Repeaters for Radio Amateurs
#
# ************************************************************************
#
# This version 0.10 (last updated 19940408) of an online repeater
# directory which currently contains circa 750 entries. For obvious
# reasons, all previous versions are obsolete. The last version of
# the database (0.03) is under copyright dispute and is no longer
# available.
#
# This file with all the data will be available for anonymous ftp as
# mipg.upenn.edu:/pub/yee/rptr010.Z
#
# As far as I am aware, all the data below is freely redistributable and
# my intent is to make sure it stays that way. For this reason, I have
# applied the General Public Virus.
#
# The repeater project will now include repeaters from ALL bands and
# is not limited to the US. This reflects the intent to make this
# directory universal.
#
# Contributions of data may be made by anonymous ftp to
# mipg.upenn.edu:/pub/yee/uploads or via email to yee@mipg.upenn.edu.
# The data format has not been changed from the old format so
# contributions that you were planning to make (prior to my recent
# troubles) are still current and most welcome. This repeater listing
# will of use iff people take an active part in making it accurate and
# useful.
#
# In addition to the data below, I also have SERA data and ARCA data
# from the old database but I am unsure of whether I am allowed to
# include this in the revived database.
#
# If there are file format revisions after 0.3, I will worry about the
# file format conversion but I don't expect that there will be any need
# as all or nearly all important fields have already been defined and
# (hopefully) plenty of room has been left for expansion of the field
# definitions. I would like to add a field for linked repeater systems
# but lack the experience to determine how this is best done. I invite
# input. The new field will use some of the reserved fields so that the
# existing data will not become obsolete.
#
```

```
# I make absolutely no claims as to the accuracy of ANYTHING!! There
# are undoubtedly numerous errors all over the place. Some are
# typographical errors (the data has been typed in by hand). Other
# errors are due to outdated information. I do not have the ability to
# confirm entries. With volunteer assistance, any problems will soon
# be found and eliminated.
#
# Thanks go to
# David Bourque (WB1FLD, David_Bourque@smtp.UB.com)
# Tom Bruhns (K7ITM, tomb@lsid.hp.com)
# Errol Casey (KD4IHW, gcasey@bnr.ca),

# ***************************************************************************
#
# The file format (version 0.3) shall be as follows. Consider this file
# format to be in the alpha stage and subject to frequent and arbitrary
# revisions. Each entry will be delineated by being on a different
# line. Each field of a repeater entry shall be delineated by colons.
# The text within a field shall not contain a colon. The field
# definitions are as follows:
```

```
#
# 0 latitude (deg,min,sec)
# Each component of the field shall be delineated by commas.
# 1 longitude (deg,min,sec)
# Each component of the field shall be delineated by commas.
# 2 elevation (meters)
# In backward countries such as the US, the English system is
# still dominant but the metric system isinternationally used.
# 3 height above average terrain (meters)
# In backward countries such as the US, the English system is
# still dominant but the metric system isinternationally used.
# 4 spare location designation if grid squares are used for some
# repeaters while others have the above.
# 5-7 reserved for future use (e.g. ERP)
# 8 continent
# 9 country
# 10 major region designation (e.g. state, province)
# Use standard abbreviations if possible (e.g. NY, CA).
# 11 minor region designation (e.g. county, nearest major city)
# 12 immediate location (e.g. town, city, mountain)
# 13 output frequency of the repeater (MHz)
# 14 input frequency of the repeater (MHz or standard offset: + or -)
# The use of +,- may have to be deleted in the future if this
# repeater directory is extended to other countries that have
# differing standard offsets.
# 15 repeater call sign
# 16 misc. notes (for anything not covered in other fields)
# 17 sponsor (call sign or club name)
# 18 source of entry (call sign preferred)
# If entry is copied from a published source and not personally
# verified, use the organization publishing the data (e.g. ARRL)
# 19 date entry last updated (YYYYMMDD)
# Since published data may only have a year of publication, the
# date shall have a month and date of 0000 (e.g. 19940000).
# 20 PL access (Hertz)
# If multiple for multiple inputs, delineate with commas.
# If none, enter 0.0
# 21 mode (e.g. F3E, A1A)
# 22-27 reserved for future use (e.g. trustee)
#
# Any subsequent fields are free for users to define for their own use.
#
# ***************************************************************************

SB PROP @ ARL $ARLP014
ARLP014 Propagation de KT7H
ZCZC AP28 QST de W1AW Propagation Forecast Bulletin 14
ARLP014
From Tad Cook, KT7H Seattle, WA April 8, 1994
To all radio amateurs

This was a terrible week for propagation. There were several days with no visible sunspots, the solar flux was down about ten points from the previous week, and the geomagnetic field was very active. K indices were at four or five most of the time. Probably the worst day was April 3 when the A index was 48.

The K index is updated every three hours, and can be monitored on WWV at 18 minutes after each hour, along with the A index and Solar Flux. The WWV propagation broadcast can also be heard over the telephone any time at 303-497-3235.

The K index is an indicator of stability of the Earth's geomagnetic field. A single point change in the K index is quite significant. Values below three indicate generally good conditions, while above three means that conditions are difficult. A K index of five is quite bad.

The A index is updated once per day, and is based on the K indices for the previous 24 hours. A one point change in the A index is not very significant. Generally values below ten indicate good conditions, and above ten indicates a poorer outlook.

Look for active geomagnetic conditions to continue for the next week. Solar flux should rise slowly to peak above 100 around April 19 or 20. A indices may not calm down to stable levels until after April 21. Then look for more stormy conditions as old problem areas on the Sun rotate back into view around the end of the month.

Sunspot Numbers from March 31 through April 6 were 61, 28, 0, 0, 0, 11 and 0, with a mean of 14.3. 10.7 cm flux was 85, 82.5, 79.3, 77.4, 77.1, 77.1 and 73.2, with a mean of 78.8.

The path projection for this week is from Salt Lake City to Honolulu.

80 meters looks good from 0430 to 1400z, peaking from 0630 to 1230. 40 meters should be open from 0300 to 1400, with the best conditions from 0500 to 1300. 30 meters should be good from 0100 to 0830 and again from 1600 to 1800. Check 20 meters from 1630 to 0700, with the best period from 0400 to 0630. 17 meters should be open from 1900 to 0330. 15 meters from 2100 to 0000, and on some days as early as 1900 and as late as 0200. 12 and 10 meters do not look good, but on some days 12 meters may be open from 2030 to 0100.

431. How to know if you are a ham.

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-10 01:06:00 UTC
From: FISHERB@a1.mec.mass.EDU
Message-ID: <01HAZHUG1K9Y000FNB@mr.mec.mass.edu>
Source record: 268548

This test is for ham radio operators:

1. Do you say QSL on voice?_____

2. Do you say "For ID" after your call?_____

3. Is it rare for you to have a contact longer than 20 minutes?_____

4. Do you check into traffic nets to up the "body count?"_____

5. Do you check into traffic nets for any reason?_____

6. Do you participate in contests and like it?_____

7. Are you overweight and hold an Extra Class license?_____

8. Have your worked more countries than the number of sexual encounters with your spouse?_____

9. Are you a regular on a two meter repeater?_____

10. Do you dislike children in general?_____

11. Do you ask for help and when received from a number of hams send out a general thank you to everyone in the world?_____

12. Do you think it is wrong to talk about politics or other interesting topics on ham radio?_____

How to Score:

Number of Yes answers:

2 or less- are you sure you are a ham?
4 to 6- you are on the edge of being human or ham.
6 to 8-you are a typical ham-very boring.
8 to 1O-check your pulse, if you find one re-take test.
1O or more. Call the funeral home, send your name into QST as a Silent Key.

Advocates of this cross posting mode rely on software news packages that deliver only one copy of a message to a news server, even if it's posted to ten different newsgroups (cross posted, I mean). The news reader will link to the same file each time it shows up in each of the ten different news groups, but the message is only sent once from the feed to the news server. This kind of software is certainly in use at most unix sites or large organizations.

It does tend to tee off those of us with different software which clutters up a hard drive with ten copies of the message if it's cross posted to ten newsgroups. (And it only aggravates things when they sneer at your "broken" software).

I have suggested in the past that FAQ posters post the entire message in rec.radio.info and pointers to it in all the other newsgroups, but they

insist on doing it this way. And to be fair to them, while I disagree with them, it doesn't take extra bandwidth to send the files, just to store them. Shortening up the expire time a little takes care of it at my site.

MP>> Do you, or anyone reading this, where I can get a DC connector for the
MP>HT?

You'll find that a Sony plug fits well enough into the DC jack. You can
pick them up at Radio Shack for $3. They are part number 270-1575.
They are made to fit into a cable that RS sells, with which you can
change the polarity; but you can solder onto the ends without having to
buy that cable. The only problem: with enough of an up and down
jiggle of the plug, you can cut the supply of current enough to turn the
rig on and off. The outer diameter must be a little too small - those
sneaky Yaesuits! But overall it is less expensive than ordering from
Yaseu. Just watch those bumps in the road!

434. Re: Anyone Bicycle Mobile?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-10 04:24:57 UTC
From: jrl2@crux1.cit.cornell.edu
Message-ID: <2o7v2p$irj@tuba.cit.cornell.edu>
Source record: 268551

Hi,
I just did some bike-mobile operation last tuesday.
I was only biking about 5 miles but this is what I
learned. First my setup. I have an old army ledic
bag that I throw over my shoulder, its strap goes
crosswise accross my chest. I put my handheld in the
bag with the antenna sticking out of the top flap but
tighten the clasps down tight. I have my ht wrapped in a
canvas holdere inside the bag. I attach a clip speacker
mike to the shoulder strap and put the volume way up.
This lets me hear nicely when other people are talking
and lets me compete with wind noise when I'm talking
since the mike is close to my mouth.
I thought abouut one of those fancy ear mikes but
decided agaist it because.
1) its too easy to get hit on your bike anyway, so why
add yet another reason to get distracted
2) too much $$$$
3) would probably hurt if the ht fell out or off and the ear thing
got ripped out.

I have heard that if you connect your ht to your antenna
with a cable between the antenna and the ht, if it falls
its easier on the antenna connector, but I haven't tried
it myself.

I've thought about mounting it on my handle bars but I'm
worried about vibration...

hope this helps.

Greater than 2 MeV Electron Fluence for 09 APR is: 2.3E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low. There were no events
of note. Region 7700 (N08E60) remains stable and is the only
confirmed spotted region.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at unsettled to major storm levels. High latitude stations continued to see unsettled to severe storming through the period. This activity is most likely due to a well positioned coronal hole. Energetic electron fluxes (GT 2 MeV) ranged from moderate to very high through the period.

Geophysical activity forecast: the geomagnetic field is expected to be unsettled to minor storm for the next 24 hours, then will be unsettled to active for the remainder of the forecast period.

Event probabilities 10 apr-12 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 10 apr-12 apr

A. Middle Latitudes
Active 30/30/30
Minor Storm 30/25/30
Major-Severe Storm 15/10/05

B. High Latitudes
Active 30/30/40
Minor Storm 35/30/20
Major-Severe Storm 25/20/15

HF propagation conditions continued well below normal over all regions. High and polar latitude regions continued to see propagation conditions varying from very poor to useless with worst propagation times during the local night sectors. Middle latitudes have also seen substantial signal degradation with fair to very poor propagation. Low latitudes have seen fair to good propagation with periods of poor propagation during the local night hours. Conditions should begin very gradually improving over the next 72 hours as levels of geomagnetic and auroral activity begin to subside. High and polar latitude paths will be the slowest to improve.

SB QST ARL ARLB030
ARLB030 FCC amends packet rule

FCC Amends Rules Concerning Message Forwarding Systems in the
Amateur Service

In an April 4 press release, the FCC announced that it has relaxed
the amateur service rules to enable contemporary message forwarding
systems to operate at hundreds of characters per second while
retaining safeguards to prevent misuse.

A message forwarding system is a group of amateur stations
participating in a voluntary, cooperative, interactive arrangement
where communications from the control operator of an originating
station are transmitted to one or more destination stations via
forwarding stations, which may or may not be automatically
controlled.

Currently, the control operator of each station is held individually
accountable for each message retransmitted, resulting in unnecessary
content review and delays.

The ARRL, in commenting on PR Docket 93-85, stated that the
obligation of the control operator of the first forwarding station

should be the establishment of the identity of the station originating the message. Only when this is not done should these control operators be held accountable for improper message content.

Also, there is currently no central supervisory authority in an ad hoc amateur service digital network, making these unsupervised systems easy targets for misuse by uncooperative operators and nonhams.

Moreover, the Commission said that it could be difficult to establish after the fact that a particular VHF station originated a fleeting high-speed digital transmission.

For these reasons, the Commission said there must be on-going oversight of the system and the control operators of the first forwarding stations are in the best position to provide such oversight.

Therefore, the Commission will hold accountable only the licensees of the station originating a message and the licensee of the first station forwarding a message in a high-speed message forwarding system.

The licensee of the first forwarding station must either authenticate the identity of the station from which it accepts communications on behalf of the system, or accept accountability for the content of the message.

The Commission also clarified that the station that receives a communication directly from the originating station and introduces it into the message forwarding system is the first forwarding station.

The League and the Colorado Council of Amateur Radio Clubs suggested that the Commission substitute the word ''simultaneously'' for ''instantaneously'' in the redefinition of a repeater. The Commission concurred and adopted this modification.

The Commission believes that these rule changes will enable contemporary high-speed message forwarding systems to operate as their designers intended, while retaining the minimum safeguards necessary to prevent misuse.

The effective date of the rules change has not yet been announced.

SAREX Mission STS-59

The Johnson Space Center Amateur Radio Club will manage a small
dial-in telephone BBS during the upcoming SAREX Shuttle mission.
The BBS will have the latest Keplerian element sets available during
the flight. The number is 713- 244-5625, 9600 baud or less.

Additional Shuttle mission information will be available throughout
the flight from the NASA Spacelink computer bulletin board. To
reach the bulletin board, dial 205-895-0028, or on internet use the
address spacelink.msfc.nasa.gov.

The flight is scheduled to launch at 1206 UTC on Friday, April 8.
Amateur Radio licensed crewmembers Jay Apt, N5QWL, and Linda Godwin,
N5RAX, will operate the Shuttle Amateur Radio EXperiment. Apt is
the commander of the Blue Shift and will operate the shuttle systems
during the ''night'' shift, while Godwin is responsible for overall
operation of three large radars in the shuttle's cargo bay during
the ''day'' shift. They will operate both FM voice and packet during
the mission.

Keep posted to W1AW bulletins for additional SAREX information and
updated Keplerian element sets throughout the flight.

Thank to Gil Carman, WA5NOM, and the Johnson Space Center Newsroom
for the preceding information.

Subject: Cell phones in the sky (was Re: Ham radios on planes - Defi...)
To: info-hams@ucsd.edu

In article <linleyCnvEsr.317@netcom.com>, linley@netcom.com (Bruce James Robert Linley) writes:

>Does this mean you shouldn't use a cell phone from moutain tops? :)

Notwithstanding the tounge-in-cheek smiley...
Depends on where you are. If you're in a rural area, then there's probably a rural cell server that is properly frequency planned so as to pose to problem to anyone. A mountaintop in an urban area would be tough...not only on the system but on YOU! Your poor phone also hears every co-channel co-SAT cell in the valley below and it's doubtful you'd be able to hold a call for very long. Yes it does happen to have mountains in the middle of an urban area--Phoenix AZ!
The real skinny on cell phones on A/C: In order to properly allow their use (from the FAA's standpoint), all the A/C avionics would have to be type-accepted against cellular interference in-flight. Which would cost the airlines BIG $ to perform all the testing on their existing equipment. So they simply prohibit them in the interest of safety--maybe they don't affect your plane's systems, but do you want to risk your life on it? But practically, again, in trying to use a cell phone on a plane, you'd receive so much co-channel crap that it's unlikely you'd hear anything intelligible.

Subject: Ham radio in Germany
To: info-hams@ucsd.edu

Is the 2-meter band typically the most used band in Europe also
(particularly Germany)? I know that in Europe it only extends
from 144-146MHz, while the 70cm band is much wider. I had thoughts
of taking a small rig while vacationing. Does anyone have any
experience with this? (I could only hope that I'd pass the test
and receive my license before September.)

I've looked on various ftp sites in Finland and Germany and can't
seem to find much info. Also, we don't get 'de' groups here.

Thanks,
Ed Lieser

>Thus, by dividing by 5 or so, the FM signal can be guaranteed not
>to exceed a deviation of 2.405, and the carrier never disappears and
>will always be of proper phase, assuming that the signal corresponds...
>

You're not saying they use their *modulated* signal as the input to
their frequency comparator, are you? That would cause the carrier to to
re-modulate itself to cancel out it's original modulation as it tried
to stay on center frequency! If you tried to pick out just the
carrier in a divided-by-five signal you'd need a bandwidth of less than

10Hz (at approx. 20MHz), and, dividing or not, you'd end up with a
uselessly small capture range.

Subject: How to know if you are a ham.
To: info-hams@ucsd.edu

This test is for ham radio operators:

1. Do you say QSL on voice?_____

2. Do you say "For ID" after your call?_____

3. Is it rare for you to have a contact longer than 20 minutes?_____

4. Do you check into traffic nets to up the "body count?"_____

5. Do you check into traffic nets for any reason?_____

6. Do you participate in contests and like it?_____

7. Are you overweight and hold an Extra Class license?_____

8. Have your worked more countries than the number of sexual encounters
with your spouse?_____

9. Are you a regular on a two meter repeater?_____

10. Do you dislike children in general?_____

11. Do you ask for help and when received from a number of hams send out
a general thank you to everyone in the world?_____

12. Do you think it is wrong to talk about politics or other interesting
topics on ham radio?_____

How to Score:

Number of Yes answers:

2 or less- are you sure you are a ham?
4 to 6- you are on the edge of being human or ham.
6 to 8-you are a typical ham-very boring.
8 to 1O-check your pulse, if you find one re-take
test.
1O or more. Call the funeral home, send your name
into QST as a Silent Key.

A relatively uneducated observation:
On my analog cellular system, it's pulling teeth just to have the system recognize a few relatively long (0.1sec) DTMF tones to access my voicemail or home answering machine! I can't imagine that anyone actually realizes anywhere near 14.4kbps throughput!

Please explain why crossposting does not use more bandwidth. Inquiring minds would like to know. 10k x 2 lists is 20k of data. How can that not be a waste. It lets more people see it but many people see it more than once and that is an obvious waste of bandwidth. Think about it for a minute.

>The exception is when someone has a feed that gets one of the groups and
>not the other. Then I agree, he might have a valid point if he says
>that it is a waste of bandwidth _on that link_.

Huhhhhhhhhh if it gets only one then you have less data going across. It jsut does not make sense to me.

Notes of Interest.

The only good note for this week is a report from Syd, VK2SG. Syd states that he is improving and seems to be getting better each day. Nice to hear from you Syd and keep up the good health.

The sad note is the DXpedition from Spratly. Propagation was poor, and from what we saw, were calling only on nets and little split operation SSB on 20 meters. No digital, what a pity.

For next week's bulletin, send your Bandpass and Notes of Interest to Jules, W2JGR @ W2TKU.#SRQ.FL.USA.NA

From: orcun@saucer.cc.umr.edu
Message-ID: <1994Apr10.054137.12945@umr.edu>
Source record: 268554

Hi!
I am a complete beginner in radio - my main interest is establishing
communications between US and my home country, Turkey. Presently,
a single point to point communication would suffice.
Problem is ,I am at a complete loss as to what kind of setup I require.
I will set up the equipment at both ends.
Will I need shortwave (if so how do I go about transmitting on shortwave ?)
or have to make use of satellites ? Can you recommend any specific eq
(cost is a major factor here) ?
TIA,
Orcun

Most FM stations, including mine, that use recent FM exciters typically
end up being +/-100 Hz. of the exact assigned carrier frequency. So
this would work out to roughly 1 ppm. accuracy. You can't take this
totally for granted, of course, since the FCC requires only +/- 2 kHz..

Indeed, before checking our UHF two-way stuff, I'll verify that my
Optoelectronics counter is calibrated by looking at the KUFX carrier
first.

Of course, just to be sure that the 94.5 carrier is accurate, I have a
B&K counter which I occasionally calibrate to WWV. Generally, this is
what I prefer to the more convenient Optoelectronics unit since it has
a much better timebase.

Subject: Anyone Bicycle Mobile?
To: info-hams@ucsd.edu

Hi,
I just did some bike-mobile operation last tuesday.
I was only biking about 5 miles but this is what I
learned. First my setup. I have an old army ledic
bag that I throw over my shoulder, its strap goes
crosswise accross my chest. I put my handheld in the
bag with the antenna sticking out of the top flap but
tighten the clasps down tight. I have my ht wrapped in a
canvas holdere inside the bag. I attach a clip speacker
mike to the shoulder strap and put the volume way up.
This lets me hear nicely when other people are talking
and lets me compete with wind noise when I'm talking
since the mike is close to my mouth.
I thought abouut one of those fancy ear mikes but
decided agaist it because.
1) its too easy to get hit on your bike anyway, so why
add yet another reason to get distracted
2) too much $$$$
3) would probably hurt if the ht fell out or off and the ear thing
got ripped out.

I have heard that if you connect your ht to your antenna
with a cable between the antenna and the ht, if it falls
its easier on the antenna connector, but I haven't tried
it myself.

I've thought about mounting it on my handle bars but I'm
worried about vibration...

hope this helps.

Greater than 2 MeV Electron Fluence for 08 APR is: 2.4E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low. There were no events
of note.

Solar activity forecast: solar activity is expected to be
very low. Region 7700 (N08E72) was numbered today.

The geomagnetic field has been at unsettled to major storm
levels. High latitude stations experienced severe storming
for several hours. This activity is most likely due to a well
positioned coronal hole. Energetic electron fluxes (GT 2 MeV)
were mostly high to very high for the entire period.

Geophysical activity forecast: the geomagnetic field is
expected to be at unsettled to minor storm levels for the next
24 hours then mostly unsettled to active for the remainder of
the forecast period. High latitude stations are expected to
have periods of minor to major storming for the entire period.

Event probabilities 09 apr-11 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 09 apr-11 apr

A. Middle Latitudes
Active 30/30/30
Minor Storm 35/30/25
Major-Severe Storm 15/15/15

B. High Latitudes
Active 30/30/30
Minor Storm 35/30/30
Major-Severe Storm 25/20/20

HF propagation conditions remain moderately to strongly
disturbed over the high and polar latitudes with poor to
frequent blackout (useless) conditions. Middle latitudes were
below-normal with poor to occassionally very poor propagation.
Low latitudes were also below-normal but did not suffer as
profoundly as some of the higher latitudes. Conditions are
expected to remain well below normal over the next 24 to 48
hours. Minor improvements, first with the low and middle
latitudes, are expected on 11 or 12 April. Higher latitudes
will require greater time to recover to near-normal values.

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Subject: HELP: my satellite program won't work
To: info-hams@ucsd.edu

Sorry if you got a duplication, I had a little problem posting to the
net.

Anyway, I downloaded the program sattrack for my UNIX box at home and compiled it under linux. Everything went okay until I tried the program. The program kept on telling me that the satellites have "crashed already".

I tried AO-21, Mir and Oscar 13, they all gave me the same result, and I know, for a fact, that the satellites have not been crashed :-).

Please help me, thanks in advance.

73 de KE6BCU, Benjie

-------here are the scripts I used and the results I got back---------------

Here are the lines I used for AO-21:

```
AO-21
1 21087U 91006A 94069.83595116 .00000094 00000-0 82657-4 0 4439
2 21087 82.9370 215.4726 0036191 0.5572 359.5617 13.74535665156075
```

Here is the line I used for Sunnyvale CA in the sites.dat file

```
Sunnyvale CA 37.283333 122.200000 50.0
```

And here is what I got from the program, running "sattrack -v"

```

To: info-hams@ucsd.edu

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 9/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 9 APRIL AND FORECAST UP TO 12 APRIL

IPS Warning 10 was issued on 31 March and is current
for interval April 3-14 (coronal hole).

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 073/009

1B. SOLAR FORECAST
10 April 11 April 12 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 8 April
Learmonth 28 3445 4444
Fredericksburg 39 29
Planetary 44 40

Observed Kp for 8 April: 5655 5334

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
10 Apr 35 Active to minor storm.
11 Apr 35 Active to minor storm.
12 Apr 35 Active to minor storm.

2C. MAGNETIC COMMENT
Coronal hole induced activity currently in progress.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
09 Apr fair-normal fair poor-fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
10 Apr fair poor poor
11 Apr fair poor poor
12 Apr fair poor poor
3C. GLOBAL HF PROPAGATION COMMENT
Fair-Poor HF comms quality expected at times over next three days.
Conditions at high lats are expected to remain degraded
until April 14.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were about 15% below predicted monthly values

Observed T index for 09 April: 18

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
10 Apr 20 10 to 15% below predicted monthly values.
11 Apr 20 10 to 15% below predicted monthly values.
12 Apr 20 10 to 15% below predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Fair-Poor HF comms conditions expected until April 13, especially
during local night. Depressions of 20-30% observed at Hobart.

Subject: Kenwood TH-78A *OR* Yaesu FT-530
To: info-hams@ucsd.edu

Has anybody tried both of the above radios and could tell me which of the two
I should choose? I hear the Kenwood is nice and small, has a great display,
but is a bit hard to program and does suffer from intermod problems. Please
email any "votes" or comments. Thanks.

Subject: Name The New SPECTRUM Show Segment
To: info-hams@ucsd.edu

Ok Gang, here's your chance to be creative. Begining next week my SPECTRUM
newscast will turn into a news and COMMENTARY segment. Other than comming
up with a name for it ourselves, we've decided to let the public decide the
new name. The best we've come up with is "Mini-Crossband" or "Big Steve's
Basement", so we know YOU can do better.

This is just for fun and we'll announce the new title of the segment and the name of lucky individual who came up with it on the April 30th program. There are no prizes except having the winner enshrined in the Spectrum hall of fame, and maybe we'll get Dave to part with a Slim Withman record.

E-Mail your suggestions to me, do not send them to Spectrum or post them. Posted replies will be ignored. Keep 'em clean or forever be twitted to the kill-file at all 132 addresses used by Spectrum, the Omega Radio Network and WWCR.

Spectrum is heard Saturday nights at 10PM Eastern, 0200Z/Sunday, on WWCR at either 5810 Khz or 7435 Khz.

I'll be the first.

Thank you, Jeff, for not starting another tirade of intolerant,
off-topic posts to the radio groups.

:-)

How about ``...more gain which would give the same orientation.''
WWVH's signal is mainly orientated/directed to the west.

But WWV is using just vertical dipoles (not phased, as with WWVH). There are certainly higher gain antennas than a dipole that will still retain an omnidirectional `orientation'.

I used to use a 5/8 mounted on a plate on a rear carrier. It worked quite
well. You will need a large batter for power or your time will be linited.
I would get one of the vox capable hts and you are going to have fun
getting a headset to work with a helmet. It is a blast though. It tests
your conditioning too. My voice would change a little into the wind up a
hill. :-)

I now say: Details, details..... Of course it's W5UN who does SkyMoon.
Somehow old 6-m calls like W5HN seem to replace any "similar" call in my mind?

Thanks for the correction.
Bob w3otc@amsat.org

STS-59 Western R/S Times 04/10

Below are the rise and set times for STS-59 for selected US cities
over the next three days. This data was generated to help hams without
orbit programs to participate in the SAREX activities. Please note that
the times shown are UTC and NOT LOCAL TIME. This listing includes only
those passes with an elevation greater than 5 degrees. For information
regarding SAREX frequencies and operations procedures, check your
local PBBS, or bulletins from W1AW, W5RRR, W6VIO or WA3NAN.

Symbol key: rise = time that shuttle appears above horizon
tca = time of closest approach to observer
set = time that shuttle disappears below horizon
el = maximium elevation above horizon
geo = geometry: A = Ascending orbit, moving south to north
D = Descending orbit, moving north to south
E = passes east of observer
W = passes west of observer

446. Need Help

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-10 12:43:33 UTC
From: psmith@convex.com
Message-ID: <2o8s9l$t6a@lovecraft.convex.com>
Source record: 268563

I received the following message from Peter, SP9TNM and I don't know of a source of supply for this item. If you have knowledge of where I can get this, please send me address, phone, or other information on how to obtain this.

I will purchase it and mail it to him. He's trying to set this machine up for packet...

Send any information to psmith@convex.com

Thanks and 73 Presley N5VGC

Subject: HEEEEEEEEEEELP !!!
To: psmith@convex.com
Date: Sun, 10 Apr 94 10:54:28 cet
From: "Piotr J. Ochwal" <ochwal@usctoux1.cto.us.edu.pl>

Howdy!

Presley! I have a small request for you. Maybe the fact, you live in America will be significant for it ;-)

recently I have bought a small PC - Atari Portfolio and I'd like to use it for packet-radio. I managed to find even the circuitdiagram for the modem device, but there is still ONE BIG problem. I hunt for an ATARI PORTFOLIO BUS CONNECTOR. It is the extraordinary female connector used for connecting to the Portfolio bus. please! ask for it your friends, colleagues, ham's, everyone; because it is IMPOSSIBLE to get this part in Poland. I will pay any reasonable price for it...

Thanks in advance and waiting for answer,

Peter, SP9TNM @ SP9TNM

447. Re: baud and Byte/s

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-10 13:33:33 UTC
From: jim@n5ial.mythical.com
Message-ID: <1994Apr10.133333.18754@n5ial.mythical.com>
Source record: 268564

In article <2o3tcm$62p@sophia.inria.fr> jmhertz@zig.inria.fr
(Jan-Martin Hertzsch) writes:

>I'm not a "packeteer", so excuse my lack of knowledge:
>Which relation exists between the units mentioned above?
>Is there a factor saying how many Byte/s make one baud
>or vice versa?

First off, instead of bytes per second, it's better to refer to characters per second (cps). The reason for this is simple: a byte is 8 bits, period, but a character is not always 8 bits (e.g., between a modem and a computer on a serial link, a character is 8 data bits plus 1 start bit and 1 stop bit, or 10 bits ... but between two error correcting modems, that same character is only 8 bits).

The following is one of my ``standard replies'' for comp.dcom.modems when this topic comes up. Of course, baud, bps, and cps are all generic data communications terms, so the explanation works here, too.....

--------------------------- CUT HERE ---------------------------
Baud refers to the symbol rate on the line. In other words, the rate at which the levels, frequencies, etc., are changing. V.32bis operates at 2400 baud, meaning that 2400 times/second, the signal on the line changes state. This does not, however, tell you what the actual link speed is.

The link speed, measured in bits/second (bps), is a combination of the baud rate and the number of bits/symbol. For example, V.32bis, when operating at 14,400 bps, transmits 6 bits in each state change on the line. Thus, while it is only operating at 2400 baud, it is running at 14,400 bps.

Let's break things down a bit more..... We're going to use an imaginary modem for this example. This modem will use only frequency shift keying, or FSK (this is *NOT* a real-world modem....this is only to make the explanation simple). To begin with, it will switch between only two frequencies, frequency A and frequency B. Let's say that frequency A represents a logical 0 (zero), and frequency B represents a logical 1 (one).

The baud rate would be the number of times per second the signal changes (e.g., from A to B, B to A, A to A, or B to B) per second. Because there are only two possible values here, the bit rate happens to equal the baud rate, and if the modem is operating at 1200 baud, it is also operating at 1200 bps.

Now let's make our hypothetical modem a little more complex. Instead of operating between only two frequencies, let's make it four (A, B, C, and D). The symbol values would then look something like this:

A = 00
B = 01
C = 10
D = 11

In this case, there are two bits of data transmitted for each symbol change.
Therefore, if the modem is operating at 1200 baud, it is operating at
2400 bps.
---------- CUT HERE ----------

Does that make sense?

Later,
--jim

448. Looking for TM-241 schematics

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-10 13:40:13 UTC
From: wisznie@ecf.toronto.edu
Message-ID: <Co1pz1.KrD@ecf.toronto.edu>
Source record: 268565

This is for a friend of mine:

I'm looking for schematics for the TM-241A radio. My radio went
bad recently (power dropping whenever the radio gets warm) and I'd like
to give it a shot at fixing it. The schematics I got with the
radio are actually for the -541 and -441 version but not -241.
I'd appreciate it very much if anyone would send me a copy (of course,
I would provide a SASE).

Thanx very much
Alex VE3GOP

>chief engineer.

He probably won't know. Ask for the operator on duty, he can give you
moment by moment readings off his display, if he still has one. Note
that FM broadcasters only have to maintain a tolerance of +/- 1000 Hz from
their assigned frequency. Note also that their assigned frequency may
have up to a 10 kHz offset from normal channel center if they're close
spaced with another station. So *ask* what their nominal carrier frequency
is, don't assume its the nominal channel center.

The same goes for TV broadcast. Note too that we aren't required to
maintain a Type Accepted frequency monitor anymore, and only have
to have our transmitters checked once a month for compliance to the
+/- 1000 Hz rule, sometimes with an Opto counter. :-(

Go with zero beating WWV.

Gary

No, it's half that amount. FM and TV tolerance is +/- 1000 Hz, AM is
+/- 10 Hz. As to your latter comment, don't bet on it. The rules now
only require checking frequency once a month.

>uselessly small capture range.

No. All you need is a low pass filter in the PLL error loop with a
cutoff of less than 10 Hz. Since many transmitters *modulate* the
transmit VCO, there's no point where you can get carrier without
modulation in the transmitter. This is the same way your synthesized
2 meter HT works. It doesn't have a narrow bandwidth filter to
"pick out" the carrier either, just a low pass response in the error
feedback network so it smooths out *long term* frequency error, but
not the audio modulation.

Around here, I am unhappy to report that there are a lot of stations that
just barely meet the +/- 2 kHz requirement and at least one that doesn't.
(Admittedly one of them is using a 1952 vintage RCA exciter that was designed
originally for the 40 MHz band, which RCA resold as an 88 MHz exciter by
replacing the final 6146 stage with a frequency doubler, and as a result
the drift is multiplied).

Most of the stations out here in rural VA don't have engineers on-staff
any longer, and they only fix things when they become catastrophically
broken. This does not tend to result in the best quality signal making
it out over the air.

SB SAREX @ AMSAT $STS-59.009
SAREX Update & Keps 4/10/94

Greenbelt, MD, April 10, 1994 at 16:00 UTC

After the successful check pass yesterday, the SAREX Working Group has had several reports of packet radio operation and some general voice QSO operation during the Shuttle passes over the U.S. In addition, the St. Bernard High School in Playa Del Rey, CA had a very excellent school group pass this morning (Rev 19). A total of seven questions were asked by the students.

The official SAREX element set for today will be GSFC-007. This element sent was generated by Ron Parise, WA4SIR of the Goddard Space Flight Center. Gil Carman, WA5NOM reports that the predictions using GSFC-007 differed from JSC-009 by approximately 20 seconds. GSFC-007 follows:

STS-59
1 23042U 94020A 94100.26164012 0.00018681 11051-4 10679-4 0 75

459. Logging program for Macintosh

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-10 17:44:03 UTC
From: tstader@aol.com
Message-ID: <2o9dt3$c28@search01.news.aol.com>
Source record: 268576

In article <1994Apr7.112736.25572@cobra.uni.edu>, spurra8478@cobra.uni.edu writes:

From my list "Macintosh Amateur Radio Software - March 1994":

*** Logging ***
<Ham Radio Station Logbook>
HyperCard stack that stores and displays radio contact information. Automatically stamps entries with time and date. Contacts can be sorted by frequency, call sign, or date of contact. Includes report formats, a "Q-code" reference list, and on-line help. SanSoft, 892 E. Quail Place, Highlands Ranch, CO 80126. (The same program appears to be available from Heizer Software, 1941 Oak Park Blvd., Suite 30, Pleasant Hill, CA 94523.)

<FDLog!>
Contact logging and duping program. Can transmit any of ten programmable CW messages. Generates real-time statistics on QSO rates. System One Control, 3900 85th Ave N, Suite 200, Brooklyn Park, MN 55443.

<MacContest 3.5>
Allows real-time or post-contest logging of a wide variety of contests. Checks for dupes, figures scores instantly, and offers various printouts. Interfaces to TNCs for CW and RTTY contests, to DX packet clusters, to Kenwood transceivers, and to MacinTalk for easy post-contest entry. Gerald Eberle, HB9CEY, P.O. Box 13, CH-4417 Ziefen, Switzerland.

<LOGic>
(Macintosh version scheduled.) Lets you define the rules determining dupes (such as once per band or once per contest). Displays heading, distance, and other information about the country being worked. Automatically enters contact time; if interfaced directly to a radio, also enters the frequency, band, and mode. Shows status toward earning amateur-radio awards. User-definable database fields. Exchanges data with other programs. Personal Database Applications, 2634 Meadow Bend Court, Duluth, GA 30136.

<HF Logger 1.2>
A real fine HyperCard logging program! (hey... thats all I got!) N0QGQ

<Simple Log .2b>
This little utility is a handy way to create a logging file that you can later import into any data base for analysis, etc. It also shows you that just about anyone can use Think C and create something on the Mac! Let me know if you'd like the source code. WD1V @ WA1WOK.NH.USA.NA Author is John Seney - WD1V, e-mail address is jseney@aol.com. 466. WWV Antennas

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-10 21:03:54 UTC
From: Cecil_A_Moore@ccm.CH.INTel.COM
Message-ID: <940410130354_1@ccm.hf.intel.com>
Source record: 268632

Text item: Text_1

> But WWV is using just vertical dipoles (not phased, as with WWVH). There
> are certainly higher gain antennas than a dipole that will still retain
> an omnidirectional `orientation'. Jeff NH6IL

Hello again, Jeff. My point is that one cannot change the gain of an
antenna system without changing the radiation pattern. In that
process, while Hawaii may enjoy an increase in signal level,
Arizona may suffer a decrease in signal level. Who's going to
be forced to suffer because of the antenna system change?

73, KG7BK, Cecil_A_Moore@ccm.hf.intel.com (I do not speak for Intel)

Source record: 268633

I think that people are applying 2-D thinking to a 3-D
world. There are two main ways of getting "gain", both
of which involve concentrating power in one direction
at the expense of another. WWVH uses what is known
as a broadside or endfire (can't remember which it was
from the description) array of vertical dipoles to create
a pattern, which when viewed from above, appears to
concentrate its power to the west.

However, there is another way to concentrate power, which
is what most FM broadcast stations do. If you look at
a single dipole vertically oriented, you will see that it
has a omni pattern viewed from above. Fine. If you
now view it from the ground, a lot of power goes up into the air,
some of it at nearly 90 degrees to the ground. (An ideal
dipole has a null at 90 deg.) Now, recall what you learned
about HF propogation. Power that is sent nearly straight
up has a much lower chance of skipping (being refracted) than
one with a low angle of incidence. Thus, that power is most likely
being wasted. A stacked dipole of proper phasing (two dipoles
on top of another) can use constructive interference to put more
power closer to the horizon rather than up in the air.
This puts more power into the low angles of incidence which are
much more likely to be refracted and/or reflected back down
to earth. Note, however, that the omni pattern as viewed
from above is NOT disturbed. This is how one gets "omni"
gain. FM broadcasters do this to put as much power as
possible into the horizon. Not much advertising potential high
up in the air.....

Ken

SB DX @ ALLBBS $OPDX.154
Ohio/Penn DX Bulletin No. 154

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 154
BID: $OPDX.154
April 11, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DL7VEE & DXNL, DF4RD, OH3MEP, ON6TT, NA2M, W2QM, WB3JFS, K8CEF & Southeastern Cluster Group, KF8VW, W8XD, WD0GML and N0TG for the following DX information.

9G, GHANA. The DX NewsLetter (DXNL) reports that Peter, ex XT2BW, is now active as 9G1PW. He was heard on the Ohio/Penn DX Network, April 4th, on 21297 kHz at 1428z. He left XT-land at the end of January and is supposedly to be in Ghana (on vacation with his family) for 2 to 3 months. QSL via WB2YQH after his return.

9N, NEPAL. The DXNL reports that Marlo, IK3HAQ is trying to become active from Nepal from April 6-24. No other details were given.

9X, RWANDA. After announcing his extented stay until the end of May, Paul, F6EXV, who is active as 9X5DX, may be coming home sooner than expected. According to the news wires, foreigners began fleeing the country Friday, April 8th. French paratroopers landed at the airport in Kigali, and a massive evacuation has begun with some 600 French and other foreigners leaving Rwanda. Paul has not been heard since April 4th on the Ohio/Penn DX Cluster Network. Everyone is hoping that Paul is well.

CY9, ST. PAUL ISLAND. Plans are in the works for a July 1-7 operation. The operators will be KW2P, WA4DAN, AA4VK, N0TG and possibly W0RJU. This is the same group that was active from KP1 and KP5 in 1992/1993. The group has landing permission and arrangements for the boat has been made. More details will be announced later.

HV, VATICAN. It has been reported that Bob, N2EDF, will be active from HV4NAC, April 14-19. There was no specific bands or frequencies or QSL route mentioned.

JY, JORAN. Ibrahim, JY5IN, sometimes shows up on a DX Net on 14243 khz around 0615z or on 14247 kHz around 2230z.

OH0, ALAND ISLAND. It looks like there will be plenty of activity during the month of April. Pete, OH3MEP, states he will be active as OH0MEP for one week beginning April 16th. Also, around the same time, begin looking for OH0NLP, OH0LQK, OH0LIU, OH0LYA and OH0KAG. Some of the stations will be active on all bands, RTTY and the satellite.

PACIFIC DXPEDITIONS. Ron, ZL1AMO, will be active sometime next week as 3D2RW. He has other plans which are not complete as of yet, but there are good possibilites that Ron will be active from C21, T28RW and ZK3. He is especially interested in a trip to T30 (because he has never been there).

V4, NEVIS AND VP2E, ANGUILLA. NODXA members (Jack/KB8WC and Scott/KO8O) and some users of the Ohio/Penn DX Cluster Network will be on their annual Spring Caribbean DXpedition, starting April 18th, signing VP2EOH. QSL via K8BL.
On Thursday, April 21st, Jack and Scott, will fly to Nevis and operate as V47WC on SSB, and V47RS on CW. QSL V47WC via KB8WC and V47RS via KO8O. They will return home on April 27th, so that they will recover in time for the Dayton HamVention.

VP8, ANTARCTICA. Gavin, VP8GAV, continues to be active from the British Antarctic base of Rothera. He has been heard between 3500 and 3506 kHz around 0515z; and again between 1015 and 1100z. He also shows up on 20 meter CW or SSB, starting around 0030z on 14017 or 14245 kHz. QSL via GM0LVI.

OH YEA! DID YOU HEAR ANYTHING ABOUT THE CARDS FOR ....?
3Y0PI CARDS. Peter, ON6TT, (one of the operators) released the following statement on April 7th: "The 3Y-cards are in print as of today. They will be finished by the end of April. Once we receive the cards from the Belgium printer, they will be sent to the states. Expect the cards to come out as of May." Also QSL Manager Jerry, AA6BB, has stated that the labels are now 75% completed from the logs.
FS/W2QM CARDS. Dave, W2QM, states, that cards for his 1993, Decemeber 1-8, operation have started going out in the mail. All should be out in a few weeks.
KG4CI AND KGWP CARDS. QSL cards for this KG4 operation between February 24th and March 2nd by Nellie/XE1CI and Dave/WQ5Y should have been shipped from the printer and should be in the hands of Dave (as of April 7th). Since each operator will be responsible for his/her QSLing, half of the shipment of cards will be sent to Nellie in Mexico City. Just a reminder, QSL KG4WP to WQ5Y and KG4CI to XE1CI. Do not QSL to the KG4 Bureau.
VQ9TV QSL MANAGER CHANGE. Mike, WD0GML, informed OPDX that Floyd Gerald, N5FG, is the new QSL manager for Bill Rowe, VQ9TV. Floyd has all of Bill's logs and can respond to all QSL requests for VQ9TV. QSLs can be sent to: Floyd Gerald, 4706 Washington Ave., Gulfport, MS. 39507.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

W5RRR/JSC ARC LANDLINE BBS

HR AMSAT NEWS SERVICE BULLETIN 099.01 FROM AMSAT HQ
SILVER SPRING, MD APRIL 9, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-099.01

New Landline BBS Provides STS-59 SAREX Information

The Johnson Space Center Amateur Radio Club has set up a telephone computer bulletin board (BBS). The purpose of the BBS is to provide a source of current Space Shuttle mission Keplerian Elements.

There are limited number of BBS files available for downloading. Among the current files are:

o Current and old element sets for the mission in progress
o Current mission information
o Shuttle Amateur Radio Experiment (SAREX) information
o Recent Space Shuttle Mission Schedules and Manifests
o Astronaut/Cosmonaut Ham List
o Current JSC Amateur Radio Club Newsletter

We ask that no files be uploaded to the BBS. The telephone number is (713) 244-5625. Our modem can handle all bauds up to and including 9600 baud. The parameters are N-8-1.

The BBS is currently running in ProComm HOST mode, so the logon is very simple and downloading is easy. After logging in, you will see the Welcome Screen describing the BBS. Also, the Welcome Screen contains the current and latest element set number (e.g., JSC008) loaded on the BBS. Check it against your last set so you won't waste your time duplicating a set you already have. Press ENTER to bring up the second page containing the current Space Shuttle Keplerian Element Set. If you have a file capture or screen capture function in your communications software, then you should use it for this page. That way, you won't have to go through the file download process if all you wanted was the latest element set. If you have any comments for the Club or BBS sysop, leave a message and we will respond.

[The AMSAT News Service would like to thank Dale Martin (KG5U), KG5U @ KA5KTH.#setx.tx.usa.na, Secretary of the Johnson Space Center ARC Houston, Texas (W5RRR)]

FUJI AWARD PROGRAM DETAILS

HR AMSAT NEWS SERVICE BULLETIN 099.02 FROM AMSAT HQ
SILVER SPRING, MD APRIL 9, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-099.02

JJ1WTK Provides Information About "FUJI" Award

Amateur Satellite "Fuji", SWL Amateur Satellite "Fuji" applicants are required to make contacts with 10 different amateur stations through the amateur radio satellite "Fuji" (only contacts in CW or SSB mode), and obtain the QSL cards from those stations. This award applies for both FO-12 (JAS-1) which was launched at 20:45 UTC in 12-AUG-1986 and JAS-1B which was launched on 07-FEB-1990. Any contact thru FO-12 or FO-20 is good for the "Fuji Award" application. A fee of 8 IRCs or US $4 will be charged per award. An additional 2 IRCs will be charged for air mail delivery regardless of the number of the awards claimed. If QSL cards are submitted, sufficient funds for return postage will also be required. All corres-pondences should be sent to:

Japan Amateur Radio League - Award Desk,
1-14-2 Sugamo, Toshima, Tokyo 170, Japan

[The AMSAT News Service would like to thank Kazu Sakamoto (JJ1WTK) for this bulletin item. JJ1WTK can be reached at his e-mail address of qga02014@niftyserve.or.jp]

CT1ERC Reports POSAT-1 Voice Contacts Made

CT1ERC reports that a special event amateur satellite station, CU2APO, was setup on the island of San Miguel in the AZORES for a technical exhibition to a youth grounp using POSAT-1. This demonstration was arranged by the PoSAT Consortium in which they agree to switch the satellite to operate on the amateur frequencies and it was configured as a FM transponder for a single pass to allow voice contacts between this island in the middle of the Atlantic ocean and the continent. Everything was arranged overnight and on short notice so unfotunately there was not enough time to send out notices of this event for other radio amateurs to participate. However, CT1ERC wishes to pass allong his report of the this first time voice contact on POSAT-1.

"The uplink frequency was 145.975 MHz and the downlink frequency was 435.275 MHz which by coincidence is a frequency with alot of strong QRM at

CT1ERC's QTH. At 12:28 UTC 24-FEB-1994, with the satellite heading from North, the mutual window between CT1ERC's station (located in the extreme North of Portugal) and CU2APO (located in the extreme West, half way to N. America) opened and he exchanged a QSO with Pedro Carvalho (CT1DBS). The reports were both S59 but only for short periods, due to the strong bursts of QRM which made communication very difficult. One minute later there appeared Miguel Gomes (CT1EVH) operating the club station CS1APO located in Lisbon and Artur Gomes (CT1DIA) located in Faro (extreme South of Portugal). The QRM affected all stations except CT1DIA who have copy all of us during the whole pass with reports between S57 and S59. Sometimes during the pass two Spanish stations, apparently mobile, in a QSO on the VHF band were completly unaware that they were using a satellite uplink and reaching the downlink with S55 to S57."

CT1ERC wants to thank to the the Consortium for made the satellite available for 10 minutes and to Pedro, CT1DBS, for all his efforts and hours spent in convencing the POSAT Consortium to allow this demonstation to happen.

[The AMSAT News Service (ANS) would like to thank Jose Carlos (CT1ERC) for this bulletin item.]

AO-13 OPS NET SCHEDULE

HR AMSAT NEWS SERVICE BULLETIN 099.04 FROM AMSAT HQ
SILVER SPRING, MD APRIL 9, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-099.04

Current AMSAT Operations Net Schedule For AO-13

AMSAT Operations Nets are planned for the following times. Mode-B Nets are conducted on AO-13 on a downlink frequency of 145.950 MHz. If, at the start of the OPS Net, the frequency of 145.950 MHz is being used for a QSO, OPS Net enthusiasts are asked to move to the alternate frequency of 145.955 MHz.

Date UTC Mode Phs NCS Alt NCS

18-Apr-94 0100 B 188 W5IU WA5ZIB
23-Apr-94 1800 B 180 VE2LVC W9ODI
30-Apr-94 2130 B 176 W9ODI VE2LVC
09-May-94 0000 B 175 W5IU WA5ZIB
14-May-94 1700 B 167 WA5ZIB W5IU
21-May-94 2130 B 185 VE2LVC W9ODI

Any stations with information on current events would be most welcomed. Also, those interested in discussing technical issues or who have questions about any particular aspect of OSCAR statellite operations, are encouraged to join the OPS Nets. If neither of the Net Control Stations show up, any participant is invited to act as the NCS.

Slow Scanners are invited to join the SSTV sessions on AO-13. The frequency is 145.955 MHz. The net meets at 45 minutes before Mode S, and on Mode B following Mode S on Saturdays and Sundays. Join those sessions or convey your wishes for other SSTV skeds to wb6llo@amsat.org, and he will coordinate your efforts.

[G3RUH/DB2OS/VK5AGR]

FO-20: The following is the current schedule for transponder operations:
ANALOG MODE:
20-Apr-94 7:35 -to- 27-Apr-94 7:55 UTC
11-May-94 6:54 -to- 18-May-94 7:20 UTC
Digital mode: Unless otherwise noted above.
[Kazu Sakamoto (JJ1WTK) qga02014@niftyserve.or.jp]

AO-27: DL6AAU reports that he has hear some "big" signals from AO-27 with a indoor groundplane antenna without preamp. He receives signals S56 to S59 from stations on Buffin Island, which for DL6AAU, is considered a DX contact. DL6AAU notes that AO-27 really better signal than its famous "cousin" AO-21. [DL6UAA]

AO-21: A new digital voice message started to transmit this week on AO-21 on the occasion of the AMSAT-OE meeting. The actual schedule is as follows:

RUDAK-II Schedule: (Downlink 145.987 MHz, Uplink 435.016 MHz)
min/10 Beacon Mode
0..6 FM Repeater
7 Digital Audio
8..9 AFSK TLM
The following is the message that is broadcasted on AO-21 during the packet beacon downlink: "++ Hi, this is the RUDAK-II experiment on AMSAT OSCAR 21 ++ On occasion of the first AMSAT-OE meeting we send greetings to HAM's & all over the world. We wish you to have PEACEFUL contacts via amateur

radio!" Reports are welcome to:
HTL
Amateur Radio Group
Anichstr. 46
A-6020 Innsbruck
Austria

[LW2DTZ]

KO-23: Working well and has a new pair of images. [WH6I]

KO-25: Also working well. [WH6I]

IO-26: Working well on the secondary frequency as advertised. [WH6I]

AO-16: Working well. [WH6I]

LO-19: Also working well. [WH6I]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

I used to use a 5/8 mounted on a plate on a rear carrier. It worked quite
well. You will need a large batter for power or your time will be linited.
I would get one of the vox capable hts and you are going to have fun
getting a headset to work with a helmet. It is a blast though. It tests
your conditioning too. My voice would change a little into the wind up a
hill. :-)

Anyone have a feel for how long licenses take to get from FCC Gettysburg?
Last I heard it was 10 weeks :-(

I passed my Tech this morning (and bought some code practice stuff :-)
The VEC said (jokingly, I hope!) that I could be up to 20 wpm by the time
I see a license.

Good Luck! I took my exam back on Feb. 12 in central Illinois hoping to
get my callsign by Hamvention (Last weekend in April). I have heard recently
that some ppl have waited up to 13 wks for there callsign.

Still hoping to get it in time

No, it's half that amount. FM and TV tolerance is +/- 1000 Hz, AM is
+/- 10 Hz. As to your latter comment, don't bet on it. The rules now
only require checking frequency once a month.

>Why not call up the broadcast station and ask them? Ask to speak to the
>chief engineer.

He probably won't know. Ask for the operator on duty, he can give you
moment by moment readings off his display, if he still has one. Note
that FM broadcasters only have to maintain a tolerance of +/- 1000 Hz from
their assigned frequency. Note also that their assigned frequency may
have up to a 10 kHz offset from normal channel center if they're close
spaced with another station. So *ask* what their nominal carrier frequency
is, don't assume its the nominal channel center.

The same goes for TV broadcast. Note too that we aren't required to
maintain a Type Accepted frequency monitor anymore, and only have
to have our transmitters checked once a month for compliance to the
+/- 1000 Hz rule, sometimes with an Opto counter. :-(

Go with zero beating WWV.

>10Hz (at approx. 20MHz), and, dividing or not, you'd end up with a
>uselessly small capture range.

No. All you need is a low pass filter in the PLL error loop with a
cutoff of less than 10 Hz. Since many transmitters *modulate* the
transmit VCO, there's no point where you can get carrier without
modulation in the transmitter. This is the same way your synthesized
2 meter HT works. It doesn't have a narrow bandwidth filter to
"pick out" the carrier either, just a low pass response in the error
feedback network so it smooths out *long term* frequency error, but
not the audio modulation.

Gary

SB SAREX @ AMSAT $STS-59.009
SAREX Update & Keps 4/10/94

Greenbelt, MD, April 10, 1994 at 16:00 UTC

After the successful check pass yesterday, the SAREX Working Group has had
several reports of packet radio operation and some general voice QSO
operation during the Shuttle passes over the U.S. In addition, the
St. Bernard High School in Playa Del Rey, CA had a very excellent school

group pass this morning (Rev 19). A total of seven questions were asked
by the students.

The official SAREX element set for today will be GSFC-007. This
element sent was generated by Ron Parise, WA4SIR of the Goddard Space
Flight Center. Gil Carman, WA5NOM reports that the predictions using
GSFC-007 differed from JSC-009 by approximately 20 seconds. GSFC-007
follows:

STS-59
1 23042U 94020A 94100.26164012 0.00018681 11051-4 10679-4 0 75
2 23042 56.9969 260.0497 0009381 274.0340 85.9677 16.20558915 145

Satellite: STS-59
Catalog number: 23042
Epoch time: 94100.26164012 (10 APR 94 06:16:45.71 UTC)
Element set: GSFC-007
Inclination: 56.9969 deg
RA of node: 260.0497 deg Space Shuttle Flight STS-59
Eccentricity: 0.0009381 Keplerian Elements
Arg of perigee: 274.0340 deg
Mean anomaly: 85.9677 deg
Mean motion: 16.20558915 rev/day Semi-major Axis: 6596.1671 Km
Decay rate: 0.19E-03 rev/day*2 Apogee Alt: 223.97 Km
Epoch rev: 14 Perigee Alt: 211.59 Km

NOTE - This element set is based on NORAD element set # 007.
The spacecraft has been propagated to the next ascending
node, and the orbit number has been adjusted to bring it
into agreement with the NASA numbering convention.

Submitted by Frank H. Bauer, KA3HDO for the SAREX Working Group

Oh well, at least it makes a change from the usual 'unknown host' problems.
Catch is, you can 't send him an email to tell him his mailbox is full :-)

> But WWV is using just vertical dipoles (not phased, as with WWVH). There
> are certainly higher gain antennas than a dipole that will still retain
> an omnidirectional `orientation'. Jeff NH6IL

Hello again, Jeff. My point is that one cannot change the gain of an
antenna system without changing the radiation pattern. In that
process, while Hawaii may enjoy an increase in signal level,
Arizona may suffer a decrease in signal level. Who's going to
be forced to suffer because of the antenna system change?

Subject: WWV Antennas
To: info-hams@ucsd.edu

I think that people are applying 2-D thinking to a 3-D
world. There are two main ways of getting "gain", both
of which involve concentrating power in one direction
at the expense of another. WWVH uses what is known
as a broadside or endfire (can't remember which it was
from the description) array of vertical dipoles to create
a pattern, which when viewed from above, appears to
concentrate its power to the west.

However, there is another way to concentrate power, which
is what most FM broadcast stations do. If you look at
a single dipole vertically oriented, you will see that it
has a omni pattern viewed from above. Fine. If you
now view it from the ground, a lot of power goes up into the air,
some of it at nearly 90 degrees to the ground. (An ideal
dipole has a null at 90 deg.) Now, recall what you learned
about HF propogation. Power that is sent nearly straight
up has a much lower chance of skipping (being refracted) than
one with a low angle of incidence. Thus, that power is most likely
being wasted. A stacked dipole of proper phasing (two dipoles
on top of another) can use constructive interference to put more
power closer to the horizon rather than up in the air.
This puts more power into the low angles of incidence which are
much more likely to be refracted and/or reflected back down
to earth. Note, however, that the omni pattern as viewed
from above is NOT disturbed. This is how one gets "omni"
gain. FM broadcasters do this to put as much power as
possible into the horizon. Not much advertising potential high
up in the air.....

Ken

>totally for granted, of course, since the FCC requires only +/- 2 kHz..

Around here, I am unhappy to report that there are a lot of stations that
just barely meet the +/- 2 kHz requirement and at least one that doesn't.
(Admittedly one of them is using a 1952 vintage RCA exciter that was designed
originally for the 40 MHz band, which RCA resold as an 88 MHz exciter by
replacing the final 6146 stage with a frequency doubler, and as a result
the drift is multiplied).

Most of the stations out here in rural VA don't have engineers on-staff
any longer, and they only fix things when they become catastrophically
broken. This does not tend to result in the best quality signal making
it out over the air.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 10/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 10 APRIL AND FORECAST UP TO 13 APRIL

IPS Warning 10 was issued on 31 March and is current
for intyerval April 3-14 (coronal hole).

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 075/013

1B. SOLAR FORECAST
11 April 12 April 13 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active, with one minor
storm period

Estimated Indices : A K Observed A Index 9 April
Learmonth 23 3334 5443
Fredericksburg 25 39
Planetary 30 45

Observed Kp for 9 April: 6556 5444

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
11 Apr 25 Active.
12 Apr 25 Active.
13 Apr 25 Active.

2C. MAGNETIC COMMENT
None.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
10 Apr normal fair fair-poor
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
11 Apr fair poor poor
12 Apr fair poor poor
13 Apr fair poor poor
3C. GLOBAL HF PROPAGATION COMMENT
Fair-Poor HF comms quality expected at times over next three days.
Conditions at high lats are expected to remain degraded
until April 14.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were 10 to 15% below predicted monthly values

Observed T index for 10 April: 9

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
11 Apr 0 15 to 20% below predicted monthly values.
12 Apr 20 10 to 15% below predicted monthly values.
13 Apr 20 10 to 15% below predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Fair-Poor HF comms conditions expected until April 13, especially
during local night. Depressions of 20-30% observed at Hobart.
Strong sporadic E layer is expected at times today.

From: wb6w@netcom.com
Message-ID: <wb6wCo2IC7.1tC@netcom.com>
Source record: 268639

...I've modified my Icon 271E for 9600 (also an MFJ TNC/modem). As I recall the signal injection point I used was the wiper of the audio level pot leading to the varactor. There is a blocking cap on this line already. I fed my sig thru a non-polarized 1mmf cap and a 1K resistor.

The "conventional wisdom" scheme is to connect through a cap & 10K resistor to the varactor - but this does not seem to work.

By the by - the circuit in this area is the same in several Icom radios, the IC-290 and IC-490 being among them.

> > >
> > >Actually, a properly cross-posted article does not use any more bandwidth
> > >than an article posted to only one newsgroup. That is why crossposting
> > >is different from posting many times.

It occurs to me that a particular Newsgroup should pertain to a specific topic.
Not a jumble of as many things as can be stuffed into it. That is the obvious
intention of having so MANY different, and exciting newgroups to choose from.

Although "Cross Posting" as you call it, may not incur additional "bandwidth"
in posting the original article, it certainly does increase the size of each
newsgroups dumped message. Since I am using UUCP which costs me .10 Cents
a minute to retrieve my newsgroups, it's even more annoying to find that I'm
getting mutlipule copies of material I am not even remotely interested in
being placed along-side info that I am very much interested in, simply because
it is remotely connected to Ham-Radio. I would not fault the newgroups
themselves as much as I would the person or group that was doing the posting.

That sorta shoots the who Idea of having so MANY newsgroups in the foot
doesn't it?

If I subscribe to several different newsgroups all pertaining to HAM-RADIO
in General, I don't expect to see the same posting on each newsgroup. If there
were a few General Coverage Newsgroups I might expect it, but not on different
HAM-RADIO areas, like "space", or "digital", etc... I don't expect to see
DX Info in either of them. In actuality I would be annoyed by finding
DX news in a Ham-Digital newsgroup.

It's seems to me that it does cause an increase in what it costs to operate
my UUCP system, if someone is posting multipule copies of news to several
individual newsgroups which I subscribe to. And I am only on such operator.
I am sure there are hundreds, or thousands just like me all around the world.

> > Please explain why crossposting does not use more bandwidth. Inquiring minds
> > would like to know. 10k x 2 lists is 20k of data. How can that not be a

>
>
> Robert Smits There is *no* idiotproof filter.
> VE7EMD Idiots are proof against anything!
> Ladysmith B.C. - Richard Chycoski, VE7CVS
> e-mail: emd@ham.almanac.bc.ca

Ah, but it DOES take extra bandwidth to send them to my system from the
news-server. It takes my system extra time, and cost to download the
same FAQ, or whatever, over a UUCP connection. Storage? I can dump
the message once it's here, but I can't stop it on it's way if I don't
know its coming down the line.

I am just a small operator of a UUCP to TCP/IP Lan. So if you sent a 1mg
file to more than one newsgroup I subscribe to, you are seriously cutting
into my budget.

Seems to me that common sense would dictate that you would only forward
such material to one newsgroup, and store the FAQ at a well known
'anonymous' access site for folks to pick up at will.

Just my two cents worth after watching this message get larger, and longer.

I was wondering whether I can put a device that does the job of a dtmf squelch
to my portable icom 2gat which is not equiped with that feature built-in;

I don't care if the device is external or bulky;

It will be used to clear out ennoying repeater signals that comne
from other persons, I don't care to listen to...

ANY info will be appreciated !!!

please reply by personal email to:

Cecil: Compare a 1/4 wave ground plane to a 5/8 wave gp: both have
omnidirectional patterns but the 5/8 wave gives you a lower angle
of radiation, providing a certain `gain' over the 1/4 wave gp.

WWV wants omnidirectional coverage; there are antennas that would
give a lower take-off angle than a vertical dipole and still provide
this coverage. Right?

Jeff NH6IL

Ken, in a previous article, summed up what I wasn't not able to state. We certainly all agree that WWV's mission is to `reach out and touch everyone [tm]'. The example I keep falling back on is the VHF 1/4 wave vs. 5/8 wave gp - both have the same omnidirectional pattern (looking down from above) but the 5/8 `compresses' the radiation, thus resulting in `gain' over the 1/4 wave gp.

So why doesn't WWV use, say, stacked half-wave antennas? Are there physical limitations in doing this at HF?

Jeff NH6IL

NOTE: The Effective Sunspot Number for 09 APR 94 is not available.
The Full Kp Indices for 09 APR 94 are not available.
The 3-Hr Ap Indices for 09 APR 94 are not available.
Greater than 2 MeV Electron Fluence for 10 APR is: 2.2E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7700 (N10E46),
the sole spotted region on the disk, produced an occasional
subflare, none attaining class C.

Solar activity forecast: solar activity is expected to
persist at very low levels.

The geomagnetic field was at unsettled to major storm
levels. The greater than 2 MeV electron fluence was at very
high values over the period.

Geophysical activity forecast: the geomagnetic field is
expected to be at predominantly active conditions throughout
the interval. Episodes of minor to major storming may occur
during local nighttimes.

Event probabilities 11 apr-13 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 11 apr-13 apr

A. Middle Latitudes
Active 30/35/30
Minor Storm 30/25/25
Major-Severe Storm 15/10/10

B. High Latitudes
Active 30/40/40
Minor Storm 35/30/30
Major-Severe Storm 25/15/15

HF propagation conditions were below-normal over all
regions today. Middle latitudes showed some signs of weak
improvements, although nothing substantial has been observed
yet. High and polar latitude paths continued to see very poor
to occasionally useless propagation. Levels of geomagnetic and
auroral activity are beginning to wane gradually. This should
result in gradual improvements in HF propagation conditions
over the middle and low latitude regions over the next 24 to
48 hours. Higher latitude paths will also begin to see
improvements, but a return to near-normal conditions is not
expected until 14 or 15 April.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,

Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

The electronic publication of the Amateur Radio Newsline is distributed with the permission of Bill Pasternak, WA6ITF, President and Editor of Newsline. The text version is edited from the original scripts and transcribed from the audio reports by Dale Cary, WD0AKO, and is first published in The Radio & Electronics Round Table on the Genie Online System.

If you have any comment, suggestion, or news item you would like to submit, send them via E-Mail to 3241437@mcimail.com or B.PASTERNAK@genie.geis.com. You can contact Newsline at +1 805-296-7180. It is a combination answering and FAX machine, if you have a FAX to send, wait for the voice prompt and press your fax-send button.

All other information and disclaimers are in the text header below.

If you would like back issues of the Newsline transcripts you can get them by either of the following means.
Genie users can find them in the Radio & Electronics software library, M345;3. They are archived under the CBBS edition number, (NEWSLINE.ccc).

Internet users can FTP or Gopher them at the oak.oakland.edu library. They are archived in /pub/hamradio/docs/newsline/ as newsline.nnn, (the on the air edition number).

Please Note: The rec.radio.info newsgroup, as a whole, is no longer being archived at ftp.funet.fi. The bulk of what is there will soon be deleted. Except for a minimum of selected articles, NOT including amateur radio, the archive will continue on a limited basis. Lack of use and the large acumultion of disk space are the primary reasons for the drastic reduction.

Special thanks:

[869]

The following is a QST

Killer tornadoes sweep through the southeast and ham radio is there to provide communications in the wake of the devastation. Also, a California judge says the Part 97 rules give his court jurisdiction over ham radio on the air operations. He orders two more hams to stay off a repeater.

(*****
SOUTHEASTERN TORNADOS

Some chilling moments from the March 27th tornado outbreak that killed more than 40 people in the Southeastern U.S. Amateur radio operators helped the public by providing Skywarn and other emergency communications. Alabama was hardest hit by the storms. Some dramatic storm spotting and damage reports were captured on tape:

"This is N4KMJ, Jack in Goshen Valley at the Goshen Methodist Church. The roof has exploded. I see one house, the top all gone. Power lines down. Vehicles wrecked. I am approaching the church more now. N4KMJ, rescue squad is on scene."

That was one of the first reports coming from the Goshen Methodist Church near Piedmont, Alabama. That's where 21 people -- including six children -- died when a tornado slammed into the church during Palm Sunday services. Skywarn nets were active across more than half the state.

"This funnel cloud is definite I mean it is real formed right now. But I can't hear any roar but there is a lot of lightning goin' on, KC4KWX."

In some areas, tornadoes strike twice.

"The tornado has touched down in the Macedona area of Raglin. Second tornado, I repeat Macendona area of Raglin second touch down."
"Roger, Roger, I copy second touch down. Will advise National Weather N4YYQ."

Reports of large hail were common.

"We're experiencing hail at the present. Probably marble sized is what it would be considered and getting larger, comin' down pretty steady."

"We had golf ball sized hail at the bridge. I probably have several dents in the car."

Hams stayed at the National Weather Service near Birmingham for nearly 10 hours.

"W4CUE, NWS looking for severe weather reports only."

Palm Sunday 1994 has a new name in Alabama: Tornado Sunday.
It's a day residents in the South will never forget.
In Georgia the state's ARES net was activated Sunday
afternoon following reports of the tornadoes in Alabama.
Amateurs manned nets in 12 counties in the storm's expected path.
Local 2 meter net reports were funneled to the Georgia ARES net
on 3975 khz, with liaisons to both Alabama and South Carolina.
From there spotting reports were relayed to state Red Cross
Headquarters in Atlanta. Nearly a dozen repeaters were used for
emergency nets.

(*****
TORNADO HAM TRAGEDY

The tornadoes in Alabama also brought personal tragedy to Jack
Blair, N4KMJ. He's the ham who made the first report you just
heard in the story about damage to the Goshen Methodist Church.
As Jack moved closer to the church, he learned that his daughter
had been injured, and his wife was among those killed when the
building collapsed. We know you join with us in wishing Jack's
daughter a speedy recovery from her injuries and in offering
condolences to the Blair family on their tragic loss.

(*****
CAL STATE COURT DECLARES JURISDICTION OVER HAM RADIO

A California Superior Court judge says that state courts at
least state courts in California do have jurisdiction over the
on-air activities of ham radio operators. In taking this
position Judge Robert Hutson has also banned two hams from using
a private repeater.
Judge Hutson quoted chapter and verse from section 97.313,
subpart E of the FCC rules in making his decision. A decision
we reported last week to grant a petition from the Claremont
Amateur Repeater Association to issue a permanent restraining
order barring Anthony Cardenas, WA6IGJ, and Drew Feldman, N3KSO,
from operating on the clubs repeaters or taking part in any club
activity.
The latest revision of Section 97.113, subpart E of the
Amateur Radio rules and regulations states in part that any radio
amateur in his operations obey all federal, state and local laws.
It was only after talking to Sidney Radus, N6OMS, the attorney
for CLARA that the scope of the judge Hutson's decision became
evident.

"The argument that the other side was making was that only a
federal court had jurisdiction. That the federal government had
preempted all of these areas. What he found was that since
federal law applied, but state and local law also applied, then
there is no preemption and the states are free to act." Radus

Radus added that it was his view that this loophole in federal regulation applies only to the on the air operation of a radio amateur in cases where his or her operation may cause harm to other hams. He doubts that it could be construed as giving states and municipalities total control over Amateur Radio operations because this appears to be the only place in Part 97 where the FCC gives any authority to other jurisdictions. Most other experts in ham radio legal issues we have spoken with seem to agree with Radus.
The restraining orders against Cardenas and Feldman came just a bit more than a month after another Orange County Superior Court judge granted the clubs request for a similat order against Tim W. Seawolf, KJ5KE.
Its reported that Feldman has announced, on the air, that he will be filing an appeal.

(*****
LICENSE DOWNGRADES

This just in. Word that the FCC has mailed out between sixty and seventy letters to hams throughout California canceling license upgrades. This, in connection with the governments continuing probe into wide spread testing irregularities statewide. Most of the license downgrades are believed to be in Southern California and involve sessions run by a number of volunteer examiners that the government has temporarily had banned from the V.E. testing program. None of the names or call signs of those downgraded have been released by the FCC. All were given sixty dates to take a retest or face the loss of their higher license privileges. Word is that some of those who have lost their upgrades took their tests as far back as late 1991 and early 1992. That's all the information we have right now. More on the continuing California V.E. probe in future Newsline reports.

(*****
W5YI LICENSE RENEWAL SERVICE

W5YI Report publisher Fred Maia seems to have become embroiled in another controversy not really of his own making. This one involves a mailout of his company of a renewal reminder to hams who'se licenses are about to expire. For a fee of five dollars, Fred's company offers to handle the license renewal paperwork. This is not unlike companies that provide this kind of a support for land mobile radio, broadcast and other FCC licensees.
Fred told Newsline that he is providing the service at cost as a way to advertise. But some hams seem to view it in another light. Already there have been several messages appearing on the national packet radio network warning of what the origionaters call a license renewal scam. The text of one of these postings all but says that the W5YI license renewal service is illegal.

Another goes so far as to call it fraud. Others simply point out that any ham can get a form 610 from the FCC, fill it out, sign it and send it in at no cost other than postage.
Nor is the W5YI Group the only license renewal service operating. The American Radio Relay League has undertaken the same project, but only for its members only and with no fee involved. League members will receive a notice about 90 days before their license expiration date, along with an FCC Form 610 and an envelope addressed to the FCC.
In reality, the Leagues license renewal service is not free. You must be an ARRL member to use it and that membership costs thirty dollars a year. And there are also rumors that several V.E.C.'s and a number of ham radio database companies may get into the license expiration reminder and license renewal service as well. What charges will be made by these groups, if there are any, are unknown.
The bottom line is this. What Fred Maia and his W5YI group are doing is legal. License renewal services may be new to ham radio, but they have been around in other services for years. And as ham radio continues to grow at a rate of 6000 to 7000 new hams a month, there is a lucrative market developing for all kinds of products and services including license renewals. Look for more services like this one to spring up in the months and years to come.

(*****
FREE ARRL LETTER

Another ham radio newsletter price war may be on the horizon with word that the American Radio Relay League has decided to give away its ARRL Letter free of charge. But there is a catch. The catch is that you have to be an ARRL affiliated radio club to get the truly bargain rate.
The league says that it is limiting the free distribution of the ARRL Letter to the Editors of these club newsletters. Staffers at Headquarters have already mailed out the offer of a free one year subscription to qualifying newsletter editors. No word from W5YI Report publisher Fred Maia as to whether he plans to match the league's free offer. The Westlink Report ham newsletter has already said that it will not.

(*****
DAYTON SAREX

It's April and that means Spring in this part of the world. Time to get out and work on antennas, fix up the house and for thousands of hams... go to Dayton for the Hamvention.
For more than ten years, amateur radio operators have carried ham gear with them into space. They call the program SAREX, The Shuttle Amateur Radio EXperiment. More than a dozen flights have given thousands of students in schools all over the world the

thrill of experiencing space close up and personally by taking part in two way conversations between kids on campus and astronauts aboard Columbia... or Endeavour... or Discovery, 200 miles above the earth, spinning along at 17 thousand miles an hour.
Teachers say this highly visible exposure has generated so much enthusiasm that several hundred youngsters have gone on to get licensed and now are members of the amateur radio fraternity.
SAREX is sponsored by the ARRL, AMSAT and NASA and is controlled by an appointed board called The SAREX Working Group.
To celebrate its tenth anniversary, the Group accepted an invitation to stage a Forum at Dayton. Astronaut Tony England, W0ORE, who operated Slow Scan TV and voice back in 1985, will join Command Pilot Steve Nagel, N5RAW, who flew two SAREX missions in the nineties, to tell us what it's like from an astronauts' point of view.
The Working Group itself will make a rare appearance. Rosalie White, who heads the Educational Activities Department at ARRL headquarters and works with the schools that are chosen to take part in SAREX, will team up with Frank Bauer, the AMSAT Vice President or Manned Space Flight who sets up the ground stations and telebridges that bring the astronaut signals to the classrooms. Lou McFadin, the Principal Investigator from the Johnson Space Center will demonstrate the SAREX equipment. Roy Neal, K6DUE as Chairman will introduce the players and describe our proud history.
Several SAREX pioneers are flying in for the occasion. Bill Tynan, President of AMSAT; Doug Loughmiller, a former AMSAT President; John and Karen Nickel, who helped form the SAREX team; all plan to share their experiences.
Add several teachers and some students telling what it was like for them... plus questions and answers with the audience... and you have what promises to be a major highlight, Saturday afternoon at the Dayton Hamvention this year.
I'm Roy, K6DUE, for Newsline.

The SAREX forum will take place Saturday, April 30th at the 1994 Dayton Hamvention in Dayton Ohio. We'll see you there.

(*****
WESTLINK YOUNG HAM OF THE YEAR

A reminder from the Westlink Report ham radio newsletter that the nominating period for its annual Young Ham of the Year Award closes on Saturday April the 30th. The Westlink Report Young Ham of the Year award was conceived to honor the younger members of the Amateur Radio Community. Hams aged 18 and younger who have used Amateur Radio to significantly contribute to the benefit of the service, to their community or the nation are eligable.
With corporate underwriting from Yaesu USA, the 1994 winner will receive a trip to the Sea Pac convention, a piece of ham

radio equipment and a special plaque denoting his or her
accomplishments.
All nominations must be submitted on an official application
available for a self addressed stamped envelope to the Westlink
Report Young Ham of the Year, 28197 Robin Avenue, Saugus, CA
91350. The winner will be announced in early May.

(*****
Mc Gan Award

Nominations are solicited for the 3rd Annual Philip J. McGan
Memorial Silver Antenna Award for volunteer public relations
efforts on behalf of Amateur Radio. Nominees must be full ARRL
members in good standing and not be an officer, Director, Vice
Director, or paid ARRL staff member. Nominations are due by May
31, 1994, and must be made on official nominating forms, which
are available from ARRL HQ, 225 Main Street, Newington Ct. 06111.

(*****
BLANCHARD OBITUARY

Finally, last week, Newsline brought you the touching story of
Frank Blanchard, AA4LB, in Birmingham, Alabama. Frank received
a special honor in mid-March from fellow members of the
Birmingham Amateur Radio Club. He was named this year's
recipient of the Club's annual Citizenship Award. Due to a
critical illness, Frank received his plaque early, during a
special surprise visit to his hospital room. It was a very
emotional presentation and one that won't be forgotten. We're
saddened to tell you that on March 30th barely two weeks after
receiving his award, Frank lost his battle with cancer. Frank
Blanchard, appreciated for all the ways he found to help others,
was just 56 years old.

(*****

For this week, that's all from the Amateur Radio Newsline.

Jeffrey Herman (jherman@uhunix3.uhcc.Hawaii.Edu) wrote:

: WWV wants omnidirectional coverage; there are antennas that would
: give a lower take-off angle than a vertical dipole and still provide
: this coverage. Right? Jeff NH6IL

No! No! No! WWV does not want so low an angle of radiation that they cannot be heard in Nevada. Your discussion is assuming line-of-sight (ground wave) propagation. If you lower your angle of radiation on HF you will skip over a location that previously could hear you. Why can't I work Tucson from Phoenix on 10m? My ground wave is not strong enough to reach there and it's too short a distance for the first hop.

It seems to me that WWV would want the first hop to correspond to the fading out of the ground wave and want to be radiating a wide enough vertical angle that the end of the first hop corresponds to the beginning of the second hop, etc... for widest coverage.

Wherever the first skip hits on 10MHz WWV presently, if you lowered the angle of radiation by increasing the gain of the antenna, that location would lose WWV signal strength. The only way to increase WWV signal strength at all locations is by increasing transmitter power.

73, Cecil, kg7bk@indirect.com

But FM is ground wave and we are talking about WWV HF signals bouncing.
Doing *anything* to increase the signal strength in one location will
decrease the signal strength somewhere else at 10 MHz.

From: Kenneth.Guthrie@launchpad.unc.edu
Message-ID: <2oanmg$56d@samba.oit.unc.edu>
Source record: 268649

I recently bought a used Cushcraft R-7 vertical antenna and would like to get opinions on whether it is a good antenna or not. I would like to take my tri-band beam down and replace it with the R-7 if it is a good antenna. It still looks new. I would like to side mount it on my tower but the instruction pamphlet said not to mount near a tower, but was wondering if anyone had tried this?

Depending on the feedback I get, I will either use it or sell it.

Please E-mail if you have experience with this antenna.

Kenneth

It's not odd, but it does illustrate a common misunderstanding
regarding repeaters, which is that the signal strength your meter
reports is that of the repeater transmitter, not the transmitter on
the repeater input. You can't give someone a signal report based on
your meter, you can only give the repeater a signal report.

FM broadcast is not HF. You are correct. There isn't much advertising potential high up in the air. However, on HF, things are different.

You and Jeff are making the same mistake. You are both thinking in the DX frame of mind. If you take away the high angle radiation component of the single element antenna, you take away from those of us who rely on that high angle radiation to get a signal from them at relatively short distance. Again, it serves more to let it be broad. A low angle radiator will certainly do better on the long haul, but will decrease the signal closer in.

488. Help needed with Nissan interference

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-11 10:03:22 UTC
From: dtock@nyx.cs.du.edu
Message-ID: <1994Apr11.100322.10706@mnemosyne.cs.du.edu>
Source record: 268654

A friend recently bought a Nissan Sunny 1.4. He installed his radio and it worked fine. A bus then hit him (OK, his car, twice in fact) and now the car is back from the garage he has bad rx interference. This even happens on his HT within a few yards of the car. Tx is clean. The interference is only heard when there is a signal being received - it does not open the squelch itself. It is also (not surprisingly) across the band.

We have triedall sorts, but to no avail. Any suggestions as to the source and possible cures greatly appreciated.

Please reply by E-mail, and I will summarise. I suspect there could be a lot to be said in this subject.

Thanks

David

489. Best Mobile Antenna for Dual band (2m/70cm) rigs??

I've done some hamming in Germany, and I have a good bit of info regarding voice repeaters and packet nodes. I have not tried to operate 440 (which is between 430 & 440 MHz there -- not so easy with a 440 to 450 MHz US FM rig...), but I know that there are a lot more 70cm repeaters than 2m ones. The 2m systems are there are mostly wide-coverage machines, and near the big cities, you can work at least a couple of them. Out in the country, especially in the hills, forget it. An HT and a mag-mount antenna will be adequate most places.

You also need to know that most of the systems require a 1750Hz toneburst to access the repeaters. You can buy one, just like a CTCSS encoder, commercially from Comm. Specialists for about $25. Or you can practice whistling at the right frequency -- a lot of people do that too.

Be sure to file for a temporary license before you go. The DARC seems to respond pretty quickly to applications (a couple of weeks recently), but there's no guarantee that they will.

I have some German repeater maps (old, but mostly still correct) and packet node lists, if anyone needs them.

>`gain' over the 1/4 wave gp.

This gain in the vertical (elevation) plane would concentrate the
radiated energy at lower angles which, when it is reflected by the
ionosphere, would cause it to strike the earth outside the continental
US on the higher frequencies. For close-in coverage, one would want
high-angle radiation and short skip distances. High angle radiation
means no gain in the vertical (elevation) plane.

Actually, a 5/8-wavelength monopole has relatively little gain over
a 1/4-wave one. They could probably use one and still have enough
radiation at high angles to cover the U.S. But a vertical array of
20 dipoles fed in-phase would be out of the question. It would
put a great signal into Europe, but would miss the US entirely.

>So why doesn't WWV use, say, stacked half-wave antennas? Are there
>physical limitations in doing this at HF?

If memory serves me, they actually do get that effect. Each of their
transmitting antennas is surrounded by an extensive ground screen.
This reflects the radiation and produces the same effect as an 'image'
dipole fed in phase, yielding about 3 dB of gain over a free-space
antenna.

Good point! It shall be done for v0.11 of the database. Any good
ideas such as this is encouraged and will be incorporated. Any other
good ideas for version 0.4 of the file format? Remember to shoot for
the sky since it is far easier to make changes now than when this
project gains too much momentum (even accounting for the fact that I
have reserved a large number of fields for future use).

For some reason, the directories' committee on file format standards
is quite open to my suggestions :)

>WWV wants omnidirectional coverage; there are antennas that would
>give a lower take-off angle than a vertical dipole and still provide
>this coverage. Right?

WWV wants coverage to as much of the US as possible. Lowering the
takeoff angle will widen the skip zones where WWV will not be heard.
Low angle only radiation is not what's wanted for maximum coverage.
What's wanted is radiation at all takeoff angles that will support
refraction back to Earth. That minimizes the size of the skip zones.
That's why they use a vertical dipole pattern. Low angle radiation is
only useful for DXing. WWV is not in the DX game.

I've been taking an HT along on some mountain bike trips in NE PA. I haven't actually tried to ATB ride and operate though, except some simplex stuff once on smooth back roads in the NJ pine barrens. Maybe when I get a speaker mike I'll give it a try. Should be able to clip it to your helmet chin strap. Ever consider mounting a longer rubber duck on a Blackburn aluminum rear MTB rack? Might be a pretty good ground, at least for UHF. Maybe you could even shock mount the HT on the rack. These racks are very strong, and would provide good impact protection if the radio was centrally mounted. A small

sealed 12V gel cell pack on the rack would be nice too! I thought about handlebar mounting. I wouldn't want anything there for some of the endos I take.

mmjjmm@post.its.mcw.edu

For both bicycle and motorcycle use I try to arrange it so that all the gear is connected to me, with the possible exception of the antenna (and there I prefer some kind of quick disconnect that will pull free in a get off) That way I don't have lots of tangles between me and the bike, and the gear travels with me when I get off for whatever reason.

Mostly I use an HT clipped someplace handy on the jacket or whatnot - the best arrangement has been a big pocket on the front of my jacket, or with a strap that places it above my shirt pocket area. On the bicycle I more often have it on my belt toward the back since I don't sit as upright as on the motocycle.

I prefer to use a headset when bicycling, and a modified intercom headset when motorcycling. Either plugs directing into a modified HS51 vox/ptt/tot box that I use in touch on touch off mode (PTT ties up the hands too much, vox is too unreliable - especially when spontaneously 'advising' cage drivers on their habits and geneology :-)

On the bicycle I've used a hypodermic halfwave built into a piece of pvc pipe hose clamped to the uprights on my rear rack. Rather than folding back the shield of the coax, I took some copper foil tape and wrapped that around the outside of the coax for the 1/4 wave going back down the coax and soldered it to the shield. Sliding it inside the pvc changed the tuning somewhat and it had to be trimmed down.

It's a real joy to go motocycling with a bunch of like minded hams and chat all afternoon as we wend our way amoung the Fingerlakes, occasionally hilltopping back to the home repeater to check in with the families. On the bicycle, it just adds a nice dimension to be able to listen in as you crank away the miles, even if you don't have enough air to join in on those steep hills (I can't do *anything* else when I'm trying to go up Buffalo St, Jeff :-).

>I have been reading up on doppler RDF's. The Amateur Radio Handbook
>has an article that says they can only do well to about 5 degrees.
>Have you heard of systems or ways to do it that gives better results?

Doppler systems theoretically can give better results than that, but the practical limitations of precision antenna arrays, the switching speed, precision reconstruction filters, and the radio's response all conspire to reduce practical accuracy to around 5 degrees.

For best accuracy, you need to:

1) Space the antennas as precisely as possible in a square. For 5 degree accuracy, spacing errors must be less than 1.3%, or about 0.24 inch at 2 meters. One degree accuracy would require array errors be held below 0.053 inch at 2 meters.

2) The higher the switching speed, the greater the doppler, and the easier small angle changes are to measure. So you want to use as high a switching rate as you can manage. This also relates to 3 and 4 below.

3) The reconstruction filter must accurately smooth the discrete antenna switch samples to a sinusnoid so that the precise point of negative going zero crossing can be determined. A 4 pole antenna array only gives 4 sample points to define the waveform. Theoretically that's enough, but it's easier with an 8 or 16 antenna array.

4) The wider and flatter the phase bandwidth of the radio, the more precisely it will pass the doppler shift information on to the resolver.

This latter is a problem when using typical ham receivers, so switch speeds are typically held down to 2 kHz or less for a 4 pole array. This corresponds to a rotational rate of 500 rps. A cumulative error of 0.27% in the array, in the receiver passband phase response, in the reconstruction filter phase accuracy, and in the resolver will allow a 1 degree readout accuracy. That's tough to accomplish in practice.

I would like to about designing low cost band limited (10k-100k herz) 50 Ohm Coaxial transistor repeaters.

> PGP2.3 key at key servers or upon request

I have had thoughts of doing sim this summer. I was given a 12 volt camcorder battery that somebody found, 12v @ 2 ah. Better than any ht battery I have seen. Nearly as big as ht though. {:-) strap it to the handlebars or backpack it, and who cares how much it weighs. Mobile 5/8 sounds interesting. How about a modified bike headlight generator to recharge battery? Use a led on handlebars to indicate when voltage is ok to charge batts, would keep my speed up.

I don't like idea of attaching ht directly to bike, too much vibration. I saw a guy wear one around his chest, sim to a camera strap around neck & 1 arm, with suspender type strap to his belt to keep radio from sliding. I like that.

Headset Idea I like, perhaps some kind of pull/release connectors for antenna like the power & mic/headset connectors, instead of the bnc if you are using an external antenna. Crash & phone plugs pop out easily, bnc will rip plug from either radio or cable. Duck on cable or some type of on body antenna is what I am planning to use this spring. - (1/4 wave ground plane on top of helmet - you would be a sight for motorists!) I saw a guy at hamfest with a single headphone, boom mike with a uhf 220/440? 4" duck attached to it.

Experiment, try different stuff, modify something, invent something nifty & share it with us. After all, isnt this one of the basic elements of ham?

E--{:-)

From: hlb@li.loral.com
Message-ID: <hlb.766078562@loral>
Source record: 268668

We will be taking a trip to Monterey sometime so I'm looking for
info on open 2m repeaters in that area. We will also be in Solvang so
info for that area would also be appreciated.

Thank you,
Howard
hlb@li.loral.com

SB NEWS @ AMSAT $SPC0411
* SpaceNews 11-Apr-94 *

BID: $SPC0411

=========
SpaceNews
=========

MONDAY APRIL 11, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* NEW AO-13 SCHEDULE *
======================
Magnetorquing from attitude 180/0 to 230/-5 commenced on Apr 04 [Fri] 1810 UTC, orbit 4446/224, and continued for 8 perigees. The new schedule commenced on orbit 4452 MA 145 Apr 07 [Thu] 1120 UTC.

*** AO-13 TRANSPONDER SCHEDULE *** 1994 Apr 07-Jul 11
Mode-B : MA 0 to MA 170 |
Mode-BS : MA 170 to MA 218 |
Mode-S : MA 218 to MA 220 |<- S beacon only
Mode-S : MA 220 to MA 230 |<- S transponder; B trsp. is OFF
Mode-BS : MA 230 to MA 250 | Alon/Alat 230/-5
Mode-B : MA 250 to MA 256 |
Omnis : MA 250 to MA 120 | Move to attitude 180/0, Jul 11

NEW ATTITUDE - Note: The mean attitude for the period 1994 Apr 07-Jul 11 will be ALON/ALAT 230/0. This is an Alon 10 degrees "better" than originally proposed. It is achieved at the expense of a 10 degree "worse" Sun angle, which will will now reach 40 degrees (77% illumination) May 30-Jul 11. During that period the Mode-B transponder *might* have to be OFF from MA 250-80 to conserve battery power.

Please don't rely on gossip and rumour! Continuous up to date information about AO-13 operations is always available on the beacons, 145.812 MHz or 2400.664 MHz in CW, RTTY and 400 bps PSK. These bulletins are also posted to Internet, ANS, Packet, PacSats etc, and many international newsletters. A 400 bps PSK decoder is available from G3RUH and several DSP products; display software P3C.EXE etc from many AMSAT groups.

The active command stations are listed below, and constructive feedback about operations is always welcome.

Peter DB2OS @ DB0FAU.#NDS.DEU.EU
James G3RUH @ GB7DDX.#22.GBR.EU
Graham VK5AGR @ VK5WI.#ADL.#SA.AUS.OC

The above may also be reached via Internet (callsign@amsat.org) and KO-23.
Please remember to state clearly a return address.

Notes prepared on behalf of, and in total cooperation with the above by:

James Miller G3RUH @ GB7DDX.#22.GBR.EU 1994 Apr 04 [Mon] 0600 UTC

* AMSAT NET VIA SATELLITE *
==========
Bruce Paige, KB5ZRV, is the AMSAT Area Coordinator in Houston, Texas. Bruce runs a local AMSAT net that meets on the 147.100 MHz repeater every Tuesday evening at 10:00 PM local Central Time. The net is rebroadcast over the Galaxy 3 satellite, Transponder 17 on a 5.8 MHz subcarrier.

This net is then received live and retransmitted by repeater operators in Toronto, Canada, Anchorage, Alaska (3 repeaters), New England States (6 repeaters), Ontario, CA, Lawton, OK, Indianapolis, IN, Fargo, ND. It has also been heard in Hawaii and other states.

The net has a telephone number for those that would like to ask questions of the net or check in. There are beginners segments that lasts 3-5 minutes, and explain how satellite novices can work various satellites, describes different types of station equipment necessary to work satellites, and other topics that beginners find useful in getting started in satellite operations. SAREX operating techniques have also been covered.

This net re-broadcast is free for the taking by those with TVRO ground stations. The people who run the net are having a great time and have found many people are listening in that do not have AMSAT nets in their local areas.

Any comments can be directed to Bruce via the Internet at kb5zrv@amsat.org.

* FO-20 SCHEDULE *
==========
The FO-20 command station announced that FO-20 will be placed in Mode JA (Analog transponder mode) during Field Day 1994 (25-Jun-94 18:00 UTC through 26-Jun-94 18:00 UTC).

The current operating schedule is as follows:

Analog mode:
06-Apr-94 06:45 -to- 13-Apr-94 07:10 UTC
20-Apr-94 07:35 -to- 27-Apr-94 07:55 UTC
11-May-94 06:54 -to- 18-May-94 07:20 UTC

Digital mode:
Unless otherwise noted above.

[Info via Kazu Sakamoto, JJ1WTK]

* FUJI AWARD INFORMATION *
==========

Kazu Sakamoto, JJ1WTK, reports that a "Fuji" award is available to users of the FO-20 satellite. Applicants should have confirmed CW or SSB contacts with 10 different amateur stations through the FO-20 Amateur Satellite. A fee of 8 IRCs or US $4 will be charged per award. An additional 2 IRCs will be charged for air mail delivery regardless of the number of the awards claimed. If QSL cards are submitted, sufficient funds for return postage will also be required.

Correspondence should be sent to:
Japan Amateur Radio League -- Award Desk
1-14-2 Sugamo, Toshima, Tokyo 170, Japan

* SpaceNews BBS UPDATE *
==========

The SpaceNews packet radio BBS sponsored by Mario, KD6ILO, reported in last week's issue of SpaceNews has changed frequency. It can now be found operating on 145.050 MHz. The latest issue of SpaceNews, as well as other AMSAT and satellite-related news and information can be found on this BBS. The BBS is also linked to the UoSAT-OSCAR-22 satellite through the N7RSN SatGate also located in Tacoma, WA.

Yeah:

(1) Gain in the azimuth plane.
(2) Gain in the elevation plane.

>WWVH uses what is known
>as a broadside or endfire (can't remember which it was
>from the description) array of vertical dipoles to create
>a pattern, which when viewed from above, appears to
>concentrate its power to the west.

From the description Jeff published, it sounded like a
two-element, end-fire array.

>However, there is another way to concentrate power, which
>is what most FM broadcast stations do. If you look at
>a single dipole vertically oriented, you will see that it
>has a omni pattern viewed from above. Fine. If you
>now view it from the ground, a lot of power goes up into the air,
>some of it at nearly 90 degrees to the ground. (An ideal
>dipole has a null at 90 deg.)

If you look closely at the elevation patterns of a vertical dipole,
you will find that there isn't that much power above 45 degrees.

>Now, recall what you learned
>about HF propogation. Power that is sent nearly straight
>up has a much lower chance of skipping (being refracted) than
>one with a low angle of incidence.

That depends on the frequency and condition of the ionosphere.
Below a certain frequency, called the critical frequency, a
signal at vertical incidence to the ionosphere is reflected.
That frequency typically ranges from 2 to 10 MHz.

>Thus, that power is most likely
>being wasted. A stacked dipole of proper phasing (two dipoles
>on top of another) can use constructive interference to put more
>power closer to the horizon rather than up in the air.

>This puts more power into the low angles of incidence which are

>to earth.

The question I have for you is: Reflected back to where on the
earth???

> Note, however, that the omni pattern as viewed
>from above is NOT disturbed. This is how one gets "omni"
>gain. FM broadcasters do this to put as much power as
>possible into the horizon. Not much advertising potential high
>up in the air.....

This is true for VHF space wave propagation on the earth's surface.
It is not necessarily true for sky wave propagation at HF.

WWV near Fort Collins appears to have horizontal dipoles for antennas.
They're about 100-200 feet off the ground, but they do look horizontal.

[869]

The following is a QST

Killer tornadoes sweep through the southeast and ham radio is there to provide communications in the wake of the devastation. Also, a California judge says the Part 97 rules give his court jurisdiction over ham radio on the air operations. He orders two more hams to stay off a repeater.

(*****
SOUTHEASTERN TORNADOS

Some chilling moments from the March 27th tornado outbreak that killed more than 40 people in the Southeastern U.S. Amateur radio operators helped the public by providing Skywarn and other emergency communications. Alabama was hardest hit by the storms. Some dramatic storm spotting and damage reports were captured on tape:

"This is N4KMJ, Jack in Goshen Valley at the Goshen Methodist Church. The roof has exploded. I see one house, the top all gone. Power lines down. Vehicles wrecked. I am approaching the church more now. N4KMJ, rescue squad is on scene."

That was one of the first reports coming from the Goshen Methodist Church near Piedmont, Alabama. That's where 21 people -- including six children -- died when a tornado slammed into the church during Palm Sunday services. Skywarn nets were active across more than half the state.

"This funnel cloud is definite I mean it is real formed right now. But I can't hear any roar but there is a lot of lightning goin' on, KC4KWX."

In some areas, tornadoes strike twice.

"The tornado has touched down in the Macedona area of Raglin. Second tornado, I repeat Macendona area of Raglin second touch down."
"Roger, Roger, I copy second touch down. Will advise National Weather N4YYQ."

Reports of large hail were common.

"We're experiencing hail at the present. Probably marble sized is what it would be considered and getting larger, comin' down pretty steady."

"We had golf ball sized hail at the bridge. I probably have several dents in the car."

Hams stayed at the National Weather Service near Birmingham for nearly 10 hours.

"W4CUE, NWS looking for severe weather reports only."

Palm Sunday 1994 has a new name in Alabama: Tornado Sunday.
It's a day residents in the South will never forget.
In Georgia the state's ARES net was activated Sunday
afternoon following reports of the tornadoes in Alabama.
Amateurs manned nets in 12 counties in the storm's expected path.
Local 2 meter net reports were funneled to the Georgia ARES net
on 3975 khz, with liaisons to both Alabama and South Carolina.
From there spotting reports were relayed to state Red Cross
Headquarters in Atlanta. Nearly a dozen repeaters were used for
emergency nets.

(*****
TORNADO HAM TRAGEDY

The tornadoes in Alabama also brought personal tragedy to Jack
Blair, N4KMJ. He's the ham who made the first report you just
heard in the story about damage to the Goshen Methodist Church.
As Jack moved closer to the church, he learned that his daughter
had been injured, and his wife was among those killed when the
building collapsed. We know you join with us in wishing Jack's
daughter a speedy recovery from her injuries and in offering
condolences to the Blair family on their tragic loss.

(*****
CAL STATE COURT DECLARES JURISDICTION OVER HAM RADIO

A California Superior Court judge says that state courts at
least state courts in California do have jurisdiction over the
on-air activities of ham radio operators. In taking this
position Judge Robert Hutson has also banned two hams from using
a private repeater.
Judge Hutson quoted chapter and verse from section 97.313,
subpart E of the FCC rules in making his decision. A decision
we reported last week to grant a petition from the Claremont
Amateur Repeater Association to issue a permanent restraining
order barring Anthony Cardenas, WA6IGJ, and Drew Feldman, N3KSO,
from operating on the clubs repeaters or taking part in any club
activity.
The latest revision of Section 97.113, subpart E of the
Amateur Radio rules and regulations states in part that any radio
amateur in his operations obey all federal, state and local laws.
It was only after talking to Sidney Radus, N6OMS, the attorney
for CLARA that the scope of the judge Hutson's decision became
evident.

"The argument that the other side was making was that only a
federal court had jurisdiction. That the federal government had
preempted all of these areas. What he found was that since
federal law applied, but state and local law also applied, then
there is no preemption and the states are free to act." Radus

Radus added that it was his view that this loophole in federal regulation applies only to the on the air operation of a radio amateur in cases where his or her operation may cause harm to other hams. He doubts that it could be construed as giving states and municipalities total control over Amateur Radio operations because this appears to be the only place in Part 97 where the FCC gives any authority to other jurisdictions. Most other experts in ham radio legal issues we have spoken with seem to agree with Radus.
The restraining orders against Cardenas and Feldman came just a bit more than a month after another Orange County Superior Court judge granted the clubs request for a similat order against Tim W. Seawolf, KJ5KE.
Its reported that Feldman has announced, on the air, that he will be filing an appeal.

(*****
LICENSE DOWNGRADES

This just in. Word that the FCC has mailed out between sixty and seventy letters to hams throughout California canceling license upgrades. This, in connection with the governments continuing probe into wide spread testing irregularities statewide. Most of the license downgrades are believed to be in Southern California and involve sessions run by a number of volunteer examiners that the government has temporarily had banned from the V.E. testing program. None of the names or call signs of those downgraded have been released by the FCC. All were given sixty dates to take a retest or face the loss of their higher license privileges. Word is that some of those who have lost their upgrades took their tests as far back as late 1991 and early 1992. That's all the information we have right now. More on the continuing California V.E. probe in future Newsline reports.

W5YI LICENSE RENEWAL SERVICE

W5YI Report publisher Fred Maia seems to have become embroiled in another controversy not really of his own making. This one involves a mailout of his company of a renewal reminder to hams who'se licenses are about to expire. For a fee of five dollars, Fred's company offers to handle the license renewal paperwork. This is not unlike companies that provide this kind of a support for land mobile radio, broadcast and other FCC licensees.
Fred told Newsline that he is providing the service at cost as a way to advertise. But some hams seem to view it in another light. Already there have been several messages appearing on the national packet radio network warning of what the origionaters call a license renewal scam. The text of one of these postings all but says that the W5YI license renewal service is illegal.

Another goes so far as to call it fraud. Others simply point out that any ham can get a form 610 from the FCC, fill it out, sign it and send it in at no cost other than postage.
Nor is the W5YI Group the only license renewal service operating. The American Radio Relay League has undertaken the same project, but only for its members only and with no fee involved. League members will receive a notice about 90 days before their license expiration date, along with an FCC Form 610 and an envelope addressed to the FCC.
In reality, the Leagues license renewal service is not free. You must be an ARRL member to use it and that membership costs thirty dollars a year. And there are also rumors that several V.E.C.'s and a number of ham radio database companies may get into the license expiration reminder and license renewal service as well. What charges will be made by these groups, if there are any, are unknown.
The bottom line is this. What Fred Maia and his W5YI group are doing is legal. License renewal services may be new to ham radio, but they have been around in other services for years. And as ham radio continues to grow at a rate of 6000 to 7000 new hams a month, there is a lucrative market developing for all kinds of products and services including license renewals. Look for more services like this one to spring up in the months and years to come.

(*****
FREE ARRL LETTER

Another ham radio newsletter price war may be on the horizon with word that the American Radio Relay League has decided to give away its ARRL Letter free of charge. But there is a catch. The catch is that you have to be an ARRL affiliated radio club to get the truly bargain rate.
The league says that it is limiting the free distribution of the ARRL Letter to the Editors of these club newsletters. Staffers at Headquarters have already mailed out the offer of a free one year subscription to qualifying newsletter editors. No word from W5YI Report publisher Fred Maia as to whether he plans to match the league's free offer. The Westlink Report ham newsletter has already said that it will not.

DAYTON SAREX

It's April and that means Spring in this part of the world. Time to get out and work on antennas, fix up the house and for thousands of hams... go to Dayton for the Hamvention.
For more than ten years, amateur radio operators have carried ham gear with them into space. They call the program SAREX, The Shuttle Amateur Radio EXperiment. More than a dozen flights have given thousands of students in schools all over the world the

thrill of experiencing space close up and personally by taking part in two way conversations between kids on campus and astronauts aboard Columbia... or Endeavour... or Discovery, 200 miles above the earth, spinning along at 17 thousand miles an hour.
Teachers say this highly visible exposure has generated so much enthusiasm that several hundred youngsters have gone on to get licensed and now are members of the amateur radio fraternity.
SAREX is sponsored by the ARRL, AMSAT and NASA and is controlled by an appointed board called The SAREX Working Group.
To celebrate its tenth anniversary, the Group accepted an invitation to stage a Forum at Dayton. Astronaut Tony England, W0ORE, who operated Slow Scan TV and voice back in 1985, will join Command Pilot Steve Nagel, N5RAW, who flew two SAREX missions in the nineties, to tell us what it's like from an astronauts' point of view.
The Working Group itself will make a rare appearance. Rosalie White, who heads the Educational Activities Department at ARRL headquarters and works with the schools that are chosen to take part in SAREX, will team up with Frank Bauer, the AMSAT Vice President or Manned Space Flight who sets up the ground stations and telebridges that bring the astronaut signals to the classrooms. Lou McFadin, the Principal Investigator from the Johnson Space Center will demonstrate the SAREX equipment. Roy Neal, K6DUE as Chairman will introduce the players and describe our proud history.
Several SAREX pioneers are flying in for the occasion. Bill Tynan, President of AMSAT; Doug Loughmiller, a former AMSAT President; John and Karen Nickel, who helped form the SAREX team; all plan to share their experiences.
Add several teachers and some students telling what it was like for them... plus questions and answers with the audience... and you have what promises to be a major highlight, Saturday afternoon at the Dayton Hamvention this year.
I'm Roy, K6DUE, for Newsline.

The SAREX forum will take place Saturday, April 30th at the 1994 Dayton Hamvention in Dayton Ohio. We'll see you there.

WESTLINK YOUNG HAM OF THE YEAR

A reminder from the Westlink Report ham radio newsletter that the nominating period for its annual Young Ham of the Year Award closes on Saturday April the 30th. The Westlink Report Young Ham of the Year award was conceived to honor the younger members of the Amateur Radio Community. Hams aged 18 and younger who have used Amateur Radio to significantly contribute to the benefit of the service, to their community or the nation are eligable.
With corporate underwriting from Yaesu USA, the 1994 winner will receive a trip to the Sea Pac convention, a piece of ham

radio equipment and a special plaque denoting his or her
accomplishments.
All nominations must be submitted on an official application
available for a self addressed stamped envelope to the Westlink
Report Young Ham of the Year, 28197 Robin Avenue, Saugus, CA
91350. The winner will be announced in early May.

(*****
Mc Gan Award

Nominations are solicited for the 3rd Annual Philip J. McGan
Memorial Silver Antenna Award for volunteer public relations
efforts on behalf of Amateur Radio. Nominees must be full ARRL
members in good standing and not be an officer, Director, Vice
Director, or paid ARRL staff member. Nominations are due by May
31, 1994, and must be made on official nominating forms, which
are available from ARRL HQ, 225 Main Street, Newington Ct. 06111.

BLANCHARD OBITUARY

Finally, last week, Newsline brought you the touching story of
Frank Blanchard, AA4LB, in Birmingham, Alabama. Frank received
a special honor in mid-March from fellow members of the
Birmingham Amateur Radio Club. He was named this year's
recipient of the Club's annual Citizenship Award. Due to a
critical illness, Frank received his plaque early, during a
special surprise visit to his hospital room. It was a very
emotional presentation and one that won't be forgotten. We're
saddened to tell you that on March 30th barely two weeks after
receiving his award, Frank lost his battle with cancer. Frank
Blanchard, appreciated for all the ways he found to help others,
was just 56 years old.

Marc Richard Wollemborg <mrw13@namaste.cc.columbia.edu> writes:

>Has anybody tried both of the above radios and could tell me which of the two
>I should choose? I hear the Kenwood is nice and small, has a great display,

Marc,
Both of these radios is nice and has very useable features.
Any dual-bander will experience some intermod and adjacent channel
interference, especially ones that cover extended spectrum like
the TH78. I have a 78 and my dad has a 530, so i have been able to
compare them side by side. I think that both get hammered by
RF ("intermod"...) equally, and both get good/excellent audio and
signal reports. Each manages power well, and the 530 does a
higher-tech job by controlling power use diuring rx/tx... i mean
transcieve. The thing that i do not like babout the 530 is
that the VFO setup is not flexible. You can only transmit @M
2 meter on the left and 44 on the right. You can program 2M on the
440 side and VV, but not transmit from them...
The 78 gives you the ability to reacall and use any memory
frequency on either side. Eaach VFO will transcieve on both bansds
and they work equally well. You only have to program each frequency (with all
associated info, tomne, etc...) once, and you can recall it from
either VFO.

This may seem picky, but i think that it is a big difference. Either
rig will get you on both bands in good style, but those Yaesu
ads only tell you part of the differences.

Oh yeah, the 530 does do PL scan, but the repeater has to be
pretty clear, very active during the scan, and pass the PL
tone through to the output, and not all do.

Good Luck.

Pete, N1QDQ

On linked systems, it takes a while (as much a half a second per link) for a carrier on one input to bring up the relay. With a short call like "WT9T," it is _easy_ to lose your entire ID in the time it takes to bring up the link. Personally, I follow the rule key the mike, inhale, then ID; but I don't begrudge the operators who fill the keyup time with noise words.

Calling an extra half-second at the start of a transmission "inefficient," especially when the half-second is needed to make the transmission heard at all, is silly. What were you hoping to do -- accumulate those half-seconds into
a two-week vacation?

The partial-call system advocated in another post would not work in the VHF nets I regularly check into. Net control calls for a suffix range; checkins call in; the net control waits until the call rate goes down, and then reads back the calls he heard. That cycle is repeated until it yields no further call signs, and then is repeated for the next suffix range. In that system, the only transmission most net members make is the single call at checkin; it had better contain a full ID.

Yes, that's the specification and requirement for you to participate in
Usenet. If your software doesn't follow the specifications for
participating in the Usenet news network, you have essentially three
choices:

1) you can fix your software
2) you can stop participating
3) you can live with the problems

Okay, first, I didn't do the riding (my wife, Dawn-KI5EV, and son Ryan-N5SVU are the long distance riders); second, your milage may vary :-)

For two years running when we were back in TX my wife and son rode the MS-150 (100 miles day 1, 76 day 2, from Houston to Austin). For the event and (of course) for the practice sessions leading up to it, we wanted to have good comm from them bicycle mobile to me (home, car, or playground with the younger two kiddos). So . . .

Equipment: (besides the bike :-)

-handlebar bag; zipper main compartments, elastic mesh side pockets, clear vinyl top flap (for map), velcro straps for easy on/off and metal top (wire) frame to hold it up and rigid on the bike. Models from any bike shop.
-DJ-580 from Alinco, because it was rugged, small, light, has features for power conservation, dual-band flexability, and it was the right price. The 580 fits snugly into an outer pocket of the bag. With a little fiddling around you can find a place where you can see the display (if you really need to). The combination of the bag, the wire frame, and the handlebars will protect the radio in case of a fall (I'm more worried about the rider:-)
-Thinline 50 ohm mini-coax with BNC connectors. One end goes to DJ-580 and (obvious?) other to bottom of antenna. I used nylon cable tiewraps to hold the cable to the top tube of the bikes (and out of the way of everything else, like the spare brake and shifter cables we ran in tandem to the "real" cables: makes for an easy road-fix).
-Antennas. Most used was a simple 1/4 GP that I made using the back luggage rack as the ground plane. My wife found it a little annoying when getting on and off the bike, and it prevented her from putting _everything_ she wanted on the rack (but most folks don't seem to run racks at all, so...). Tried a simple wire jpole on a bike flag (was going to make it "nicer" later). Worked like a champ, but was a _lot_ more annoying when getting on/off: wife and son nixed the idea on aesthetics (nobody else on MS-150 would _dream_ of riding with bicycle flags!). Sometimes they would just use the rubber duck on the h/t (or the ANLI dual-bander: much better). _I_ preferred them to use the 1/4: I could hear them much better over that hilly route. The 19 inch is not all that conspicuous, but works pretty well.
-Microphones. My wife ended up with the Alinco earbud with small VOX mic. It also has a PTT mode which my wife switched to pretty often as she didn't want everybody hearing her panting all the time :-) My son switched around between a single-side headphone with boom mic (PTT) and a label-clip PTT speaker-mic (he really wanted one like my wife's, but money got tight). The headset/boom mic definately worked better than the speaker-mic and is still the setup I use in casual bicycle riding. The earbud setup my wife like is a good one. We've not had the opportunity to try earmics.
-Power. Besides the regular battery packs, they used shell packs for regular

alcalines and RC car battery packs. The RC packs slipped into another mesh pocket on the handlebar bag (or into shorts pockets when walking around) and were wired for the external dc-in jack. They worked great and we got a deal on buying them that made them _much_ cheaper than regular packs.
-Frequencies. Since I was doing comm support, we had the net freqs programmed into the radios (and my wife had the opportunity to call in some downed bikers before the roving vehicles got there). We had a simplex freq for bike-to-bike and bike-to-me comm. At times, we got other riders involved which made the ride nicer for all concerned.

Vibration was not a problem with the handllebar bags. We had paid to have an aluminum h/t holder made for the bike, but it looked like it would be more trouble than it was worth--never used it. I still feel like the jpole bike flag would be a good option if you didn't mind the obvious bicycle-nerd look (no-flames please, I'm quoting). The earbud as opposed to the headset is more comfortable. In either case, wires must be long enough to reach easily to be connected to the h/t and allow complete freedom of movement without dangling down in the way while riding over the handlebars.

Our objective was good comm without getting in the way of the bicycle ride. The prime goal was the MS-150 after all. We felt like we succeeded and we would duplicate the setup if we ever get around to trying the GA 150.

Cheers, 73, and good luck going bike-mobile!

gilbaronw0mn@delphi.com (Gilbert Baron) writes:

>Please explain why crossposting does not use more bandwidth. Inquiring minds
>would like to know. 10k x 2 lists is 20k of data.

Because the article is but one, with a reference to all the other groups
that may have interest in it. 10k x 1 newsgroup with 3 other newsgroups
referenced is still just 10k of bandwidth (but perhaps 40k or 4 repeats of
the article presented to the newsreader bandwidth if your newsreader is borken
and has no concept of cross-posting, even the first newsreader packaged with B
news didn't have this bug. A newsreader typically can be configured to present
this one article in the first group in the list, or in the first group you
read that has this article cross-posted in the list).

The Newsgroups line on the *one* article is:
Newsgroups: rec.radio.amateur.misc,rec.radio.info,news.answers,rec.answers

>>The exception is when someone has a feed that gets one of the groups and
>>not the other. Then I agree, he might have a valid point if he says
>>that it is a waste of bandwidth _on that link_.
>
>Huhhhhhhhhh if it gets only one then you have less data going across. It
>jsut does not make sense to me.

Not a problem, but what he means is that the article will be fed as *one*
article if any *one* of the newsgroups is in your feed list. If the idea is
to eliminate the article from the feed, then one would put in:
...,!rec.radio.info,rec.radio.amateur.misc,...
which would remove all rec.radio.info articles, *including* the one cross
posted to rec.radio.amateur.misc.

Do not confuse cross-posting with multiple posting, multiple posting being
the most evil act a USENET user can perform, the antichrist of USENET so
to speak ... :-)

Ciao, 73 de VE6MGS/Mark -sk-
You owe the Oracle a full feed.

518. ARRL rpt on preferred calls

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-11 18:41:55 UTC
From: mtracy@arrl.org
Message-ID: <1994Apr11.184155.11586@arrl.org>
Source record: 268584

Posted April 11, 1994

This file contains the Final Report of the ARRL Ad-Hoc Committee
on Preferred Callsigns

Committee Members:
Mr. Steve Mendelsohn, WA2DHF, Chairman
Mr. Frank Butler, W4RH
Mr. Tom Comstock, N5TC
Mr. John Kanode, N4MM
Mr. Brad Wyatt, K6WR

Executive Summary

The Committee was created by President Wilson to recommend a
response to the Board in P.R. Docket 93-305, the Vanity Callsign
proposal. The charter from President Wilson included a request
that member input be sought in the limited time before the March
7, 1994, filing deadline.

To accommodate this request Vice Director Rothberg and the
chairman conducted a survey of our respective divisions using
packet radio, mail and a request to newsletter editors to
reproduce the survey form for club input. Over 730 responses
have been received and tallied. Numeric results track with
anecdotal results seen in member letters to Headquarters.

The Board family has been especially helpful in forwarding and
recounting comments from the field. Directors Burden, Comstock,
Gordon, Heyn, Kanode, Lewis, Olson, Wyatt, Vice Directors
Brackob, (monitoring the discussion on CompuServe) Brown, Frahm
and Rothberg have forwarded member response by mail, through
Headquarters and electronically to the Committee.

Executive Vice President Sumner made members aware of the
Committee's work through an editorial and article in February,
1994, QST. EVP Sumner and VEC Manager Jahnke provided the
Committee with an excellent option paper on electronic submission
of license requests by various means.

Recommendations

1. Who Should Participate

The Committee recommends that the Board adopt the position that
all amateurs be eligible for participation in the program after
an initial phase in period.

While 7% of the respondents to the survey were against the program entirely and another 3.5% wanted to limit the program to General class and above, the majority of comments received welcome the creation of the program while recognizing that some method of initial filtering must be used to keep the FCC from being inundated with applications in the beginning.

2. The issue of Fees

The fee quoted in the Docket, $7.00 per year collected for the length of grant of license (10 years), was set by Congress in the Budget Reconciliation Act of 1993. To change the amount or type of fee would require the League to commit its efforts in the Congress toward changing the fee.

The Committee recommends that the League seek such relief in favor of a one time administrative processing fee with the understanding that no amateur licensee should incur a user fee.

There is no periodic processing expense related to this program after the initial look-up work has occurred. Labor involved with renewal of a Preferred Callsign will not differ in any way from the renewal of a non-preferred callsign, therefor the Committee believes no additional labor charge should be incurred by the licensee.

During the course of this proceeding people filed comments with the Commission asking why those with Preferred Callsigns have to pay recurring, yearly fees. The Commission's response may well be to ask that ALL amateurs pay such user fees. Without question, this would be viewed as an undesirable outcome to such a question.

Additional factors supporting the one-time administrative fee position include the time value of money and reduction in administrative workload.

The Government benefits by collecting the entire fee at the beginning of the process rather than on a yearly basis or at the end of the license term. The one-time fee concept would also greatly reduce the Commission's fee collection workload by not having to administrate an ongoing fee collection process at license renewal time.

3. Holders of previous Preferred Callsigns

The Committee recommends a statement that any callsign held prior to the start of this program shall be considered a sequential callsign and exempt from any administrative fee associated with this program.

4. Phase-in Periods and Priorities

The Committee recommends a phase-in period to allow the Commission a reasonable chance to process the expected heavy

initial submission of applications.

Conversations with Commission Information Services staff in Gettysburg indicate that no additional application processing manpower will be used to work on Preferred Callsign applications. The same four people who process all new and renewal form 610s will be processing the new form 610-V as well. Therefore, a phase in period would be wise to prevent severe overload at Gettysburg.

Phase-in periods may be perceived as "gates". As each succeeding gate opens it will admit applications from a new group as well as any group allowed by a previous gate.

Gate one would allow applications from holders of previous callsigns who have lost their original call through failure to renew at the proper time or having moved from one location to another mandating a change of callsign. A callsign could be recovered even if it did not match the applicants current permanent address.

Included in this group would be those who wish to obtain the callsign of a direct family member. The term direct, as used here, would only include a brother, sister, spouse, son or daughter of the original licensee.

The Committee recommends that clubs with lapsed club licenses also be allowed to recoup those callsigns in the first group.

The second gate would include all Extra Class licensees and those enfranchised by gate one.

The third gate would include all Advanced Class licensees and those enfranchised in gates one and two.

At this point the system would be thrown open to anyone else desiring a Preferred Callsign.

5. Club Applications

Clubs wishing to obtain the callsign of a silent key member could do so in the second gate period if the trustee of the club were an extra class licensee. This should present no problem for most legitimate clubs. Similar logic would apply to trustees with other classes of license.

The Committee believes family members should have first choice of a silent key's call. Should no family member desire the call, the club should have next choice.

It is been the League position that the number of members of a club be raised to at least 4 for a group to be considered a "radio club". This proceeding again emphasizes the need for the Commission to raise the number of members needed to ensure

legitimacy and prevent fraud.

The League's Part 97 Rewrite Committee suggested raising the number of members required in Part 97.5(d)(2) from two to four. The Committee recommends this proceeding be used as an opportunity to restate that position.

The Committee recommends that, for purposes of defining a legitimate club in Part 97.5(d)(2), the number of members be raised from the current 2 to at least 4.

6. Vacated Callsigns

As proposed in the NPRM, a call is considered "vacated" when its previous owner has been assigned a Preferred Callsign. The Commission would put the vacated call into the available pool immediately. The Committee believes this could lead to many problems. As an alternative...

The Committee recommends that the vacated callsign not be reassigned for a two year period.

Incoming QSL bureaus, especially, have noted that many services count on the user callsign being correct. An instant reassignment of a prior held call to a new licensee could cause multiple problems for volunteer service groups, such as the bureaus.

Another consideration is "trafficking in callsigns" The Committee believes that a two year hold on a vacated callsign would preclude questionable practices arising in which one amateur would persuade another to change their call so the first amateur could acquire the desired call. This practice could open up a new area of fraud allowing people to submit questionable documents showing that amateur B wanted to give up a call so amateur A could acquire it.

7. Number of Choices on Form 610-V

The Committee recommends that the number of choices be increased to 25.

This should reduce processing and correspondence time if the 10 requested callsigns are all unavailable. The applicant need not fill in all 25 callsigns, but it would increase the chance of a positive match if the applicant had 25 choices.

8. Retirement of Callsigns

A small number of commenters stated the belief that re-issuance of callsigns of silent keys would be somehow disrespectful. The Committee does not share this viewpoint.

While the Committee was sensitive to the fond memory the silent key's friends might have, the callsign is really the "property" of the Commission and is part of the condition of grant to the licensee. In essence it is "loaned" to the licensee for the term of the license. It would, therefore, become eligible for re-issuance once the renewal grace period had expired.

If an individual passed away just before license renewal time it would be at least two years before the callsign became available for re-issue at the end of the renewal grace period. A more probable condition would be that the licensee would pass on in the middle of the license term. Then the callsign would not become available for between four and seven years after the amateur passed on.

Should an individual, club or group think highly of the deceased, nothing precludes finding an inactive ham and asking the individual to change callsigns by requesting the silent key's old callsign through this program.

9. Out of Area Callsign Issuance

The Committee recommends that within the lower 48 states the Commission continue issuing callsigns with the number within the callsign relative to the applicants current permanent address. This recommendation would be for Preferred Callsigns as well as sequentially generated callsigns.

A quick historical retrospective is in order at this point. One of the original reasons for breaking the continental United States into ten callsign districts was to help the FCC's Field Operations Bureau begin to locate an emitter for enforcement purposes.

Today's state-of-the-art direction finding does not need to know which callsign district the emitter is located in. This fact was part of the rationale the Commission used in eliminating the requirement for a licensee to sign "portable" when away from the licensed station location. Therefore, the Commission doesn't appear to care whether the a licensee has a district indicator consonant with the operators station location.

However, anecdotal evidence in letters and on survey forms indicates that, contrary to the Commission's technological needs, most amateurs have grown accustomed to the practice of callsign numbers indicating which area of the country the licensee is in and would like the tradition continued. The callsign number gives the operators on each end of the circuit an immediate indication of where the other is and "in which direction to turn the beam."

Therefore, the Committee recommends this tradition of issuing callsigns with the number within the callsign consonant with the applicants current permanent address be continued.

10. Outside of the Continental United States

Amateurs in Alaska, Hawaii, Puerto Rico, the American Virgin Islands and in the Pacific have shared their concern with Directors Wyatt and Butler about amateurs being able to acquire callsigns from their area without being a current permanent resident. This is a valid concern because in some areas, notably Hawaii, the KH6 callsign block is nearly gone. Most of it has been assigned to visitors and those who are now deceased.

While the re-issuance of callsigns of deceased amateurs will ease the problem, the Committee recommends that outside the continental 48 states applicants be required to furnish the Commission with some form of documentation indicating permanent residency. Visitors would continue to use the portable designator, thereby not depleting a callsign pool available only to permanent residents.

11. Specific Comments on the NPRM

New 97.19 (c) Substitute the following:

Each request for a renewal of a operator/primary or club station license retaining a call sign assigned under the vanity call sign system shall be made on FCC form 610-V. The form must be submitted [eliminate "with the proper fee"] to the address specified in the Private Radio Services Fee Filing Guide. To renew the license without retaining a vanity call sign, the applicant must use FCC form 610 as specified in Section 97.21.

New 97.19(f)(3)

A call sign that is vacated by the licensee is [add "not"] available to the vanity call sign system [add "for 2 years following the expiration of the license"].

Sentence Added to the end of 97.19(g)

A callsign previously held by the applicant, available to the vanity callsign system but expired, may be requested without regard to license class group or current permanent residence.

New 97.19(g)(1)

The applicant must request that the call sign held be canceled and provide a list of up to [change 10 to 25] call signs in order of preference. The list will automatically end with the call sign vacated as the [change "tenth" to "twenty sixth"] choice.

New 97.19(g)(2)

The first available call sign from the applicant's list will be assigned. When none of those call signs are available, the call sign vacated by the applicant will be reassigned [add "and the administrative fee returned".]

New 97.5(d)(2)

A club station license (FCC Form 660) issued to the person by the FCC. A club station license is issued only to the person who is the license trustee designated by an officer of the club. The trustee must hold an FCC-issued Amateur Extra, Advanced, General or Technician operator license. The club must be composed of at least [change "two" to "four"] persons and must have a name, a document of organization, management and a primary purpose devoted to amateur service activities consistent with this Part.

12. Questions Posed in the Discussion Section

In paragraph 5 the Commission asks about alternative ways to file form 610-V.

The Committee recommends that the same, simple, ASCII format used in League contest filings be recommended to the Commission IS group as a starting point for electronic filing

In Paragraph 6 the NPRM requests comments on distribution of available callsign information.

The Committee recommends that a League computer and modem, or HIRAM be made available, in the short term, as a distribution method with the Commission filing at least weekly updates or sending a disk or disks detailing callsign availability.

Alternately, for-profit data services, such as Compuserve's Hamnet forum, could be used by the Commission to make current callsign information available.

13. Special Event Callsigns

The Committee recommends that 1 X 1 callsigns, such as K2A, be made available for limited duration special events of national significance.

There are likely to be few special event stations of national significance operating at any one time within a single call district. Therefore, the issuance of a 1 X 1 callsign should be possible without measurably adding to the Commission's workload.

14. Final Comments

The Chairman would like to thank the Directors Butler, Comstock, Kanode and Wyatt, EVP Sumner and VEC Department Manager Jahnke for the hard work they did in such a compressed time period.

A statistical treatment of the data used to derive the Committee's position will be sent as an enclosure to this report.

Respectfully Submitted,

Stephen Mendelsohn, WA2DHF, Chairman

In issue #396, Ed Lieser asked for info on operating repaeaters in Germany while visiting.

It has been 9 years since I moved back home from Germany so I am sure things have changed, particulary in the area of reciprocity and licensing. However, the ARRL should be able to provide a licensing/info package for any western European country you are interested in operating from as well as others. Some are easy, some are not.

The key technical issue to be aware of is most European repeaters are triggered by a tone burst (1750 hz as I recall). If you don't have that capapbility on your rig you won't be able to bring up the machines.

Most of the DL repeaters are in German unless you are near one of the British or American bases (and there are a lot fewer of them now than when I was there).

Have fun and sch?ne Reise!

On the Northern VA Traffic Net (NVTN) operated on the 147.30+ repeater (Bluemont, VA), the repeater operates in "net" mode which means that it doesn't ever time out and sends a cw "n" between input transmissions. The protocol for checkins on this (directed) net is as follows:

a. NCS calls for net liaisons from other nets first;

b. NCS calls for stations with traffic;

c. NCS calls for stations wishing to check in, usually asking for mobile stations only first, then others.

Stations checking in usually begin the transmission by saying "This is" and then UNKEYING THEIR MIKE AND PAUSING MOMEMTARILY TO LISTEN FOR ANOTHER SIMULTANEOUS CHECKIN. If you hear another station, you wait until he/she has checked in and then begin again with "This is." When you say "This is," pause and hear nothing, you then rekey and say your callsign (preferably phonetically) and the phrase "no traffic" (or "with traffic," if appropriate, or "liaison for XYZ net with {without} traffic," or whatever).

EXAMPLE: "This is" (pause) "Kilo four mike sierra golf, no traffic"

This procedure works extremely efficiently; everyone gets recognized with a minimum of confusion, there are seldom any dual transmissions (unless someone DOESN'T follow the above procedure; occasionally someone says "This is" and DOESN'T pause and listen), and checkins go quickly. There are probably other equally effective methods; I'd like to hear about them.

Michael Malloy (mmjjmm@post.its.mcw.edu) wrote:
: I hope to be bicycle mobile on 2 meters this summer. Any suggestions on
: equipment and antennas would be most welcome.

I tried mounting the HT (handheld transceiver) to the handlebars. I used some kind of clamp from my "bicycle junkbox" (I think it was a generator mount) and just used the HT's belt clip to attach it. It made a good secure connection, but I was worried about the vibration's affect on radio reliability. (I do a lot of riding on bumpy roads).

Now I just use the low-tech solution of just clipping the HT to my belt. (Admittedlty a bit difficult if you wear Lycra!) The only problem is I have to turn up the volume, which can annoy other riders. I think a speaker mic clipped to my shirt collar would solve that problem.

The antenna you are seeing in Ft. Collins is the WWVB 60 KHz vertical.
The horizontal wires are the top hat (capacitive loading). They
also support the vertical.

: The standard for FM Broadcast is a fairly wide standard. If you want to use
: something for a standard try an AM broadcast station. They are required to be
: inside of 20 Hz limits above and below their assigned channel. I believe the
: FM stations are allowed several Kilohertz of deviation.

I didn't post the numbers, because my data may be years out of date, but
it USED to be 20 Hz for AM and 2 kHz for FM. I remember because it's almost
exactly the same percentage accuracy (about 20 ppm).

But I expect that most modern broadcast stations are much better than the
requirement nowdays.

Philip Kahn (pkahn@Csli.Stanford.EDU) wrote:
: I have been reading up on doppler RDF's. The Amateur Radio Handbook
: has an article that says they can only do well to about 5 degrees.
: Have you heard of systems or ways to do it that gives better results?

I've been using the "Dopplescant" described in May 78 QST for about
that long, off and on, and have a couple comments kind of tangent
to what Gary C. noted in another followup:

First, though you can build a doppler system that accurately reads
apparent direction with better than 5 degree accuracy, I see little
point, at least for the typical bunny hunt where the RDF receiver system
is mobile (vehicle or on foot). Multipath makes it quite unlikely
that better than 5 degree accuracy at the receiver is worthwhile, and
the mobility means that in practice, you move toward the bunny and
simply don't worry about small errors.

Second, though you can undoubtedly achieve high accuracy with
careful construction, another way that should be as applicable to
doppler antennas as to many other areas is calibration. For a given
system, if you understand how the errors will affect the readings
and calibrate often enough and at enough points (which could be one
thorough calibration and an occasional single-point check), you can
get the errors quite low. You can't resolve ambiguities that way,
so the raw (uncorrected) output has to have an appropriate d(out)/d(theta)
at all angles.

Finally, for best results, use equipment with adequate basic
performance, and spend some time learning to use it under a variety of
conditions. You will find that the best results are obtained by
using multiple techniques and using your head to understand what the
several sensors are telling you.

The Inuvik Amateur Radio Club would like to thank everyone who made our expedition to Hendrickson Island, Northwest Territories a success. We would especially like to thank all the operators for their patience under very poor band conditions and the relative inexperience of the expedition members in dealing with such large pileups.

The expedition departed Inuvik Friday morning as planned, travelling in three vehicles over the "ice road". The road stretches 200km over the Mackenzie River and the Beaufort Sea ice from Inuvik in the Mackenzie River Delta to the community of Tuktoyaktuk on the Arctic coast. This road passes within 15km of Hendrickson Island at which point the equipment was loaded into a sled and pulled by snowmobile across the sea ice to the island in two trips. Within an hour of arrival a 20m dipole was erected and the first station went on the air using solar panels and batteries. Over the next several hours antennas for the other bands were erected, including the homebrew vertical at 50ft. that was used for the bulk of the contacts on 20 meters.

Propogation was very poor for the duration but steady contacts were being made and at one point 20m, 40m and 80m were all open and being worked by the members. In all only 300 contacts were made over the 24 hour duration of the expedition but considering the band conditions at the time that is more than was expected. The island group is now officially North America 192, Inuvik Region West.

Please QSL via VE8NC. Cards are being printed this week and should be ready for distribution before the end of the month. Due to the poor conditions, anyone who is unsure if they made a good contact are invited to send a note via internet to ve8ev@inukshuk.gov.nt.ca and I would be happy to reply as to whether or not they appear in the log.

Hmm, sounds like what I'm going through. I took my took my Novice &
Tech written on Feb. 6. It's been nine weeks and a day (but who's counting)
since then, and nothing. O.K., I know the "average processing time for a
license application is ten to twelve weeks from the time we recieve you
application" (from the nice lady at Gettysburg). But I'm still wanting to
get on the air.
As to informing the congressman, maybe that's not such a bad idea.
If the FCC starts getting calls from congressmen to find out what's going
on, maybe they'll start getting license applications processed a little
quicker.
Which brings me to a question. Why does it take so long to get
applications processed?
Anyway, I'm keeping a eye on the mailbox and waiting for that
wonderful day.

Scott Dorsey (kludge@netcom.com) wrote:

: Most of the stations out here in rural VA don't have engineers on-staff
: any longer, and they only fix things when they become catastrophically
: broken. This does not tend to result in the best quality signal making
: it out over the air.

Pardon the drift, but as the following story illustrates, this has been going on for longer than deregulation.

A bit over 20 years ago, I was stationed at a Naval outpost in the Aleutians. A friend build a stereo receiver from a kit, and aligned it according to instructions. He complained of distortion on the only FM signal on the island. He asked me to have a look at it. I went through the alignment again, and everything was right on, and for a non-electronics type, he had done a wonderful job putting the thing together. But closer inspection revealed rather high modulation by the station. I could even see it on a triggered scope on the IF, when the stereo pilot tone was the only modulation. Using a spectrum analyzer and figuring with Bessel functions, we found the pilot tone at about 50% of full deviation: way, way over what it was supposed to be. Best we could tell, it was in the right relation to the rest of what was being broadcast: ALL very much overmodulated. Well, being rather naive in such things, we wrote a letter to the area FCC representative; our "morale officer" signed it, too.

A week or so later, our department head rounded us up and told us we had a meeting with the executive officer. Like in Arlo Guthrie's "Alice's Restaurant," we figured there were only about two things they could want to talk with us about, either to thank us for pointing out the error or to ask for more info. "When we arrived, we discovered there was a third possibility we had not counted upon..." It turned out that the "area FCC representative" was in the Naval Station command, which was separate from our Naval Air Station on the same island. And we had in effect put our CO on report to an officer junior to himself outside his command. They were not happy about this aspect, even though they sincerely appreciated our interest in getting the station to put out a quality signal. We were assigned the task of helping the station solve the problem. Well, when we went to meet with the officer in charge of the station, things were definitely cool: you could about freeze ice in that room. One might surmise that fellow had also had a meeting with the XO which was much less cordial than ours. Even though we clearly had the equipment to calibrate their modulation monitor, no way were they going to let us touch it: it had to go back to AFRTS headquarters for repair and recalibration. And they weren't interested in recommendations for limiters: those,

too, would have to come through AFRTS. Fortunately, that whole thing just died a quiet death. The next call I got to see the XO filled me with some trepidation; but it turned out to be _far_ more pleasant and the FM station thing had indeed been forgotten.

531. Special receiver needed?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-11 23:28:39 UTC
From: kyd@kali.EBay.Sun.COM
Message-ID: <2ocmf7$q8c@male.EBay.Sun.COM>
Source record: 268598

I have a question about a special S.C.A. (sorry, I don't know what it stands for) receiver that is required to receive Boadcast Services for the Blind. I've talked to the BSB people, and they will loan me the receiver (I can't buy it) but I would have to go to downtown San Francisco to pick it up (not :-). I would also have to give the name/address of a close friend/relative who would be willing to hunt me down should I choose to abscond with this magic receiver.
I asked the BSB folks what frequency this service was broadcast on and they did not know (I'm not sure the person I was talking to understood what a frequency was:-), but said it was broadcast from KPFA/KPFB (People's Republic of Berkeley). They also said they weren't sure I'd be able to pick up the signal even if I did have a receiver (I'm about 25 miles away in San Jose).

My question is: is this some sort of encoded broadcast that requires a special decoder ring (receiver), or is it just broadcast outside of the normal AM/FM broadcast frequencies? I have receiver coverage from 25Khz - 2000Mhz, so if I could find out the frequency I should be able to listen to BSB (if it's not encoded) without having to go to San Francisco to pick up the S.C.A. receiver. Any ideas would be much appreciated.

Please reply via email (as I don't get much time to read the newsgroups) and I'll post a summary (and hopefully an answer). Thanks in Advance!

Karen deWeeger (kyd@EBay.Sun.COM)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 11/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 11 APRIL AND FORECAST UP TO 14 APRIL

IPS Warning 10 was issued on 31 March and is still current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 074/011

1B. SOLAR FORECAST
12 April 13 April 14 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active, with one minor
storm levels 03-12UT.

Estimated Indices : A K Observed A Index 10 April
Learmonth 30 3555 4433
Fredericksburg 27 31
Planetary 36 31

Observed Kp for 10 April: 5545 5434

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
12 Apr 35 Unsettled to active with minor storm levels possible
particularly during local night hours.
13 Apr 30 Unsettled to active with minor storm levels possible
particularly during local night hours.
14 Apr 25 Unsettled to active.

2C. MAGNETIC COMMENT
None.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
11 Apr fair-normal fair poor
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
12 Apr fair-normal fair poor
13 Apr fair-normal fair poor
14 Apr normal fair-normal poor
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were mostly depresssed 20-30%. Spread F occurred
17-21UT and sporadic E occurred 12-16UT, obscuring the F layer
between 12-14UT.

Observed T index for 11 April: 2

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
12 Apr 10 Mostly depressed about 20%.
13 Apr 10 Mostly depressed about 20%.
14 Apr 10 Mostly depressed about 20%.

4C. AUSTRALIAN REGION COMMENT
Sporadic E and spread F may degrade communications during night hours.

Please note -- there will be no FEC relay 17th and 24th April

Ex-relay officer back on air

Do you remember John (VK2CFJ) who left us some time back to join his family in England? Johns first house purchase proved unsuccessful from an amateur viewpoint when he was refused permission to erect a tower for his beam.

John has since relocated and now has his beam up and is operating into VK2AGE under his English callsign of G0SPO. If anyone who used to call back to him after the cast would like to contact John, we have his packet address.

It is G0SPO at GB7MHD.(hashmark)22.GBR.EU or you can leave it with VAGE on Amtor.

John sent, quote, 73 to you and other ANARTS denizens, unquote, hi hi.

A note from Bob G0ARF (BARTG)

This quote is a letter sent to Jim VK2BQS, ANARTS Contest Manager recently.

Dear Jim,

Many thanks for the latest rules and date of the next ANARTS RTTY contest.

The full contest rules and dates will be published in the BARTG RTTY news broadcast GB2ATG scheduled for the first full week in May. Copies of the bulletins are distributed to the UK packet network at GB and WW on the DX Cluster and BBS systems. They are also posted on the Internet system via the Info-Hams list which is accessible world-wide.

The BARTG GB2ATG news broadcasts use RTTY, Amtor-Fec and Pactor-Fec to serve amateurs of all data interests.

It was interesting to note the increased RTTY activity by G, GI, GM and GW stations during the BARTG HF RTTY contest and we all hope this result from the efforts of the committee to raise the profile of the BARTG both at home and abroad.

For myself, I have my annual trek up the mountain in the Radnor Forest on the 10th to support the BARTG VHF RTTY contest from 2,200 feet above sea level which is a very pleasant day out if the weather is kind. Last year torrential rain reduced visibility to 10 yards and I was glad to descend to the comfort of the local pub.

My wife is now fully recovered from her troubles of last year so I look forward to a full calendar of contests and working a few more VKs if conditions allow.

Warmest regards from Hereford and greetings from the committee and members of BARTG.

Sincerely
Bob Canning G0ARF GB2ATG news editor for BARTG

As promised late in March, here are the rules for the new contest (part 1)

SP DX RTTY Contest April 23-24, 1994

Sponsored by: Polski Zwiazek Krotkofalowcow (PZK). Organised and run by Polish Radiovideography Club (PKRVG).

Contest period: From 1200Z Saturday to 2400Z Sunday (36 hours). No rest period required.

Contest call: CQ SP RVG Test

Mode: RTTY only

Bands: 80, 40, 20, 15, and 10M

Categories: A. Single operator, all band
B. Multi-operator, all band

Message exchange: Send - RST plus CQ Zone number
SP stations send - RST plus Province (2

letters)
Note: Polish stations will use a 2 letter abbreviation of
their province. There are 49 (forty-nine) SP provinces.

More next week

IPS weekly report
---

1 April - 7 April 1994

Issue No 14
Date of issue: 8 April 1994

INDICES:
Date 01 02 03 04 05 06 07
10cm 082 079 077 077 077 073 073
A 05 44 53 39 24 31 (33 estimated)
T 24 35 31 46 64 25 27

SUMMARY OF ACTIVITY

Solar activity was very low throughout the period.

The geomagnetic field at Learmonth (WA) was quiet on 1st April, quiet to unsettled on 2nd until 0600 UT after which active to minor storm levels were observed. These levels continued until 5th where the field was mostly unsettled to active except for one major storm period observed during local night. The field on 6th was unsettled early, rising to active to minor storm levels where it remained until the end of the period.

Ionospheric F2 critical frequencies at Sydney on 1st were depressed slightly early, then near monthly predicted values. On 2nd frequencies were near normal until 2100 UT, afterwards becoming depressed by up to 30 percent until local night on 3rd when frequencies were enhanced 15 per cent. Frequencies were near predicted values on 4th, rising to 15 per cent above on 5th. The 6th was mostly near predicted levels with depressions of 30-40 per cent at 0000 UT and 1800-1900 UT. Frequencies were up to 15 per cent depressed on 7th April.

Spread F was observed on 1st and 3rd April.

FORECAST FOR THE NEXT WEEK (8 - 14 April)
SOLAR: Very low.

GEOMAGNETIC: Active, with minor storm periods during local night. This activity is a continuation of
coronal hole sourced activity which began after
0600 UT on April 2.

IONOSPHERIC Poor to fair HF comms conditions, with MUFs 10-
15 per cent down on IPS predicted monthly values.
Courtesy of IPS Radio and Space Services

As there are no VK2SG RTTY DX notes available this week due to poor propagation, we offer the ARRL DX Bulletin no. 19. There is some corruption in the text but we hope it will provide news of interest.

Recognisable corrupted portions will be enclosed in parentheses, we hope callsigns are unaffected.

DX bulletin 19 ARLD019
from ARRL Headquarters
Newington April 7, 1994
To all radio amateurs

The items in this weeks bulletin are courtesy of Patrick, BLQ/TU5DX, EMIR, 9A2NR, Bob, N4CD, XCHOD, VP2ML, The DX Bulletin, the Ohio/Penn DX 700358, the Yankee Clipper (Contedmlqlub) Packetcluster Network and Contest Corral from the pages of QST.

Rwanda. Paul, F6EXV, plans to continue on as 9/5dx until the end of May. Check 18140 KHz between 1630 and 1700Z. He requests all to please avoid making duplicate QSOs. QSL via F2X.(?)

Iraq. YI9CW gets on 14006 KHz at 1745Z, 18085 KHz between 200 and 1600W, and 24900 KHz at around 1345Z. QSL via SP5AUC.

Nigeria. Patrick, TU5DX, has left the Ivory Coast and is now in the Lagos area. Here are some recwent spots for 5N. (7-. knnj6mgv) on 14235 KHz at 2239Z. QSL via WAWVTUD (?). 5N1mre on 14207 KHz at 2116Z. George, 5N8LRG on (WQQKWAL) KHz at 2318Z. Paolo, 5N8NDP, on 14347 KHz at 233Z5 QSL viua IK5JAN.

Kerguelen Is. Pierre, (!55XJ), was heard this past weekend for over an hour on 14208 KHz starting around 0315Z. QSL via F5N.

Ethiopia. (CWKXGAR) the 9F2CW/A operation of Rudi, DK7PE, from Asmara will be accepted for Ethiopia credit. Although the operation was from the same hotel as the 9ER1TW/TB operation licensing was from the transitional government of Ethiopia. All other operations from Asmar since 1991 have been licenced by the provisional government of Eritrea.

ITU HQ Geneva. Luc gets around. I1YRL will be operating ITU HQ station 4U1ITU GPSIA the next few weeks. Prefix hunters note that the call 4U9ITU will be used during April. QSL via I1YGL.

Bermuda. Fred, K1EFI, will sign /VP9 May 12 through 20, with most efforts concentrated on 80 through 10 meter CW. QSL via K1EFI.

Anguilla. Listen to KB8WC, N8LXS and KO8O to sign VP2EOH April 18, 19 and 20. QSL via K8BL.

Saint Kitts and Nevis. The VP2EOH crew will sign V47WC from Nevis on SSB and V47XS on CW April 22 through QVI 40 meter CW will get special attention. QSL V47WC via KB8WC and V47XS via N8LXS.

Trinidad and Tobago. Newly(?????) 9Y4TSB has been heard on 21360 KHz between 2000 and 2100Z. QSL to Trueman Braithwaite, Bon Accord, Tobago, West Indies.

On a sombre note. Eva, PY2PE, a well known friend of the DX community became a silent key on April 1.

QSL Notes. EMIR (?A2NR) is handling cards for ZAWM, T99Z. Cards for VP2E/N4CD and VP2E/N2TPH should go via the 1992 CBA of N4CD. TU5DX logs for October 1992 to February 1994 are in the hands of QSL Manager F6ELE.

Coming events
1994

April 16th-17th SARTG WW AMTOR Contest

23rd-24th 1ST WW SPDX RTTY Contest

Paper for Teleprinters

Please, PLEASE, does anyone want some teleprinter paper, I have boxes of it. It is triplex paper (three sheets of paper, two sheets of carbon paper), you can have it for the cost of freight (you pay the freight). This paper will work in any pressure machine, or even typewriters, no good for tractor machines. When you unroll it you finish up with three rolls of paper and two rolls of carbon paper. The paper you can use, the carbon -- well you can give it to the children to mess up the house. Don't worry about the amount you want, I have enough.

Contact Syd VK2SG, phone 02-631 2576 or ok in the call book.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the

President (Col) VK2CTD, or the Secretary (Pat) VK2JPA@ VK2RWI.

News items may be sent to Broadcast Officer PO Box 60
Blacktown 2148 Australia, or by packet to VK2JPA @ VK2RWI.

Email address for the Broadcast Officer is :

patl@conmusic.pitt.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We know we reach New Zealand and many South Pacific islands, and we were reaching as far north as Japan when conditions were right. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

Footnote: References to VK2RWI refer to if and when it is again operational, in the meantime Pat may be using any of a number of BBS, VK2BQS uses VK2DAA.

That concludes ANARTS News Bulletin 804 10/04/94.
Inserted by VK2BQS (Jim) Vice-President ANARTS.

536. STRONG FSK signal at 14.265 MHz? What is it?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-12 01:29:16 UTC
From: dgf@netcom.com
Message-ID: <dgfCo4HGu.DqE@netcom.com>
Source record: 268603

Does anyone know anything about the strong FSK signal at 14.265?
It's been on continuously for at least a day or so; seems to be
coming from the east (as seen from Denver). 73 Dave WB0GAZ dgf@netcom.com

537. New 1.2 GHz. Repeater on-the-air in Charlotte.

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-12 01:32:51 UTC
From: kdj@VNET.IBM.COM
Message-ID: <199404120134.SAA07345@ucsd.edu>
Source record: 268604

This past weekend, a buddy and I installed what we believe is the first
1200 MHz. repeater in the Carolinas. So far we've tested out to a
radius of about 50 miles from Charlotte with good coverage in all
directions. The repeater is workable with one watt from most of
Mecklenburg County, and the surrounding area. If you're interested:
Transceiver: Kenwood 541 running at 10 watts out...
Antenna: Diamond 1/2-wave fed with about 12 feet of 9913..
Controller: Spectrum HRC-10 simplex controller..
Location: 34th floor of First Union Atrium on 2nd St. between
Tryon and College.
Operating Freq: 1285.500 MHz. SIMPLEX.
(may be upgraded to conventional repeater later.. we wanted to play
around with the simplex configuration for a while..)
The site was abandoned by the local 2m club because it's a high-noise
environment, with low-band/high-band/UHF commercial stuff and 900 MHz.
paging, etc.. no problem for our 1.2 gear.. we're very pleased with
the performance -- it's beyond our expectations.
So, if you're passing through the area or close enough to hear it,
(and you have the right radio), give us a shout.
de KA4YMY (Steve) and KC4YOZ (Ken).

Does anyone else out there do any 10 meter work while mobile? At a recent hamfest, I picked up a used HTX-100 and antenna. Although there's not much activity on the band, I've managed to get Germany and southern California with just 25 watts and a converted CB antenna. Has anyone else had any luck on 10 while mobile?

Message-ID: <151@winward.win.net>
Source record: 268607

Aloha !
I'm moving to the Bay area, and would be interested if there are any Satellite (SAREX) folks that I could get connected with ? I designed and built the SAREX station that is presently used in Hawaii, and would like to continue this project on in the bay area...

so if any one of you are already active in SAREX with stations or need an extra hand I'd like to help out.

I'll be in the bay area starting the 17th of April. Let me know if there are any repeaters that have SAT. or SAREX interested folks so I can maybe check in.

Green Card Lottery 1994 May Be The Last One!
THE DEADLINE HAS BEEN ANNOUNCED.

The Green Card Lottery is a completely legal program giving away a certain annual allotment of Green Cards to persons born in certain countries. The lottery program was scheduled to continue on a permanent basis. However, recently, Senator Alan J Simpson introduced a bill into the U. S. Congress which could end any future lotteries. THE 1994 LOTTERY IS SCHEDULED TO TAKE PLACE SOON, BUT IT MAY BE THE VERY LAST ONE.

PERSONS BORN IN MOST COUNTRIES QUALIFY, MANY FOR FIRST TIME.

The only countries NOT qualifying are: Mexico; India; P.R. China; Taiwan, Philippines, North Korea, Canada, United Kingdom (except Northern Ireland), Jamaica, Domican Republic, El Salvador and Vietnam.

Lottery registration will take place soon. 55,000 Green Cards will be given to those who register correctly. NO JOB IS REQUIRED.

THERE IS A STRICT JUNE DEADLINE. THE TIME TO START IS NOW!!

For FREE information via Email, send request to cslaw@indirect.com

542. SAREX QSO Opportunities

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-12 11:24:17 UTC
From: ABFHB@STDVAX.GSFC.NASA.GOV
Message-ID: <940412072417.2b808c57@STDVAX.GSFC.NASA.GOV>
Source record: 268481

SB SAREX @ AMSAT $STS-59.011
SAREX QSO Opportunities 4/12

Greenbelt, MD, 4/12/94 at 11:00 UTC

The Shuttle Amateur Radio Experiment (SAREX) school group contacts have been quite successful. At this point, all but one school is complete. The SAREX Working Group will have more details on the success of these schools in later bulletins.

These succesful contacts have opened two school backup passes which can now be used for general voice operations. The SAREX Working Group anticipates that the STS-59 crew will be on-the-air during Orbit 56, which covers the western United States, starting around 20:56 UTC on April 12. In addition, the Paltamo, Finland, backup pass will provide hams in the Northern European area the opportunity to work the shuttle. This opportunity is expected to start at 7:08 UTC on April 13 during orbit 63.

As a reminder, the following are the voice uplink and downlink frequencies for SAREX:

Voice Downlink: (Worldwide) 145.55 MHz
Voice Uplink: 144.91, 144.93, 144.95, 144.97, 144.99 MHz
Voice Uplink: (Europe only) 144.70, 144.75, 144.80 MHz

Also, the voice call signs are N5QWL and N5RAX

The SAREX Working Group wishes you the best of luck in your efforts to contact the astronauts on the space shuttle Endeavour.

Submitted by Frank H. Bauer, KA3HDO for the SAREX Working Group

Have noticed much additional hiss on received audio while transmiting with a speaker mike or any external source. Even just shorting ptt/audio to ground gives a noisey signal at the other receiver. My ft-470 is fine with this same test. Anyone else have a simular problem? Endemic of the 23 or something I can fix?
Ken.

>Let me suggest that you start small. Build a receiving converter
>for 6 meters and listen for a while. If you like what you hear,
>then build a transmitting converter too.

Good advice, but one caution: The IC-735 transverter output is
only about 60 mV, or around -10 dBm. Some of the transverter designs
I've seen (and kits as well, such as from DownEast Microwave) require
1 mw of input (0 dBm) which is about 225 mV rms. Check the design
carefully to see if there is an input pad which can be removed, or
if a low-level stage can be added as an option (DownEast has indicated
that they will do this on their 6/2/220 MHz transverter kits).

Ten-Tec has a new 6-meter transverter kit coming available soon
which will accept up to 5 w. of input drive and give 8 w. out on 6
meters; IF is 14 MHz. Kit cost is $95; call and ask for their kit
catalog (615-453-7172). Also available assembled for about $160.

547. Digest of Articles - QST July 1993 (Long - 33k)

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-12 13:45:29 UTC
From: wvanhorn@magnus.acs.ohio-state.edu
Message-ID: <38528.wvanhorn@magnus.acs.ohio-state.edu>
Source record: 268610
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

DIGEST OF ARTICLES -- QST, July, 1993

Following are digests of articles printed in the July, 1993 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. Subsequent issues will be posted one per week until they "catch up" to the current date in mid-1994, thereafter monthly.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

Title>TA1:A Synchronous Detector for AM Transmissions
Author>Vermasvuori, Jukka - OH2GF
Source>QST Jul 1993, pp. 28-33
Abstract>A construction article describing a synchronous detector for AM reception. It supplies a locally-generated carrier which eliminates the severe distortion caused by selective fading when the strength of the received carrier drops relative to the sidebands.

Digest>People who enjoy listening to foreign "shortwave" broadcasts, as well as others, are frequently annoyed by the severe distortion that occurs in conventional broadcast receivers when fading causes overmodulation distortion due to the carrier strength falling below that of the sidebands. Mr. Vermasvuori has designed and built a synchronous detector using a locally-generated beat-frequency oscillator (BFO), synchronized with the received carrier, which remains at a constant strength. The same BFO is also useful since it allows the reception of CW signals on a broadcast receiver.

Synchronous detection provides some other advantages, as well: no signal-to-noise threshold; suppression of adjacent-channel splash; rejection of synthesizer phase noise; low harmonic distortion in audio, independent of signal level; and other desirable effects.

The system uses three integrated circuits that were originally designed for use in FM receivers, plus a modest number of discrete components. The author uses it with a Sangean ATS-808 "all-band" receiver, which is also sold as the Radio Shack DX-380. He built it into a long, narrow metal box dimensioned to be attached to the underside of the receiver. Because of the very high gain of the ICs, parts layout is somewhat critical and signal leads are routed around the chassis through small-diameter coax cable. Since it is designed to operate with an i.f. of 450-455 KHz., it can probably be used with almost any receiver that has an i.f. in that range; with modifications it can no doubt be used with any other superheterodyne receiver, as well. The author notes that his synchronous detector requires as little as 3 mV. of i.f., or 30 dB. less gain ahead of the detector than conventional receivers require. Hence, its use could simplify receiver construction.

In a side-bar, David Newkirk, WJ1Z, reported success in using the system with a Drake SW-4A receiver and an ICOM IC-729 Transceiver. He states that he got good results whenever he was successful in getting "interference-free i.f. drive". He was not successful using it with a Japan Radio Company JST-135HP transceiver because he was not able to eliminate i.f. interference and could not take the time to analyze where

it was coming from.

Mr. Vermasvuori reports that his modified Sangean receiver works very well for his purposes, as he demonstrated during a recent visit to the USA. From Massachusetts, he was able to follow Radio Finland's one-hour daily SSB transmission beamed toward Western Europe on 15,330 KHz. "with adequate signal quality".

Title>TA2:Honey, I Shrunk the Antenna!
Author>Newkirk, Rod - W9BRD
Source>QST Jul 1993
Abstract>Report on experiments with small loops for transmitting antennas. Included are loops with up to 4-turns.

Digest>The author describes the results of his experiments with small loop antennas used for transmitting. He defines "small loops" as those with 1/8 wavelength of wire, or less. His approach differs from the many other articles published in the last few years about small transmitting loops in that he is using 2-, 3-, and 4-turn loops. He made his loops square with the bottom- and top-sides horizontal. A capacitor is inserted in the center of the lower leg of each turn, all capacitors of equal value except for one, which is variable for tuning.

His experiments started with a 40-meter antenna of a single-turn, 3-1/2 feet high and 4-1/2 feet wide, resonated with about 40-pf. capacitance in the lower leg. It was fed at the center of the top leg and showed a resistive input impedance of approximately 5- or 6-ohms. Then he doubled the number of turns by using "zip-cord" for the two conductors, and inserted another 40-pf. capacitor in a symmetrical location in the second loop. Now the input impedance measured approximately resistive 25-ohms. After adding a third turn and capacitor, he found that the impedance had risen to about 50-ohms and was a near-perfect match to 50-ohm coax.

The multi-turn loop performed as would be expected with such a high indicated impedance. In contrast to the single-loop antennas reported in the literature, when fed with 100-watts of power at 40-meters, no excessively high r.f. voltages or currents were observed. Midget capacitors designed for receiving use were adequate and the tuning capacitor did not arc-over. The author even reported that the band-width can be made to approximate that of a normal half-wave dipole if the three loops are slightly stagger-tuned.

Following such excellent results on 40-meters, he added a fourth turn, with still the same dimensions, and tuned it to 80-meters. Resonance at 3.6 MHz. required approximately 100 pf. in each of the four capacitances. At this frequency, the measured impedance was now about 18-ohms resistive, so the author fed it with a simple gamma-match.

Finally, Mr. Newkirk tuned the four-turn loop to 160-meters! At that wavelength, it is only 1/32-wavelength in circumference, although it

contains 1/8-wavelength of wire. The capacitance of each of the capacitors was 350 pf. to resonate at about 1.85 MHz.

As soon as the antenna was operable on each of the bands, he operated with it and made numbers of QSOs, even though his shack is in his basement and the loop antenna was about half below ground-level! On 80-meter CW, he made contacts on the East Coast and west as far as Arizona, from Chicago. Running 40-watts on 160-meter CW, he had QSOs in the East, South, and Midwest.

Finally, he tried the same loop on the higher frequencies. He found that a 2-turn loop works well on the 30- and 20-meter bands with 20 pf. capacitors for 20-meters and somewhat higher for the 30-meter band. Feed impedances in both cases are about 50-ohms. For 17- and 15-meters, he continued to use the 2-turn loop, but split each turn in both the top and bottom legs with 15-pf. capacitors, and fed it in one of the vertical legs. Again, it matched the 50-ohm feedline well.

For proper operation on 10-meters, he cut back to a single loop, split top and bottom with 12-pf. capacitors, again fed with 50-ohm cable at the center of one of the side-legs.

Title>TA3:IROESON:An Infrared Optoelectronic Keyer
Author>Cebik, L. B. - W4RNL
Source>QST Jul 1993, pp. 36-39
Abstract>Construction of a keyer utilizing beams of light which are interrupted with the fingers to form Morse code.

Digest>This same author wrote an article published in the February, 1992 QST entitled: "IROESK: An Infrared Optoelectronic Straight Key". It described a straight key which was built using an infrared beam between a light source and phototransistor detector; the operator closed the keying contacts by interrupting the light beam with a finger.

In the present article, he extends the principal to provide two such light beams which can be interrupted with fingers, one for dots and the other for dashes. In both cases, his intent is to remove most of the physical effort in keying, especially for handicapped people or ones suffering from arthritis.

In addition to the optoelectronic "switches", an integrated-circuit (IC) chip and a number of discrete components are assembled on a small printed-circuit board which is mounted, along with some switches and a knob to form a complete keyer.

Mr. Cebik built his unit attractively using a combination of wood and Plexiglas(TM). When operated, the user manipulates it by using any two fingers moving in vertical motions. The fingers "tap" on a Plexiglas shelf. He also indicates that other models have been built in a vertical assembly which is keyed with horizontal motions, more similar to a bug or paddle.

The article contains complete wiring diagrams, parts lists, and photographs of the horizontal (finger-tapping) model. PC-board templates, digrams, and a schematic of the vertical model are available from ARRL Headquarters for a business-size SASE. Address the request to: Cebik IROESON Keyer PC-board Template, Technical Department Secretary, ARRL, 225 Main Street, Newington, CT 06111. Components, PC-board, and other parts are available from FAR Circuits, 18N640 Field Court, Dundee, IL 60118-9269.

Title>TA4:Reverse-Polarity Protection for Your Gear
Author>Covington, Michael A.
Source>QST Jul 1993, pp. 40-41
Abstract>Circuitry to protect electronic equipment from damage caused by inadvertent reversal of the polarity of supplied power.

Digest>Much electronic equipment can be damaged or destroyed if the power supply polarity is reversed. The author shows several simple and inexpensive applications of solid-state components that can provide complete protection.

The first, and simplest, is a diode in series with the load. The only drawback to its use is that every silicon diode causes a voltage drop of about 0.6 volts. In most cases, this causes no problem unless the supply voltage is low, in which case the drop is a large percentage of the total.

If the series connection diode cannot be used, the next best approach is to put the diode, with inverse polarity, in parallel with the load. This assumes that there is a fuse or circuit-breaker in the power supply. Reverse polarity will "see" the diode as a direct short and instantly "pop" the breaker, assuming that the diode has a higher current rating than the breaker. Care must be taken that the diode is not so small as to "pop" before the breaker does!

Next, Mr. Covington shows applications of N-channel MOSFETS acting as switches that will close only if the polarity is correct. Finally, he shows that a low-voltage-drop PNP voltage regulator provides inherent reverse-polarity protection.

Title>TA5:Ironing Out Your Printed-Circuit Boards
Author>Grebenkemper, John - KI6WX
Source>QST Jul 1993, pp. 42-44
Abstract>A description of a simple and inexpensive way to apply patterns onto PC-board material for etching. A mirror-image of the pattern is first printed on paper by a Xerox, or equivalent, printer. It can be transferred onto the copper foil by ironing it with a pressing iron. Then the paper can be removed after soaking it overnight in water containing a small amount of chlorine bleach.

Digest>Printed-circuit boards can be made in many different ways. The most satisfactory method is the photographic technique using a light-sensitive coating that is developed like a photograph and etched. But for experimental or one-at-a-time projects, it is expensive and time-consuming. Mr. Grebenkemper shows a method that is quick and inexpensive.

He starts with a drawing or photograph of the desired pattern which may be taken from a magazine article, or hand-drawn. A copy is made on a Xerox, or equivalent, machine. The copy must be a "mirror-image", which is conveniently made by copying on a transparency, turning it upside-down, and recopying onto paper.

The "ink" that is deposited on the paper is made of particles of black pigment in a binder, or "toner", that melts at elevated temperature. It can be transferred onto the copper foil on the PC-board blank if it is placed face-down and heated from the rear with a home electric-iron. It melts at about 300-degrees F. (149-degrees C.)

After it is melted in contact with the copper foil, the paper, image, and PC-board will all be stuck together. The paper can be removed, leaving the image on the copper, if one soaks it overnight in a solution of water and chlorine-bleach. When the paper is removed after soaking, paper-fibers will be left sticking to the toner. Most of them can be removed with a soft brush.

Once the paper fibers are gone, the pattern should be inspected carefully with a magnifier. Any gaps or flaws must be repaired with a "resist-pen". Finally, the board is etched in the normal manner.

PRODUCT REVIEW (PR)
conductor: James W. Healy, NJ2L
Sr. Asst. Technical Editor

Title>PR1:MFJ-9017 18-MHz QRP CW Transceiver
Author>Hale, Bruce S. - KB1MW
Source>QST Jul 1993, pp. 45-46
Abstract>Performance review of the MFJ-9017 transceiver. It was found to perform well.

Digest>MFJ Enterprises makes a line of QRP CW transceivers, each built for a single band from 40- through 15-meters. The author reviewed the model built for the 18-MHz. WARC band.

The rig is very small, only 2.5 x 6.5 x 7.25 inches (63 x 163 x 181 mm.) and weighs 1.8 pounds (0.8 kg.) Its power output is "more than 4-watts", CW only. Power requirements are 12-15 volts DC at 1 amp max (transmitting), and 50 ma. (receive). The rig is very simple. Its front panel has only 3 knobs: frequency, volume, and RIT. There is also a power switch and 2 LED indicators, for power-on and transmit. Optional extra features are a self-contained keyer and a 700 Hz.

bandwidth audio filter.

The reviewer states: "This is a well-designed, well-built radio. If you've got an older rig that doesn't cover 18 MHz., this is a great way to try the band (and QRP at the same time). If you're looking for a rig to take on your next vacation, think about one of the MFJ series."

Title>PR2:PSK-1T Satellite Modem and TNC
Author>Ford, Steve - WB8IMY
Source>QST Jul 1993, pp. 46-47
Abstract>Operational review of the PacComm PSK-1T Packet Modem and TNC. It was found to perform well in both satellite and terrestial operations.

Digest>The PSK-1T is designed for people who want to operate packet, both on earth and via satellite. Actually, PacComm has combined their models PSK-1 satellite modem with their Tiny-2 TNC into a single package. In fact, they have not rewritten their operating manual; with the unit, they supply two separate manuals, one for each of the two units the package contains. Details of installation depend upon the user's specific equipment; the installation instructions in the manuals are adequate.

In satellite operations with the 1200-bit/s packet satellites, Manchester FSK is utilized in their 2-meter FM uplinks and phase-shift keying (PSK) on the 70-cm. downlinks. The PSK-1T software presents a menu on the computer monitor and all controls can be operated through the computer.

The reviewer states that the unit performs very well on weak signals so that one can tune the satellite signal as soon as it appears over the horizon, and it usually holds the signal throughout the pass. He was able to connect with OSCAR 20 and communicate with it reliably using an uplink power of only 25-watts and an omnidirectional antenna.

After the satellite has passed, one can switch to terrestial packet by a command from the computer, or from a front-panel switch. The PSK-1t functions well on both HF and VHF packet and includes a personal mailbox on which others can leave messages.

In summary, the reviewer stated: "The PacComm PSK-1T is a good choice if you want to be active on terrestial and satellite packet, switching between the two in seconds."

Source>QST Jul 1993, p. 71
Abstract>Nets (short for "networks") are explained. The need for a net control station (NCS) to avoid confusion is emphasized.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:10,500 Miles of Mobile CW on a Motorcycle
Author>Brogdon, Al - K3KMO
Source>QST Jul 1993, pp. 21-25
Abstract>Operating Morse code while driving a motorcycle.

Digest>Mr. Brogdon, later to become Managing Editor of QST, relates his experiences during a motorcycle trip when he and his 14-year old son spent 32 days driving to Alaska and back. Mounted between the handlebars was the author's Kenwood TS-140 transceiver and a mobile antenna was on the rear of the 'cycle. There were two micro-switches on a small aluminum plate that was bolted underneath one of the hand-grips of the handlebars. They were used to actuate a keyer as he operated CW almost exclusively during the entire trip. He reports that he routinely drove 60-mph, keying at 30-wpm, while wearing gloves, and also keeping a log, sometimes during rain!

Title>GI2:An "Ocean Hopper" Reunion
Author>Barthel, Randy W. - KF8TV
Source>QST Jul 1993, pp. 54-55
Abstract>Nostalgia.

Digest>This article is a series of reminiscences by the author. At age 13, he built a Knight-Kit "Ocean-Hopper" regenerative receiver but did not go on to get a ham-license. 10-years later he again became interested and obtained a novice license. That time he built a

transmitter kit, the Ameco AC-1, and operated for a short time, but again drifted away from radio. Recently, 25-years later, he again became interested and is now operating CW on 80- and 40-meters.

Title>GI3:Amateur Radio's Most Rewarding Activity
Author>Morris, Gary - N6QAF
Source>QST Jul 1993, p. 56
Abstract>The joys of helping beginners.

Digest>This is a laudatory description of ham "Elmers"; i.e. the people who take the time to help beginners get started in amateur radio. The author emphasizes that it does not take a strong technical background for any ham to help a newcomer. He states that no pleasures of the hobby can match the thrill of watching a youngster grow in understanding and achievement, partially as a result of the Elmer's help.

Title>GI4:Ham Radio as a Second Language
Author>Huizinga, Pusun, WQ0U
Source>QST Jul 1993, p. 57
Abstract>A Korean-American woman relates how ham radio has helped her overcome some of her homesickness and also to improve her English.

> 73 de Bob w3otc@amsat.org

I assume you mean W5UN? I've not personally used this one, but it is
pretty good from what I've seen.

There is also a new program available from Paul, N1BUG, that also includes
spatial polarity calculations (not sure if SKYMOON does that or not).

Also, Dr. Michael Owen, (who is on internet by the way) has programs available.
His email address is: MROWEN%STLAWU.bitnet@CUNYVM.CUNY.EDU

There is also another public doamin program available from VK3UM. It is
available at one of the archive sites on internet, but I can't remember where
(sorry).

Hope this helps.

549. RS Sale on Handhelds ????

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-12 14:44:19 UTC
From: pruitt@hubcap.clemson.edu
Message-ID: <pruitt.766161859@hubcap>
Source record: 268489

I just received a flyer from RS and their 440 MHz and 2-meter FM transceivers are on sale for $228 and $188 respectively. A savings of approximately $70 off of regular price.

How do these products rate against others in price and quality? I am new to the HAM world and in the process of studying for my license. Any information on these and other comparable handhelds would be appreciated.

SB QST ARL ARLB031
ARLB031 ARRL Vanity call proposal

ARRL Develops Position in ''Vanity'' Call Sign Proposal

On April 9, the League's Executive Committee approved the recommendations of the Ad Hoc Committee on Preferred Call Signs in preparation for the ARRL's filing of formal comments in PR Docket 93-305, the FCC's ''Vanity'' call sign proposal. The recommendations were based on membership input solicited by the committee.

The committee feels that all amateurs should be eligible for participation in the program. A phase-in period and priority system of ''gates'' should be adopted to allow the Commission relief from the administrative burden expected from the heavy initial submission of applications, and to afford licensees the opportunity to regain lost call signs. Included in the first ''gate'' would be those who wish to obtain the call sign of a direct family member. Clubs with lapsed club licenses and call signs should be allowed to recoup those call signs in the first priority group. The second gate in the priority system would be opened to Extra Class licensees; a priority third gate would be opened to Advanced Class licensees.

The League will recommend that 1 X 1 call signs, such as K2A, be made available for limited duration special events of national significance.

A copy of the committee's complete report is available for an SASE from the Regulatory Information Branch at League Headquarters, and on electronic services including CompuServe, America On Line, Prodigy, and the ARRL Bulletin Board. It is also available by e-mail from infoarrl.org, or by FTP from oak.oakland.edu. The file name is ''93-305.rpt.''

''PACIFIC POWERHOUSE'' KATASHI NOSE, KH6IJ, SK

On April 7, 79-year-old Katashi Nose, KH6IJ, of Honolulu, Hawaii--one of Amateur Radio's best-liked operators--died from a severe stroke.

Nose, a famous contest op and DXer with a string of ham radio firsts and accomplishments, was also famous for patiently working and tutoring Novices on 15 and 10 meters.

KH6IJ, licensed in 1932 as K6CGK, was the first KH6 ham to qualify for the League's DX Century Club and Worked All States Awards. In 1952, he received his Amateur Extra Class ticket, the fifth US ham to do so.

For 56 years, Katashi wrote a newspaper column on ham radio for his local newspaper. He also wrote many articles for QST and other ham magazines.

Nose earned a bachelor's degree from the University of Hawaii in 1937, and a masters degree from Harvard in 1960. He is survived by his wife Matsuyo, daughters Elizabeth Nose and Frances McKenney, son Joseph, and a son-in-law, Michael McKenney.

Funeral services are scheduled for Wednesday, April 13.

Steve,

I still have a bug in that I cannot post to usenet.
Would you mind putting one out to get an address for V21AS.
Everyone says that's where to QSL V26AS, but V21AS is not
in the Callbook. The information below is even stranger!!!
Thanks.

Ed,
Well, I think you'd do fine with the 2SRA; I like mine. The
only fault with it is the puny audio. The tiny buttons may be a
problem, but there's not any real issue with the "coupling" of a rcvr
and the HT. Not really sure what you were getting at, but it works
fine.

555. Data transmission over radio

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-12 16:49:48 UTC
From: jr15@prism.gatech.edu
Message-ID: <2oejfc$ae8@acme.gatech.edu>
Source record: 268493

First of all, this is not directly related to amateur radio.
For this I apologize. But I figured that this group was most
likely to have the expertize I'm looking for.

I'm working on a project that requires the transmission of
geo location data from a mobile source to a base station. The data
rate would be slow, so nothing really fancy is required. I
understand that there are companies that provide this type of
service by satellite, but I'm looking for a simpler, cheaper
solution.

I had in mind some sort of modem connection to a business band
radio. Does anyone know of an off-the-shelf product that provides
an rs-232 connection to a laptop computer and connection to an
available business radio? Are there radio-modems available that
would provide the functionality in one unit?

In any case the solution will have to function in dense urban
environment with many tall buildings.

I would appreciate any comments or suggestions.

Thanks

Howard [hlb@li.loral.com] KE6DJL writes:

We will be taking a trip to Monterey sometime so I'm looking for
info on open 2m repeaters in that area. We will also be in Solvang
so info for that area would also be appreciated.

I can't help with Monterey, but assuming you are driving to Solvang, a good
2m repeater in the San Luis Obispo area is Questa Peak on
146.800 - pl 107.2, you can also try Cal Poly on 146.760 - pl 107.2.

Solvang has a repeater on 146.895 - no pl. Note that Solvang is in a
canyon, don't expect a lot of coverage from there.

South of Solvang try Santa Barbara on 146.790 - pl 131.8. Solvang is on a
point on the California coast that provides an effective line-of-sight
barrier to FM-VHF, so you are not likely to hit Questa from South of
Solvang, nor Santa Barbara from North of Solvang.

One I've heard is: Ham #1 is clear as a bell into the repeater. Ham #2 is popping in and out a lot and says, "I can't hear you very well. Maybe it's your antenna or something." {something is right!}

Another: Ham #1 and #2 are having a conversation on the repeater. Ham #3 comes on calling #4. This happens several times. Finally #1 and #2 finish their conversation. Eventually #3 and #4 get into a conversation. 3 says, "I've been calling you but you didn't answer. There must be something wrong with the repeater. I couldn't even hear it." 4 says, "I heard you. You were transmitting on top of someone elses' conversation. Maybe your volume was turned down." 3 says, "Yeah I guess they fixed the repeater. So you can hear me now." 4 says, "Yes I've been hearing you all along. For some reason you could not hear the repeater." 3 says, "Well good, the repeater's fixed now."

>>net, and my third listing is for McLean VA, would you know
>>who I am?
>
>As net control, I would say, "The station listing
>traffic for McLean, VA say your callsign only. Over."

Ah, but that requires the net control to make a followup
transmission after mine - a potentially unnecessary waste
of bandwidth if I had initially avoided doubling with the other
station by using the "here is <drop carrier>" technique.

This thread seems to be going in circles. John and others have
described a net call up technique where stations check in with only
their call and an indicator of "traffic/no traffic." That's fine.
In this case the "here is" is probably unnecessary and wasteful.

However,
there are other useful call up techniques !! Some have been described
by me and others in this newsgroup. They are hardly "heinous".
If you can't deal with the technique employed by a particular net, avoid it.

>
>It's called good operating technique, something which

until I see an official proclamation of someone being appointed
arbiter of "good operating technique" I'll keep an open mind.

ostroy@cbnewsh.cb.att.com (Dan Ostroy) writes:
>arbiter of "good operating technique" I'll keep an open mind.

Keeping an open mind is good, but "good operating technique"
is really based more on common sense than anything else. For a
net, "good operating technique" should mean handling the maximum
amount of traffic in the minimum amount of time, with a minimum
of wasted tranmissions, thereby CLEARING THE FREQUENCY AS SOON AS
POSSIBLE. Some of the things which impede this process are

a) Stations stepping all over one another during check-in,
requiring NCS to ask for rechecks;

b) Stations jumping in with relays without being asked by NCS
to act as relays;

c) Lengthy checkins, such as "Good evening to you, Bill, and
everyone on the net and hope you're enjoying the fine
weather this week and blab-blab-blab, etc." (Don't
laugh, it happens all the time!)

d) Etc., etc.; I'm sure everyone who's been following this
thread has their favorite.

Traffic nets exist to handle traffic - period. It is one of
the few facets of "amateur" radio which is most efficient if done
"professionally." Therefore, IMHO "good operating practice" on a
traffic net means running it like a professional (military, wire
service, maritime service) net. That may be hard for some folks
to swallow, but there it is.

Now, if the net is NOT a traffic net (like the SSB "activity"
or "propagation" or "DX" nets on 6 & 2-meter SSB, for example),
none of the above rules need apply unless NCS wants to (try to)
enforce them (lots of luck!).

My favorite was the two repeater users in Stockton on a local repeater. Ham 1 said "I wonder if we can talk to each other simplex?" Ham 2 " I don't know let's try" Ham 1 " How do we do it?" Ham 2 "Just hit the the reverse button." I eventually felt pity for them and helped explain how it worked for them and they were able to rech each other simplex but you really have to wonder how some people's minds work.

cheers,
dan

Nonsense. Many many machines and types of software that "participate in Usenet" don't have the ability to do this, as I explained. There is NO requirement to have any particular software to be part of Usenet.

And, as I pointed out, it's certainly possible to live with this practise. It merely wastes a little disk space for those of us whose software stores news messages this way.

> 1) you can fix your software

The software isn't broken. It works just fine. It doesn't have the latest refinements, but it's NOT broken.

> 2) you can stop participating

Not too bloody likely...

> 3) you can live with the problems
>
That's exactly what we were, and are doing. Please note, Brian, that my previous message wasn't a complaint about the practise, but an explanation to someone who didn't understand what the problem was.

Telling someone whose software works differently than yours that they need to get it fixed is rather overstating it. They just need to understand why their hard drives will fill up faster when people unnecessarily cross post articles, that's all!

After playing with both of these and the Icom and reading the QST review I
bought the Alinco DJ580T. It does most all of the things that the others
do, but it is cheaper and I found it easy to program and easy to modify.

Source record: 268627

An OH asked why PAY for SkyMoon when other EME prediction programs are free.

I'm certainly no expert on all the free programs (or SkyMoon for that matter), but some of the features I saw in Skymoon are:

Window-type display of the Moon on a chart giving the sky's noise temperature. Thus you can see what background QRN you will be fighting. I'm essentially certain that sky-temperature charts for all common EME bands are included.

Ability to go forward and backward in time at desired rates, or to jump to any date/time. I suppose all EME programs have this.

I vaguely think that there is a S/N predictor, given powers, beam gains and beamwidths, receiver bandwidth and noise tempertaure, etc, and the background sky temperature.

Being a window-looking program, it is more "exciting" to watch than a program which just listed numerical results (which it certainly gives).

Sorry for the convoluted English.

MID-ATLANTIC HAMFEST LISTING April 12, 1994

The following is a listing of known hamfests in the Mid-Atlantic area.
I will update this list as necessary. Please send any additions or
corrections to me at cps@access.digex.net so that others may benefit.

If you know of any hamfests not in this list, please let me know about
them so that they may be included in the next edition.

Thanks,

I have a Kenwood TH-27A and TH-28A that I would like to use
in Europe. Is it possible to Mod these radios to act like a
"E" version? I.e. generate a 1750Hz tone during transmit?
I don't care about switching back, since the radios
will be in Europe for about three years.

Thanks,
-Scott KD6ARS

577. Bearcat Scanner Memory Loss

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-13 05:29:22 UTC
From: johnr@soul.tv.tek.com
Message-ID: <2ofvvi$nu@news.tv.tek.com>
Source record: 268488

I've acquired an old Bearcat scanner, model 160. It seems to work OK, except that if I unplug it overnight, it loses it's memory. I replaced the batteries, but still no luck. I've measured 10ma of current flowing out of the batteries (two 9V cells in series) when the AC cord is unplugged. This seems high.

Is this a documented failure mode with old Bearcat scanners?

Thanks for any info,

John Reynolds NZ7J

578. Re: Any experience with doppler rdf (radio direction finders)?

In article <1994Apr8.220021.29409@Csli.Stanford.EDU> pkahn@Csli.Stanford.EDU (Philip Kahn) writes:
>I have been reading up on doppler RDF's. The Amateur Radio Handbook
>has an article that says they can only do well to about 5 degrees.
>Have you heard of systems or ways to do it that gives better results?

In 1976, I helped design the AN/SRD-22 doppler direction finder for Intech. The USCG specification was 1 degree resolution. 3 degree total variation over a wider temperature range. This is radically better than the typical Roanoak or Doppler systems design. This accuracy was achievable, but in my estimation worthless. Reasons to follow.

In order to maintain a stable phase shift from the antenna, through the receiver, and finally to the inevitable phase comparator, some compensation is required. The following are the basic error sources and the solutions required.

The antenna is 4 vertical tubes with pin diode attenuators (not switches) in series. These attenuators are driven in quadrature with a modified sine wave to give a low distortion diode resistance vs time waveform. Any distortion in the drive waveform cause errors at points BETWEEN quadrature points.

The largest cause of phase errors in the receiver is the IF crystal filter. The AN/SRD-22 uses a 4KHz drive signal where the 2nd harmonic and above (i.e. any distortion) ends up outside the IF crystal filter bandwidth. Slight changes in frequency yielded monsterous changes in phase shift through the filter. The receiver needed an automatic frequency control to insure that the ADF tones would always land on the same place in the IF xtal filter.

With weak signals, it was found that signal strengh affected the phase shift through the receiver. The final limiter and quadrature demodulator was the largest contributor. An automatic gain control was required to fix this.

The demodulated 4Khz tone was filtered after demodulation by a commutating filter. The initial bandwith was about 1Hz. Clock leakage and switching transients became a large source of errors. This required very carful board layout.

To give a rough approximation of the distortion requirements, 1 degree total accuracy is 1 part in 360 or 0.28% total error

or distortion. At 1Hz bandwidth, it may take 20 seconds to
obtain a stable reading.

The reason the Roanoak and Doppler Systems switched antenna
systems function is that the environmental sources of error
far exeed the instrument errors. A 130ft vessel or moving vehicle
is NOT a stable platform and is subject to errors induced by
ground or sea reflections, multipath, antenna tilt, polarization,
faraday rotation, mechanical damage, and multiple transmitter
sources. Any ONE of these can induce enormous errors. Multiple
transmitters (including intermod, garbage, grunge, rfi, emi,
computer noise, skip, etc) are the worst as they generate totally
false readings. Another major botch is the 0-360degree digital
display. Since the readings tend NOT to be stable, getting
an accurate bearing is like reading a digital watch that can't
decide what time it is. Error induced by drive waveform distortion,
signal levels, and such are reasonably small. There are other
problems introduced by switching type antennas, but they do not
affect the basic accuracy. Only the crystal filter errors are
large enough to justify an AFC. My guess is that +/-5 degree
overall accuracy for a fixed base is the best that can be expected.
+/-15 degrees is about the best for a mobile.

This technology is now 20 year old. Were I to do it today, I
would use DSP to filter and demodulate the tone, statistical
algorithms to reduce erronious readings, beam steering to deal
with reflections, adjustable filter bandwidth, and intelligent
display control.

SB SAREX @ AMSAT $STS-59.016
SAREX Keps 4/13 at 5:40 UTC

Greenbelt, MD, 4/13/94 at 5:40 UTC

The official SAREX element set at this time is GSFC-014. This element set was generated by Ron Parise, WA4SIR, of the Goddard Space Flight Center. Gil Carman, WA5NOM, reports that the predictions using GSFC-014 were 13 seconds earlier than GSFC-005 as of 18:00 UTC on 4/12.

The SAREX Working group has had several inquiries regarding the use of "older" element sets during the STS-59 mission. Daily trim burns are planned during this flight to keep the ascending node crossing to within 0.1 degree of the planned preflight Keps. Thus, for periods of time, some of the "older" keps are closer to the current orbiter state vector than the somewhat "newer" Keps. If you run a comparison of the various orbital elements produced thus far, they are all within 10 to 20 seconds of one another. Gil Carman reports that this same trim burn approach was used during the STS-9 mission which also carried Owen Garriott, W5LFL.

In article <1994Apr11.144914.25061@ke4zv.atl.ga.us> gary@ke4zv.atl.ga.us (Gary Coffman) writes:
>2) The higher the switching speed, the greater the doppler, and the easier
>small angle changes are to measure. So you want to use as high a switching
>rate as you can manage. This also relates to 3 and 4 below.

One problem with switching as opposed to sine wave driven attenuation is that switching creates a "comb line" of modulation spectra that extends well beyond the bandwidth of the crystal filter. Put differently, 33.3% of the energy in a square wave drive signal is in the odd harmonics of the fundamental. This results in signifigant spurious responses in the adjacent channel area. Doppler Systems used DG-MOSFETS with a "soft" switching characteristic to reduce these spurs.

One of the major reasons that amplitude based, rotating yagi or quad antenna direction finders are becoming popular is that they can seperate multiple carriers on the same frequency. Another advantage is that they can visibly show a false reflection or multipath signal. The doppler direction finders go insane when faced with multiple signals. Rotating quad do not have the aquisition speed of a doppler system, but potentially are a more accurate and better system.

If you are interested in maximum accuracy, I suggest a "Lorenz" style antenna system. This was used by the Germans during the Battle of Britain for guiding the bombers to their target. Two directional antennas were aimed in the general direction of the target. The two antennas had a -3db beamwidth of about 15 degrees and were aimed 15 degrees apart. A single transmitter was alternately tone modulated and switched between the two antennas. When switched to the left antenna, it would send morse "A". The right would be "N". The dots and dashes were inteleaved. If the bomber was exactly between the two beams, the signal strength from the two antennas would be identical and a continuous modulation tone would be heard. Any deviation from centre would cause the letter "A" or "N" to be heard depending upon direction. The beam was said to be 500ft wide at a distance of 100 miles on about 60Mhz. See "The Wizard War" by R.V. Jones.

A similar antenna derrangement could be constructed and rotated. Instead of generating the signals, the direction finder would be a sychronous antenna switch and AM demodulator. When the signal levels are equal, the carrier is half way between the antennas. The Intech AN-SRD/21 homer direction finder worked on similar

principles, but without a rotating or directional antenna. Instead
the entire vessel was rotated until the signals strengths were equal.
A 1 degree resolution was easy. However, mechanical considerations
prevented achieving this on a 43 ft vessel. +/-10 degree was typical
and adequate.

>A 4 pole antenna array only gives 4
>sample points to define the waveform. Theoretically that's enough, but
>it's easier with an 8 or 16 antenna array.

That's what I thought until I tried it. The problem is that the
"unused" (i.e. the elements that are turned off) get in the way.
A 16 element array worked just fine when both the transmitting and
receiving antennas were exactly vertically polarized. Tilt one
antenna slightly, and other elements acted as a polarization filter
and drastically reduced the received signal. In the "attenuator"
flavour of antenna (as opposed to the switched flavour), the
resultant distortion and noise was intolerable.

>4) The wider and flatter the phase bandwidth of the radio, the more precisely
>it will pass the doppler shift information on to the resolver.

True. However, the wider the IF, the better chance a signal on an
adjacent channel will mangle the readings.

>This latter is a problem when using typical ham receivers, so switch speeds
>are typically held down to 2 kHz or less for a 4 pole array. This corresponds

Nope. The reason is that the closer the tone is to the center
carrier frequency (i.e. lower modulation frequency), the less effect
the effects of the carrier being off frequency. Group delay
(phase errors) increases toward the IF filter band edges and
are flattest in the middle.

Another interesting method of direction finding is to use the
same technique as the satellite (forgot name) which monitors the
ELT (121.5Mhz) frequency. It uses doppler shift for locating.
The satellite follows an exactly known path. A transmitter on the
ground creates a doppler shift that changes from high to low as
the satellite passes. The rate of change during this transition
can be used to locate a line of position.

The same method can be done on the ground. I visualize a GPS
receiver into a laptop. The received signal and doppler shift
are measured exactly while roaring down the freeway. Increased
shift means you're approaching the transmitter. Decreasing means
you're going away. The carrier frequency, doppler shift, direction,
and speed are all known. The rest is number crunching.

Ugh. Back to taxes...

Both are negative, not easy to use although not difficult. For
scanner part, same as many other articles posted before, not
too bad but never expect too much from it.

The Monterey Bay Area PL on 2meters is 94.8

Try 146.970 and 146.665 or 146.790

There are other local repeaters in the area that the folks on the above frequencies will share with you. Always ask if anyone on frequency knows of a good repeater in the direction you are travelling. The locals always know the good ones...

Do Not be confused by all of the repeaters that you hear from the San Jose area...as they play in the Monterey Bay Area.

583. Working AO-21 with TH-78A

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-13 10:46:34 UTC
From: gosset@pbr322.ceingebi.unam.MX
Message-ID: <Pine.3.87.9404131034.B18692-0100000@pbr322>
Source record: 268519

Hello everyone,

I am interested in working AO-21 using the 435.015 uplink
frequency. However, I have a kenwood TH-78A and have not been able to
enter that frequency, the closest I can get is 435.0125. This is because
the freq. steps that can be selected on UHF are: 10, 12.5 20 or 25 kHz.
My questions are: can I work AO-21 on 435.0125?
How can I modify the TH-78A so it can transmit on 435.015?

Your answers to these questions and general comments about working
AO-21 will be greatly appreciated.
Hope to hear you on AO-21 soon!

The 2SRA is a great radio, but i\like most Icom HT's its not that intuitive to operate. The wideband receive side of the radio is totally separate from the 2m side, so there are no problems. Its like the W2A dual band except the 440 side is replaced with a 25-950 MHz receiver. Its performance is very good and has all the bells and whistles.

Many of the European transverter designs work with input levels as
low as -40 dbm. And the IC-735 is easily modified for higher output,
or a MMIC stage can boost the level to 1 mW easily. This level mismatch
shouldn't be a deterrent, but it is something you need to be aware of,
if you're expecting plug and play.

586. FluxGate magetometers

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-13 13:00:59 UTC
From: MOWE%SLUMUS.BITNET@CUNYVM.CUNY.EDU
Message-ID: <13APR94.08657853.0010.MUSIC@SLUMUS>
Source record: 268499

Friends -

A number of people have asked me to add a better means of determining antenna azimuth to my EME/satellite tracknig program, RealTrak. Currently, RT supports a bunch of A/D boards including several 12-bit boards... the user supplies antenna position via potentiometers and the A/D board figures out the azimuth/elevation. This is, however, not sufficiently accurate for *big* antennas because pots aren't very linear, they drift with temperature, etc.

I have solved the elevation problem by interfacing with the SmartLevel, a digital carpenter's level (0.1 degree) with RS-232 output. Slick!

BUT... what about azimuith? Optical encoders are one possibility, but they're a pain when the power goes off, plus many of them would require an interface board to the computer.

Some people have suggested using a fluxgate magetometer for antenna azimuith. Sounds like a good idea: you can "zero out" your support structure, it gives good reliability, even good accuracy.

The only propblem is the cost: $700 or so is the best that I have found. We need something like 1 degree accuracy (better if possible, of course), with RS-232 output.

So, does anyone out there have any leads? I'd be happy just to get a few manufacturer's telephone numbers and chase down the costs myself.

Thanks !

>to swallow, but there it is.

Maybe that's why some nets around here are called 'Traffic and Information Net'.
You can argue for all the professionalism you want, but the fact remains that we are ***amateurs*** and unless your checkin procedure is flexible enough for someone who hasn't checked in before, you'll still have the problems you're complaining about. Net control still has to ask a few checkins for fills, so doesn't 'good operating practice' imply that you should take into account the inexperienced operators?

And if you're in such a big hurry, there's always the telephone.

588. Final Report of the ARRL on Preferred Callsigns

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-13 13:58:46 UTC
From: marcbg@netcom.com
Message-ID: <$arlz0413.1994@ampr.org>
Source record: 268500
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,sbay.hams

Posted April 11, 1994

This file contains the Final Report of the ARRL Ad-Hoc Committee
on Preferred Callsigns

Committee Members:
Mr. Steve Mendelsohn, WA2DHF, Chairman
Mr. Frank Butler, W4RH
Mr. Tom Comstock, N5TC
Mr. John Kanode, N4MM
Mr. Brad Wyatt, K6WR

Executive Summary

The Committee was created by President Wilson to recommend a
response to the Board in P.R. Docket 93-305, the Vanity Callsign
proposal. The charter from President Wilson included a request
that member input be sought in the limited time before the March
7, 1994, filing deadline.

To accommodate this request Vice Director Rothberg and the
chairman conducted a survey of our respective divisions using
packet radio, mail and a request to newsletter editors to
reproduce the survey form for club input. Over 730 responses
have been received and tallied. Numeric results track with
anecdotal results seen in member letters to Headquarters.

The Board family has been especially helpful in forwarding and
recounting comments from the field. Directors Burden, Comstock,
Gordon, Heyn, Kanode, Lewis, Olson, Wyatt, Vice Directors
Brackob, (monitoring the discussion on CompuServe) Brown, Frahm
and Rothberg have forwarded member response by mail, through
Headquarters and electronically to the Committee.

Executive Vice President Sumner made members aware of the
Committee's work through an editorial and article in February,
1994, QST. EVP Sumner and VEC Manager Jahnke provided the
Committee with an excellent option paper on electronic submission
of license requests by various means.

Recommendations

1. Who Should Participate

The Committee recommends that the Board adopt the position that
all amateurs be eligible for participation in the program after

an initial phase in period.

While 7% of the respondents to the survey were against the program entirely and another 3.5% wanted to limit the program to General class and above, the majority of comments received welcome the creation of the program while recognizing that some method of initial filtering must be used to keep the FCC from being inundated with applications in the beginning.

2. The issue of Fees

The fee quoted in the Docket, $7.00 per year collected for the length of grant of license (10 years), was set by Congress in the Budget Reconciliation Act of 1993. To change the amount or type of fee would require the League to commit its efforts in the Congress toward changing the fee.

The Committee recommends that the League seek such relief in favor of a one time administrative processing fee with the understanding that no amateur licensee should incur a user fee.

There is no periodic processing expense related to this program after the initial look-up work has occurred. Labor involved with renewal of a Preferred Callsign will not differ in any way from the renewal of a non-preferred callsign, therefor the Committee believes no additional labor charge should be incurred by the licensee.

During the course of this proceeding people filed comments with the Commission asking why those with Preferred Callsigns have to pay recurring, yearly fees. The Commission's response may well be to ask that ALL amateurs pay such user fees. Without question, this would be viewed as an undesirable outcome to such a question.

Additional factors supporting the one-time administrative fee position include the time value of money and reduction in administrative workload.

The Government benefits by collecting the entire fee at the beginning of the process rather than on a yearly basis or at the end of the license term. The one-time fee concept would also greatly reduce the Commission's fee collection workload by not having to administrate an ongoing fee collection process at license renewal time.

3. Holders of previous Preferred Callsigns

The Committee recommends a statement that any callsign held prior to the start of this program shall be considered a sequential callsign and exempt from any administrative fee associated with this program.

4. Phase-in Periods and Priorities

The Committee recommends a phase-in period to allow the Commission a reasonable chance to process the expected heavy initial submission of applications.

Conversations with Commission Information Services staff in Gettysburg indicate that no additional application processing manpower will be used to work on Preferred Callsign applications. The same four people who process all new and renewal form 610s will be processing the new form 610-V as well. Therefore, a phase in period would be wise to prevent severe overload at Gettysburg.

Phase-in periods may be perceived as "gates". As each succeeding gate opens it will admit applications from a new group as well as any group allowed by a previous gate.

Gate one would allow applications from holders of previous callsigns who have lost their original call through failure to renew at the proper time or having moved from one location to another mandating a change of callsign. A callsign could be recovered even if it did not match the applicants current permanent address.

Included in this group would be those who wish to obtain the callsign of a direct family member. The term direct, as used here, would only include a brother, sister, spouse, son or daughter of the original licensee.

The Committee recommends that clubs with lapsed club licenses also be allowed to recoup those callsigns in the first group.

The second gate would include all Extra Class licensees and those enfranchised by gate one.

The third gate would include all Advanced Class licensees and those enfranchised in gates one and two.

At this point the system would be thrown open to anyone else desiring a Preferred Callsign.

5. Club Applications

Clubs wishing to obtain the callsign of a silent key member could do so in the second gate period if the trustee of the club were an extra class licensee. This should present no problem for most legitimate clubs. Similar logic would apply to trustees with other classes of license.

The Committee believes family members should have first choice of a silent key's call. Should no family member desire the call, the club should have next choice.

It is been the League position that the number of members of a club be raised to at least 4 for a group to be considered a "radio club". This proceeding again emphasizes the need for the

Commission to raise the number of members needed to ensure legitimacy and prevent fraud.

The League's Part 97 Rewrite Committee suggested raising the number of members required in Part 97.5(d)(2) from two to four. The Committee recommends this proceeding be used as an opportunity to restate that position.

The Committee recommends that, for purposes of defining a legitimate club in Part 97.5(d)(2), the number of members be raised from the current 2 to at least 4.

6. Vacated Callsigns

As proposed in the NPRM, a call is considered "vacated" when its previous owner has been assigned a Preferred Callsign. The Commission would put the vacated call into the available pool immediately. The Committee believes this could lead to many problems. As an alternative...

The Committee recommends that the vacated callsign not be reassigned for a two year period.

Incoming QSL bureaus, especially, have noted that many services count on the user callsign being correct. An instant reassignment of a prior held call to a new licensee could cause multiple problems for volunteer service groups, such as the bureaus.

Another consideration is "trafficking in callsigns" The Committee believes that a two year hold on a vacated callsign would preclude questionable practices arising in which one amateur would persuade another to change their call so the first amateur could acquire the desired call. This practice could open up a new area of fraud allowing people to submit questionable documents showing that amateur B wanted to give up a call so amateur A could acquire it.

7. Number of Choices on Form 610-V

The Committee recommends that the number of choices be increased to 25.

This should reduce processing and correspondence time if the 10 requested callsigns are all unavailable. The applicant need not fill in all 25 callsigns, but it would increase the chance of a positive match if the applicant had 25 choices.

8. Retirement of Callsigns

A small number of commenters stated the belief that re-issuance of callsigns of silent keys would be somehow disrespectful. The Committee does not share this viewpoint.

While the Committee was sensitive to the fond memory the silent key's friends might have, the callsign is really the "property" of the Commission and is part of the condition of grant to the licensee. In essence it is "loaned" to the licensee for the term of the license. It would, therefore, become eligible for re-issuance once the renewal grace period had expired.

If an individual passed away just before license renewal time it would be at least two years before the callsign became available for re-issue at the end of the renewal grace period. A more probable condition would be that the licensee would pass on in the middle of the license term. Then the callsign would not become available for between four and seven years after the amateur passed on.

Should an individual, club or group think highly of the deceased, nothing precludes finding an inactive ham and asking the individual to change callsigns by requesting the silent key's old callsign through this program.

9. Out of Area Callsign Issuance

The Committee recommends that within the lower 48 states the Commission continue issuing callsigns with the number within the callsign relative to the applicants current permanent address. This recommendation would be for Preferred Callsigns as well as sequentially generated callsigns.

A quick historical retrospective is in order at this point. One of the original reasons for breaking the continental United States into ten callsign districts was to help the FCC's Field Operations Bureau begin to locate an emitter for enforcement purposes.

Today's state-of-the-art direction finding does not need to know which callsign district the emitter is located in. This fact was part of the rationale the Commission used in eliminating the requirement for a licensee to sign "portable" when away from the licensed station location. Therefore, the Commission doesn't appear to care whether the a licensee has a district indicator consonant with the operators station location.

However, anecdotal evidence in letters and on survey forms indicates that, contrary to the Commission's technological needs, most amateurs have grown accustomed to the practice of callsign numbers indicating which area of the country the licensee is in and would like the tradition continued. The callsign number gives the operators on each end of the circuit an immediate indication of where the other is and "in which direction to turn the beam."

Therefore, the Committee recommends this tradition of issuing callsigns with the number within the callsign consonant with the applicants current permanent address be continued.

10. Outside of the Continental United States

Amateurs in Alaska, Hawaii, Puerto Rico, the American Virgin Islands and in the Pacific have shared their concern with Directors Wyatt and Butler about amateurs being able to acquire callsigns from their area without being a current permanent resident. This is a valid concern because in some areas, notably Hawaii, the KH6 callsign block is nearly gone. Most of it has been assigned to visitors and those who are now deceased.

While the re-issuance of callsigns of deceased amateurs will ease the problem, the Committee recommends that outside the continental 48 states applicants be required to furnish the Commission with some form of documentation indicating permanent residency. Visitors would continue to use the portable designator, thereby not depleting a callsign pool available only to permanent residents.

11. Specific Comments on the NPRM

New 97.19 (c) Substitute the following:

Each request for a renewal of a operator/primary or club station license retaining a call sign assigned under the vanity call sign system shall be made on FCC form 610-V. The form must be submitted [eliminate "with the proper fee"] to the address specified in the Private Radio Services Fee Filing Guide. To renew the license without retaining a vanity call sign, the applicant must use FCC form 610 as specified in Section 97.21.

New 97.19(f)(3)

A call sign that is vacated by the licensee is [add "not"] available to the vanity call sign system [add "for 2 years following the expiration of the license"].

Sentence Added to the end of 97.19(g)

A callsign previously held by the applicant, available to the vanity callsign system but expired, may be requested without regard to license class group or current permanent residence.

New 97.19(g)(1)

The applicant must request that the call sign held be canceled and provide a list of up to [change 10 to 25] call signs in order of preference. The list will automatically end with the call sign vacated as the [change "tenth" to "twenty sixth"] choice.

New 97.19(g)(2)

The first available call sign from the applicant's list will be assigned. When none of those call signs are available, the call sign vacated by the applicant will be reassigned [add "and the administrative fee returned".]

New 97.5(d)(2)

A club station license (FCC Form 660) issued to the person by the FCC. A club station license is issued only to the person who is the license trustee designated by an officer of the club. The trustee must hold an FCC-issued Amateur Extra, Advanced, General or Technician operator license. The club must be composed of at least [change "two" to "four"] persons and must have a name, a document of organization, management and a primary purpose devoted to amateur service activities consistent with this Part.

12. Questions Posed in the Discussion Section

In paragraph 5 the Commission asks about alternative ways to file form 610-V.

The Committee recommends that the same, simple, ASCII format used in League contest filings be recommended to the Commission IS group as a starting point for electronic filing

In Paragraph 6 the NPRM requests comments on distribution of available callsign information.

The Committee recommends that a League computer and modem, or HIRAM be made available, in the short term, as a distribution method with the Commission filing at least weekly updates or sending a disk or disks detailing callsign availability.

Alternately, for-profit data services, such as Compuserve's Hamnet forum, could be used by the Commission to make current callsign information available.

13. Special Event Callsigns

The Committee recommends that 1 X 1 callsigns, such as K2A, be made available for limited duration special events of national significance.

There are likely to be few special event stations of national significance operating at any one time within a single call district. Therefore, the issuance of a 1 X 1 callsign should be possible without measurably adding to the Commission's workload.

14. Final Comments

The Chairman would like to thank the Directors Butler, Comstock, Kanode and Wyatt, EVP Sumner and VEC Department Manager Jahnke for the hard work they did in such a compressed time period.

A statistical treatment of the data used to derive the Committee's position will be sent as an enclosure to this report.

Respectfully Submitted,

Stephen Mendelsohn, WA2DHF, Chairman

I bought checks from one of those coupons in the Sunday paper. They
printed my call right after my name AND put a slash in the zero!!!

I don't know why I'd put an ARRL logo on 'em, I rarely write checks to hams.

>or a MMIC stage can boost the level to 1 mW easily. This level mismatch
>shouldn't be a deterrent, but it is something you need to be aware of,
>if you're expecting plug and play.

Ah, yes, that's the key phrase: "Plug and play." Many newer hams
expect to be able to just do exactly that, without worrying about levels
or anything else. DEM told me once that they get a lot of calls asking
"Can I just plug my Suribachi JAT-1500 into your 432 transverter?" and
their answer is usually something like "Well, what's the output level?"
which is met by silence on the other end.....Part of the problem may be
that companies like DEM assume that anyone wanting to play at weak-signal
VHF/UHF/SHF is technically knowledgeable enough to figure out how to
interface, how to do T/R switching, etc., when in fact many hams are
viewing these "specialty kit" suppliers as extensions of the OEM, which
is definitely NOT the case. Perhaps the advertising should reflect that.

BTW, the North East Weak Signal Group is having a meeting this
Saturday in Vernon, CT, at 1:00 PM, at the Quality Inn just off I-84.
The topic of the technical presentation is - you guessed it - interfacing
commercial hf transceivers to VHF/UHF/SHF transverters, and I am told
that many of the most popular models (including the IC-735 and other
Icoms, Kenwoods, Yaesus, etc.) will be covered. Contact Ron, WZ1V,
for info (sorry, don't hve his address or telephone #, but he's in
the Callbook).

Tennessee Technological University
QRP Expedition
TTARS-WA4UCE

The QRP expedition is this weekend April 16, 17. So far looks like the Yaesu 301S and the MFJ 20 meter SSB travel radio are definites, as well as testing out a MFJ Super HI Q loop and a ZS6??? multiband dipole (variation of a G5RV that seems to perform better).

The two main purposes of the expedition are to foster interest in HF with the college hams here in Cookeville, and to demonstrate the effectiveness of low power operation with SSB, even with portable battery operated setups.

We will be operating from Fall Creek Falls state Park in the south central part of Tennessee. We will be setting up one base station from a campground and another portable operation that will go to some remote sections of the park.

For a nice certificate send a 9X12 SASE with QSL card and contact number to:

I know someone who called himself the "Emily Post" of good operating
habits on a local repeater. Will he do?? I'd say who it was, but
only Vermonters would understand the humor.

I will often use the reverse funtion to tell if another amateur is
within simplex range while he/she is transmitting. That's a perfectly
valid way of determining whether simplex is an option. Holding a
conversation on the repeater output however is definitely questionable
behavior.

PS.. The only arms that Slick and Tonto want you to keep are the ones
attached to you at the shoulder.

Greetings

If you have some 'long-haul' paths for tee-vee or FM for that matter, then you will find that a rhombic antenna will do what you want for a very modest cost (probably less than $10).

I used a design that had 55 feet per leg and spacings of 33 and 105 feet along the short and long directions (the long direction pointed at the station 2b received. I lived 50 miles north of 'frisco' and west of Santa Rosa, CA and it worked very well for the SF stations.

There are many many sources for rhombic designs (ARRL handbook, etc) so you can, as Joe-Bob Briggs says - 'Check it out'.

Good luck

A really nice (IMHO) net practice used to be (still is?) the Penna. CAP HF net (was 4464.5, now 4582.0? 1700-1800 EST). The state is divided into geographical "groups" (which are administrative entities outside of radio nets, which I suppose makes life easier) where the Big Net Control would acll down a list of groups (Group 10, 20, &c) for a group control station, who would then call roll and report back to the Big Net Control, who would then tell stations, in priority and then group order, to pass traffic. Roll call for ~~40 checkins was about 10 minutes long. Of course, being CAP, it had that certain miliary je ne sais quois which kept everything in order. As well, each group had maybe only 3 or 4 checkins, making the likelihood of stepping small.

Oh, by the way, CAP Radio Operating Procdedure had each station say (e.g.) "This is Keystone 107 {no traffic, n routines, n priorities} over". A group control station might be called:

"Group 100 control, this is Keystone 18, call your roll, out."

(me) "This is Keystone 107, no traffic. Group 100 stations, this is Keystone 107, over"

(stations in order "this is keystone so-and-so...over")

"This is Keystone 107, roger Keystone so-and-so, ... Out. Net control, this is Keystone 107, roll call complete, over.

"This is Keystone 18, roger Keystone 107 no traffic and roll call. Group 1100..."

and so on.

(CAP has a fleet call beginning with K for each "large" administrative unit--something like KGC 465 but the PA fleet call has changed recently, and they use "tactical" word call-signs like Keystone, and so forth)

Some organizations design special checks and then provide the design to a check printing company, along with a list of their members. The check company offers to sell the checks to the members. There is very little expense to the organization, and they benefit from the exposure.

We really do need to foster a positive impression of amateur radio if we hope to overcome difficulties such as antenna covenants, etc. I think this is something that the ARRL should persue. ARE YOU LISTENING, ARRL?

>checkins for fills, so doesn't 'good operating practice' imply that you
>should take into account the inexperienced operators?

Of course, the NCS should be flexible and accomodating to the new checkin. But, since traffic nets which handle formal written traffic as part of NTS are *directed* nets, it means that some set of *rules* is probably necessary to ensure the *expeditious* handling of traffic. Remember that many hams who check into these nets are experienced traffic handlers who check into SEVERAL NETS A NIGHT; they haven't the time to hang around for a couple of hours while time is wasted with disorganized checkin or traffic-listing procdures. The Virginia Net (VN), for example, is usually on the air LESS THAN 15 MINUTES and handles all it's traffic (it's a CW net). The Virginia Late Net (VLN), which is SSB, isn't quite as efficient but a half-hour session is running a bit long. These two examples are *traffic* nets, and that's all.

Another point: Before checking into a net, *good operating procedure* dictates that the newcomer spend a couple of sessions *listening* to the net BUT NOT CHECKING IN, so he/she can *learn* what the proper procedure is. The same procedure is also good at other times, like *listening* to the DX station in the pileup BEFORE jumping in, so you know how he/she is handling the callers, where he/she is listening for replies, etc.

I have nothing against traffic and information nets, or information nets, or just plain old BS nets. There used to be one called the "Graveyard Net" on 75 meter 'phone (AM, that is) which a) typically lasted 2-3 hours per night; b) had very little in the wy of procedures; c) refused to acknowledge anyone trying to check in on SSB (or "slop bucket," as it was popularly known in the late '50s); d) refused to accept traffic. A "fringe" example, or course, but they do exist. Nevertheless, *procedures* are useful things in many kinds of nets; the "Bicentennial WAS Net" on 75 in 1976 had very definite procedures even though it was NOT a traffic net, and you could find yourself being "persona non grata" very quickly by not playing by their rules.

Radio communication is a combination of art, science, and inter-
personal relations. Licensed amateur activity in the U.S. has it's
rules, set by the FCC, and its "good operating practice," which is
based on a combination of common sense, experience, and courtesy.
Those who wish to regard it as some inalienable "right" which can
be practiced however the individual chooses are misguided; never
forget that the ONLY REASON the Amateur Service (note carefully
the word "Service") exists is that the government, through the FCC,
find that it is "in the public interest." Traffic nets exist
primarily to train amateurs in the proper handling of traffic
so that during an emergency they can once again, indeed, show the
FCC and the world their "professionalism" in dealing with life or
property-threatening situations.

A ham license is like a driver's license in that it is a
granted privelige, not a "right." That means that it carries with
it a certain responsibility. Those unwilling to accept that premise
should - as suggested - use the telephone.

.>
.> Karen deWeeger (kyd@EBay.Sun.COM)
.>
.> (:>

I'm not familiar with the BSB service in particular, but SCA stands
for sub carrier authorization. This means that program material (be it
BSB material, Muzak, Stock Quotes, Traffic Alerts etc.) is transmitted on
the same carrier as the main program material by means of modulating it
onto a subcarrier.

A receiver without a SCA decoder will never notice that the extra
material is being transmitted. The subcarrier frequencies vary with the
particular station and service but are in the range of 40 kHz to 80 KHz usually.

So to answer your basic questions:

They are broadcast on standard FM broadcast stations, so if you can
receive the normal programs, most likeley with an appropriate
receiver you should be able to get the SCA stuff too.

A wideband receiver (like your 25kHz to 2GHz unit) will be usable
to receive the SCA broadcastd only if it has a SCA decoder
attached to it. (Most receivers do not come standard with such
circuitry)

The SCA program material is not "encoded" in the sense that it
is encrypted or anything like that, but you need the appropriate
demodulator to hear it.

Although it is possible to get a generic SCA decoder and interface it to a receiver and align it to the proper subcarrier frequency, in your case it would seem likely that it would be simpler just to get the BSB receiver from SF and go that route.

Good Luck,
Ray Anderson WB6TPU

602. Katashi Nose, KH6IJ, 1916-1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-13 16:08:27 UTC
From: jeffrey@kahuna.tmc.edu
Message-ID: <Co7Gu4.oE@news.Hawaii.Edu>
Source record: 268514

It is with deep regret that I inform the amateur community on here
that the well-loved Katashi Nose, KH6IJ, passed away.

The following newspaper article appeared in the Honolulu-Star Bulletin.
Please forgive the length of this article.

In his 60 years on the air he was truly an ambassador to the world for
amateur radio.

Jeff NH6IL
****

KATASHI NOSE, KH6IL, DIES AT AGE 78

The former UH professor wrote a radio comumn for many years.

By Harold Morse, Star-Bulletin.

Katashi Nose, Star-Bulletin radio columnist for 50 years and a
retired university of Hawaii physics professor, died Thursday
in St. Francis Hospital. He was 78.

A longtime ham radio operator born in Honolulu, who won a number
of awards, Nose learned the Morse Code overnight in 1931 and
qualified as an operator in 1932. He made his own radio set from
odds and ends that same year.

His radio activity got him locked up for having radio equipment
at his home for a class he was teaching at Kauai High School at
the time of the Pearl Harbor attack. He was released 10 days later
after notable people, including Joseph Farrington, territorial
delegate to Congress and Star-Bulletin publisher, vouched for him.
Both his parents worked for the Farrington family.

Daughter Elizabeth Nose recalled that although her father was
always busy, he still had time for family.

``Whenever possible, he'd always take his family with him on
his travels,'' she said.

Daughter Frances McKenney said: ``My most vivid memory of him is how
he hand-carried me thrugh my math and science courses when I was
in high school.''

Her father was a celebrity in the ham radio world, she said. ``When
we would go to Japan, for example, there would be a whole group
of hams meeting him, and I remember they met him at the airport
with a miniature antennae. This was in Japan.''

Nose's ham activity helped in rescues at sea and enabled him to communicate with other operators in 365 countries, using his call letters, KH6IJ.

He said his greatest thrill was to hear his voice bounce back the the word ``one'' in one-third second from a satellite 53,000 miles up. He was using bargain-basement equipment he put together at the University of Hawaii while teaching there.

A UH graduate, he earned a master's degree at Harvard on scholarships and did graduate work at Stanford, also on a scholarchip.

He taught radio, science and chemistry and a class of gifted students at Kauai High School, and made extra money doing radio repairs before moving to the University of Hawaii in 1962. He later designed, built and installed PeaceSat ground terminals in Saipan, Fiji and American Samoa.

Nose suffered a stroke in March 1979 and retired from the university, although he continued to produce his column. He was very determined and made a real comeback from his stroke, his family said.

He wrote his final Star-Bulletin column early last year. His first had appeared in 1936.

By the 1970's, the column, ``With Hawaii's Radio Amateurs,'' had become the newspaper's longest-running continuously published column (with a break during WW II years). Nose also wrote numerous articles for amateur radio magazines with international circulation. Honpa Hongwanji Hawaii Betsuin [a Buddhist association. J.H.] named him a ``Living Treasure'' in 1985.

Nose is survived by wife Matsuyo; son Joseph; and his two daughters.

There will be a memorial service at 8 p.m. Wednesday at Hosoi Garden Mortuary. Casual attire. No Flowers.

I recall working Katashi a few years ago on 15. A real nice guy to chat with.
He'll be sorely missed.

611. FM Broadcast as a freq. ref.

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-13 20:00:56 UTC
From: hellman@cbnewsm.cb.att.com
Message-ID: <Co7rLo.5o8@cbnewsm.cb.att.com>
Source record: 268525

Recently Gary (I hope my memory is correct) commented that fm stations
may be assigned frequencies as much as 10 KHz away from the standard.
I have a stereo rcvr (mainly used as an amp) that displays to 50 KHz.
It has always been "off" by that much. That is, stations are tuned in for
best reception when the display reads 50 KHz away from the published freq.
There's nothing in the service manual that gives an alignment solution.
The rcvr has a pll ic and a uP control with clock and counter built in.
The manual speaks of offset diodes used depending on the color of the
ceramic filters, but the schemetic doesn't show them.
Anyone have any experience with these things to discuss this via e-mail?
This has been on the back burner for years, ignoring that digit has been
sufficient.

tnx Shel WA2UBK dara@physics.att.com

I'd certainly second the above, but also note that the local traffic nets are generally viewed as "training" nets; they do exist to get the traffic-handling job done, but also to give the newcomer a chance to hone their traffic-handling and general net skills before advancing to the "big-time" (regional nets, etc.). As such, it is a good idea for the net control to spend and extra minute or two, just after checking for emergency or priority traffic (and possibly after getting the liason from the "big net" checked in) to go over the expected procedures.

I used to be one of the net controls for the Northern Colorado Traffic Net (which is hosted by the NCARC repeater in Ft. Collins, on 145.115), and still check in occasionally. The procedure I was taught to use as control still seems to be pretty much in use; we'd do it something like this:

"This is KC0EW calling the Northern Colorado Traffic Net; any stations with emergency traffic, please call now."

And after a sufficient pause, and calling for the check-in of our liason, we'd always do something along the lines of:

"KC0EW, net control for the Northern Colorado Traffic Net. This net meets nightly at 8 PM, for the purpose of handling traffic into and out of the Northern Colorado area. All stations, with or without traffic, are invited to check in and participate regularly on this net. When checking in, please state your call, your name, your location, and whether or not you have traffic to pass; if you have traffic for destinations outside the Northern Colorado area, please list it as "TWN" for "Twelfth Region Net". Any stations wishing to check in, please call now...."

Your mileage may vary, of course, but the point is that for such "beginner's" nets, there should be no need for the newcomer to have to listen very long to catch on to what's happening; he or she can be given sufficient info to get checked in - and thus feel like they've "made it" - right up front. Net control should, of course, be aware of who the newcomer is, and not start out routing a dozen messages to them; you might, on the other hand, route a couple via your "old hands" and then let the newcomer handle one, if time is available. The biggest hurdle to overcome is to get that person *involved*

and feeling like they're participating. THEN they've got some motivation to learn all the ropes.

I am looking for a design of a cheap, simple PL tone generator to put on an older, crystal controlled 2 meter mobile rig. Using different tx and rx crystals, I can get the 600 Khz offset for a repeater, but I need a PL tone generator to open the repeater. All suggestions appreciated.

Thanks,

Andy KD6WXM

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 13/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 13 APRIL AND FORECAST UP TO 16 APRIL

IPS Warning 10 was issued on 31 March and is still current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 074/011

1B. SOLAR FORECAST
14 April 15 April 16 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 12 April
Learmonth 21 2343 4444
Fredericksburg 20 23
Planetary 20 25

Observed Kp for 12 April: 5553 3344

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
14 Apr 22 Unsettled to active.
15 Apr 15 Unsettled.
16 Apr 10 Quiet to unsettled.

2C. MAGNETIC COMMENT
None.
3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

13 Apr normal fair-normal poor
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
14 Apr normal normal poor-fair
15 Apr normal normal fair
16 Apr normal normal normal
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were depressed 15-30% until 07UT, near normal
thereafter.

Observed T index for 13 April: 20

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
14 Apr 40 Near predicted monthly values.
15 Apr 40 Near predicted monthly values.
16 Apr 40 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
None.

I played with this sort of radio some years ago, and remember that the
PLL circuits would divide down the local oscillator (used to hetrodyne
the station's carrier to the IF freq, 10.7MHz) and count out the cycles
of that and use a crystal based osc for the timing reference. The
system would count out X cycles per Y cycles of reference cycles,
Y usually a fixed value, and X would be compared with the expected
value for the frequency in the band you told it to tune to + 10.7
Maybe that reference is off frequency a bit. 50KHz out of 100 MHz is
around what, 500 ppm, crystals should be better than that, but maybe
there is a trimmer cap you can tweak up. Crystal is probably around
4MHz, or sone such number.
Hope this helps:wq

Howdy,

***** Here is another request for the FT-530 mod. *****

I know it's been beat to death on this group and I previously had it
promised to me by a friend, but he lost his information.

So, I'll appreciate your help.

Please reply to me at

derry@nextwork.rose-hulman.edu

or J. H. Derry
810 S. 34th Street
Terre Haute IN 47803

Thanks in advance.

GL es 73 de Jack, K9CUN

One more reminder to all:

There are MANY, MANY mods available on the Boston Amateur Radio Club's
ham radio archive area on oak.oakland.edu:/pub/hamradio/mods

The directory structure breaks down from here according to manufacturer.

See the 00-Index.txt file in /pub/hamradio

Hope this helps. :)

73,
Scott, WY1Z

!!END-DATA!!

NOTE: The Effective Sunspot Number for 12 APR 94 was 13.9.
The Full Kp Indices for 12 APR 94 are: 5- 5- 5- 3o 3+ 3- 4- 4-
The 3-Hr Ap Indices for 12 APR 94 are: 37 38 37 17 17 14 24 21
Greater than 2 MeV Electron Fluence for 13 APR is: 2.5E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7700 (N09E07)
grew slightly in white light, and now shows a modest degree of
magnetic complexity. Little activity of any significance was
reported during the period.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field was at unsettled to minor storm levels.
The greater than 2 MeV electron fluence was very high.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled to active the next 24 hours,
signalling what should be the end of the disturbance that
began 01 April. Strictly unsettled conditions will close
the interval.

Event probabilities 14 apr-16 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 14 apr-16 apr

A. Middle Latitudes
Active 30/30/15
Minor Storm 20/20/10
Major-Severe Storm 10/10/05

B. High Latitudes
Active 25/30/30
Minor Storm 30/20/20
Major-Severe Storm 05/10/10

HF propagation conditions were below-normal over all
regions. The long-awaited improvements in propagation should
begin to be observed over the next 24 to 48 hours. However,
high and polar latitudes can still expect periods of minor
signal degradation, particularly during the local night
sectors. All regions can expect below-normal MUFs due to the
weak state of the ionosphere and low level of solar ionizing
radiation.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

NOTE: The Effective Sunspot Number for 11 APR 94 was 15.2.
The Full Kp Indices for 11 APR 94 are: 4+ 6- 6- 5+ 4- 3+ 3+ 4+
The 3-Hr Ap Indices for 11 APR 94 are: 34 62 66 55 25 20 19 35
Greater than 2 MeV Electron Fluence for 12 APR is: 2.3E+09

SYNOPSIS OF ACTIVITY

Solar activity continues very low. Region 7700 (N09E20)
is the only spotted region visible.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field varied from quiet to minor storm levels.
The most disturbed periods occurred during local nighttimes.
The greater than 2 MeV electron fluence was at high levels.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly active early, then calm to generally
unsettled conditions by the end of the interval.

Event probabilities 13 apr-15 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 13 apr-15 apr

A. Middle Latitudes
Active 35/30/25
Minor Storm 25/20/10
Major-Severe Storm 10/10/05

B. High Latitudes
Active 40/30/30
Minor Storm 30/20/20
Major-Severe Storm 15/10/10

HF propagation conditions continued to be well below
normal over most regions. High and polar latitudes continue to
see periods of poor to very poor propagation. All regions are
experiencing depressions in MUF by about 30 to 40 percent.
Gradual improvements are expect on 13 or 14 April over the
lower latitudes. Higher latitudes will likely require
additional days to recover from this disturbance. Recurrent
night-sector substorming will continue to produce periods of
minor signal degradation over the high and polar latitude
circuits.

NOTE: The Effective Sunspot Number for 10 APR 94 was 12.0.
The Full Kp Indices for 10 APR 94 are: 5- 5- 4- 5- 5o 4- 3+ 4-
The 3-Hr Ap Indices for 10 APR 94 are: 44 38 25 39 51 23 17 25
Greater than 2 MeV Electron Fluence for 11 APR is: 9.6E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7700 (N10E34)
evolved to be a stacked bipole, but has been quiet. New spots
may be emerging in the western hemisphere near N18W40.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has varied from unsettled to major
storm levels, with the most disturbed periods occurring
during local nighttime hours. This lingering disturbance is

thought to be due to high speed solar wind emanating from
the southern polar crown coronal hole. The greater than 2 MeV
electron fluence is again at very high levels.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly active for the next 48 hours, with
intervals of minor to major storming at night. April 14 should
see predominantly unsettled conditions.

Event probabilities 12 apr-14 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 12 apr-14 apr

A. Middle Latitudes
Active 35/35/25
Minor Storm 25/25/10
Major-Severe Storm 10/10/05

B. High Latitudes
Active 40/40/30
Minor Storm 30/30/20
Major-Severe Storm 15/15/10

HF propagation conditions continued well below normal.
Improvements are now not expected until 13 or 14 April over the
upper-middle to polar latitudes, but should begin recovering over the
lower latitude regions over the next 24 to 48 hours.

I have just recently acquired a Kenwood TM-2550a with a bad display. Meaning that only the S-meter works on it. Has anyone else had this problem, and can it be corrected cheaply.

thanks

What I said.

Re Wizard War, those arrays were *huge* fixed arrays to get the
necessary narrow beam. I don't think they'd be much use in a car.

>Another interesting method of direction finding is to use the
>same technique as the satellite (forgot name) which monitors the

>and speed are all known. The rest is number crunching.

Your car must be faster than mine. The SARSAT is moving at 5 km/s
to get that doppler. Poking along at 0.027 km/s, I'm not going to
generate much doppler shift at 2 meters, fractional Hertz. That's
not going to pass through a typical amateur receiver, nor are typical
PLLs that stable.

Any system that won't work for that bane of the repeater owner, very brief bursts of interference that kerchunk the machine, isn't going to cut it as a mobile direction finding technique. The switched doppler displays do work for that case, giving at least a general bearing on the rosette. Mechanical arrays aren't generally quick enough to catch the burst, and any system that depends on a continous pure carrier is out the window. (Typically the offender is going to be a late model Motorola repeater that keys while the PLL is still sweeping into lock. Hunting them down seems to be a regular passtime around here.)

Gary

Katashi Nose - The name brings back memories
of a lifetime of ham radio. The first QST
articles of his that I remember were before WW2.
I was a teenager and thought his name was pronounced
like the proboscis on my face. :-)

I never had the pleasure of working him on the air, but
will always remember his articlesw. I , for one, will miss him.

My condolences to his family and friends.

I have recieved this explanation a number of times and it is a good thing. Delphi does work that way too. THe only problem with delphi is that many are using the same program that I do to give them an offline capability for usenet and the local forums. That program get the news directly from the news data base and it does not do anything to the .newsrc file which means mulitple reciept for the users. It also does not permit crossposting and that can mean multiple post although I think few do that. I am trying to get the author to implement crosspost. Perhaps in another version.

> There is also a new program available from Paul, N1BUG, that also includes
> spatial polarity calculations (not sure if SKYMOON does that or not).

I know polarity comes in positive and negative. How does this affect radio
propagation? How is the polarity of space computed?

(Or do you mean polarization? .... as in antennas and radio waves ....)

It is not updated unless someone donates the CD-ROM. There is another calssign
server that has newer info. It can be reached at pc.usl.edu 2000. Try that one
it even has my correct address on it.

Summarized: Are the 2 mtr and 440 handhelds from Radio Shack any good. He is interested since they are both on sale.

The 2 mtr version has been plagued by problems of low audio. Many have had to be returned and replaced by RS. Not usre if this problem was duplicated with the 440 rig.

But it sounds to me like RS may be getting ready to clear out the inventory and drop those models. Not sure if they will be bringing out a new model or simply getting out of the ham market. I wish RS was more upfront about their plans. Bought one of their Sensation computers and really was burnt when they brought out the new model and didn't support the users of their first system. If I were you I'd stay away from the RS products and buy your handheld from a reputible ham radio manufacturer.

First a question about the amcomm s225.
This is a mobile unit from the mid-'70s.
Recv seems ok but the TX is off by +2.8kHz.
I have the schematics but it is an unusual design.
Anyone have any experience with this model or
willing to make some suggestions if I send a copy of the schematic?

Second I would like to investigate a noise problem on transmitted audio from
the ft-23 while using an external mike. Does anyone have a service manual
and/or schematic of which they would be willing to send copies?

Ken.

640. AUTOMATIC RDF ANT SYSTEM

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-14 13:58:17 UTC
From: supervisor@rose-hulman.edu
Message-ID: <supervisor.4.766331897@rose-hulman.edu>
Source record: 268301

While reading the interesting replys concerning the digital RDF
systems I recalled the DF antenna system we have our Operation Catapault
kids build here at Rose-Hulman during their 3 wk summer program.
We call it a "THUNDER STORM DETECTOR" and was not invented by us.
Perhaps someone else can fill in whose idea this was. It consists of 2
wound loop ants displaced 90 degrees vertically. Each ant has an amp, broad
tuned to amplify lightening strike pulses. The antennas are aligned NS / EW
and the signals from the NS ant fed directly to the vertical input of an
oscilloscope. EW signals to the horizontal input. The resultant input is
vectored on the scope face as bright spikes in the direction of the burst,
and proper adjustment of scope gains will give an @ intensity of lightening
burst by the length of the trace spike radiating out from the center of the
scope screen.
This works very well. The high school seniors are assisted in design
of the IC op amps, and build all the hardware.
A similar design could be applied to any frequency by having tuned
amplifiers. A portable scope in a car/van would make this a great fox hunt
ant system. Or great for nailing the nerds QRMing the input of repeaters.

: their answer is usually something like "Well, what's the output level?"
: which is met by silence on the other end.....Part of the problem may be

A difficulty is that some radios, (and I think this includes the IC-725),
has *no* provisions for a transverter. Thus, if you want a low level
transmit output and separate receive connection, you have to go into the
radio and bring out the appropriate connections. Of course, this is
precisely what the original poster didn't want to do. This trend is
most noticeable on the less expensive or budget radios; the top of the
line models retain such features as transverter jacks.

The AO-21 satellite boasts a fine AFC on the uplink receiver.
Working the satellite with your TH-78A set to 435.0125 should not
be a problem, although as the satellite move farther away from you
it may take a half second or so for the AFC to lock on your signal
when you transmit.

Erik,
This unit could probably be used for 10m AM. A SSB unit would be a
better candidate. The PLL chip is the place to start. The 8719 or 8734
chips are used ny Cobre (UNIDEN) radios and are quite easily unlocked.
But then you have to move the unit up from 27.4 to the 28-30 Mhz range,
which is quite a pull on the tuned circuits for 27 mhz receive and
transmit. You can install a wider range varactor diode often referred
as a super diode by the CB hop-up guys, and then the Clarifier must be
modified to track on transmit, then widened to 10KC to track between the
fixed channels. A "Super Slide" diode for USB/LSB/AM (3 total if you
plan on utilizing all 3 modes will help, as well as a 10-turn pot to
replace the clarifier and turn it into a pseudo vfo. Then, the receive
and transmit has to be "broadbanded" to provide sensitivity and uniform
output across the newly widened frequency range. It is an excellent
project, and much will be learned from doing the modifications, but a
close-out on a uni 2510 would fit the bill better in the long run.
For info on what is available in the CB HopUp arena, contact Lew
Franklin of CB City International. He has ads in most electronics
magazine classified sections, and provides info, parts, etc. for the
modifications. Good luck with the project.

649. wa8ded firmware needed!!!

SB QST ARL ARLB032
ARLB032 Resolution gains majority

Resolution gains majority

The Amateur Radio Service Joint Resolution, H. J. Res. 199, now has a majority of the US House of Representatives as cosponsors. On April 11, four additions to the list of cosponsors brought the total to 220, (of which three are non voting delegates).

The four are: Rep. James Talent (R-MO), Del. Eleanor Holmes Norton (D-DC), Rep. Thomas Ridge (R-PA), and Rep. Don Young (R-AK).

The Resolution seeks formal recognition of the value of Amateur Radio to the country, would support Amateur Radio as ''national policy,'' and would encourage rules and regulations to facilitate Amateur Radio as a public benefit by encouraging new technologies.

Including Resolution sponsor Jim Cooper (D-TN), the total number of voting sponsors is now 218. There are currently 434 Representatives in the House.

More on the Resolution and the League's efforts in Washington were in April QST, pages 47 to 50.

SB SPACE ARL ARLS019
ARLS019 STS-59/SAREX update

With nearly all of the SAREX school contacts successfully completed, the crew of the Space Shuttle Endeavour may have additional opportunities for random contacts with the Amateur Radio community. There have also been dozens of reports from amateurs who have made successful contact with the robot packet station, W5RRR-1.

As a reminder, all SAREX operation is split. The Shuttle voice and packet downlink frequency is 145.55 MHz. Please, do not transmit on the downlink frequency. The worldwide packet transmit frequency is 144.49 MHz. FM voice transmit frequencies for all areas except Europe are 144.91, 144.93, 144.95, 144.97 and 144.99 MHz. The European voice uplink frequencies are 144.70, 144.75 and 144.80 MHz. Please, only transmit on the uplink frequency when the Shuttle is within range of your station.

Crew opportunities for random contacts will be made on a non-interference basis with other scheduled flight activities and work. Look for call signs N5QWL and N5RAX on 2-meter FM voice.

The Shuttle is scheduled to land on Monday, April 18 at 1612 UTC.

Jim Mollica Jr, N2NRD, reported copying these packet beacons from the Shuttle:

10 April 1994, W5RRR-1>QST Hi from low Earth orbit.. We had a great launch, and the radar lab in our payload bay is working well. We have set up our living and working quarters, and have even had time to get on 2m voice twice. Being in space is GREAT. 73, N5QWL

10 April 1994, W5RRR-1>QST Hello from Endeavour. The Red Team has been on duty today. We are supporting Space Radar Laboratory operations. We have seen a huge dust storm in Africa, and a lot of frozen lakes in Canada. Earth from orbit looks great. We are

enjoying the mission and will hand over to the Blue Team in a few hours.

To obtain a QSL, send your report and QSL to ARRL EAD, STS-59 QSL, 225 Main Street, Newington, CT 06111, USA. Include the following information in your QSL or report: STS-59, date, time in UTC, frequency and mode (FM voice or packet). In addition, you must also include an SASE using a large, business-sized envelope if you wish to receive a card. The Orange Park Amateur Radio Club in Florida has generously volunteered to manage the cards for this mission.

The following Keplerian elements reflect the orbit following a retrograde trim burn performed this morning, April 12.

From: gbrown@unlinfo.unl.edu
Message-ID: <2ok3sp$2ps@crcnis1.unl.edu>
Source record: 268312

An interesting way of looking at the delay problem...if the delay is always 10 to 12 weeks, and is not getting continuously longer, then the FCC must be keeping up with incoming applications. If they were not keeping up, then the delay would always be increasing. If they are in fact keeping up and just have a backlog, then maybe they should just make an effort to catch up and then they could go back to keeping up, but with less of a delay. Is this too simple to be correct???

Fortunately, I'm just waiting for an upgrade, but I do get tired of being "temporary AA". Then again, my wife is still waiting for her first ticket, and getting impatient...

Question: What would be the best band for radio communication inside
of caves. I've only tried 2 meters at 5w and had limited success.
Would 6 meters be any better, 10 meters? On two meters I can get
reasonable propagation down long tunnels and through a squeeze or two.
I'm assuming that the signals are doing a lot of bouncing around off of
the rock walls down there. Also, some caves seem to be a lot better
then others.

Any one have any experience with underground radio?

Timothy McNulty N6HFS tjmcnulty@ucdavis

: the rosette. Mechanical arrays aren't generally quick enough to catch
: the burst, and any system that depends on a continous pure carrier is
: out the window. (Typically the offender is going to be a late model
: Motorola repeater that keys while the PLL is still sweeping into lock.
: Hunting them down seems to be a regular passtime around here.)

Direction finding is certainly part of the passtime. A method that
also has promise is "fingerprinting," characterizing the brief
burst in ways that differentiate it from other sources. A local
repeater here does this; I believe the system is available for
purchase (see small ads in the back of recent QSTs). If you want
to get really serious about this aspect of the solution, my
employer sells an instrument that can time-capture a tremendous
amount of raw data and allows analysis of the carrier and modulation
to your heart's content. The carriers and tone modulations have
distinct amplitude and frequency characteristics as a function of
time that differ from one transmitter to another, even for the same
model. (I believe the operator of the repeater mentioned above
can even lock out responses to particular transmitters based on
this information. You "kerchunk" a few times, he locks you out,
and you will need a different transmitter to access his repeater--
or get your apology accepted.)

Sorry for the drift from the original topic.

I've wondered why the GPS technology can't be used in reverse. Put 3-4 stable receivers up on hills about 30-50 km apart (maybe even 100 km if the hills are high enough). Clock the anomolies of the incoming signal with something akin to an atomic clock and forward from all receivers to a centeral processing point. The anomolies would include 1) start of a signal, 2) stop of a signal, 3) non-repeating characteristics (DTMF start/stop), 4) etc.

Time stamp the anomolies at each repeater. The centeral processor could command the receivers to another frequency to do a quick check of the propogation characteristics (the central site transmits a known signal, each receiver time stamps it, then each receiver transmits in sequence with the other receivers timestamping. All timestamps get sent to the central processor. The central processor knows everybodies exact location and can thereby deduce the clock timing differences for each site. Ergo, we now have adjusted timings for the original signal.

It falls down to simply solving a set of simultaneous equations involving the locations of all receivers and the timestamps of the anomolies.

Given that the unknowns are X0, Y0, and T0 (coordinates of LID and times signal was transmitted) with knowns X1, Y1, T1 (coordinates of receiver 1 and time signal arrived there), X2, Y2, T2 (ditto #2), and X3, Y3, T3 (#3) you get these three equations (assuming only three receivers):

```
(X1 - X0)^2 + (Y1 - Y0)^2 = (T1 - T0)^2 * c^2
(X2 - X0)^2 + (Y2 - Y0)^2 = (T2 - T0)^2 * c^2
(X3 - X0)^2 + (Y3 - Y0)^2 = (T3 - T0)^2 * c^2
```

Three equations, three unknowns ==> should be solvable. After three pages of hand written stuff I've dropped a term or two. Anybody care to simplify?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 14/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 14 APRIL AND FORECAST UP TO 17 APRIL

IPS Warning 11 will be issued later today.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 079/019

1B. SOLAR FORECAST
15 April 16 April 17 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 080/020

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly unsettled, with brief
active to minor storm periods 09-15UT.

Estimated Indices : A K Observed A Index 13 April
Learmonth 20 3334 5333
Fredericksburg 20 24
Planetary 25 25

Observed Kp for 13 April: 3454 3444

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
15 Apr 15 Unsettled.
16 Apr 20 Unsettled.
17 Apr 45 Active to minor storm.

2C. MAGNETIC COMMENT
None.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
14 Apr normal fair-normal poor-fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
15 Apr normal fair-normal poor-fair
16 Apr normal fair-normal poor-fair
17 Apr normal normal fair
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near normal to 15% depressed.

Observed T index for 14 April: 22

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
15 Apr 20 Near predicted monthly values/depressed 15%.
16 Apr 25 Near predicted monthly values/depressed 15%.
17 Apr 30 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
None.

Next time borrow a couple of 1280 MHz portables. You will be surprised at the propagation even using low power of 100 mw. There is more bounce. Remember you are inside a waveguide. If the radio wave exceeds the frequency of the waveguide there will be attenuation. Those mili-meter waves will travel through a squeeze that is smaller than a large two meter sized squeeze.

Bob

Greenbelt, MD, 4/14/94 at 0:40 UTC

The official SAREX element set at this time is GSFC-016. This element set
was generated by Ron Parise, WA4SIR, of the Goddard Space Flight Center.
Gil Carman, WA5NOM, reports that the predictions using GSFC-016 were 6
seconds earlier than GSFC-014 as of 15:00 UTC on 4/13.

STS-59
1 23042U 94020A 94103.28423883 0.00019321 11073-4 10308-4 0 169

NOTE: The Effective Sunspot Number for 13 APR 94 was 11.9.
The Full Kp Indices for 13 APR 94 are: 3+ 4o 5o 4- 3+ 4o 4- 4-
The 3-Hr Ap Indices for 13 APR 94 are: 19 28 46 21 19 28 25 21
Greater than 2 MeV Electron Fluence for 14 APR is: 1.2E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low. Certainly the most
interesting event of the day escaped detection in H-alpha and
soft x-rays, but was dramatic in x-ray imagery. A large volume
of the south-southeast quadrant was seen to dramatically
restructure during the first 5-6 hours of the day. This event
suggests a large-scale coronal mass ejection, extending to near
the ecliptic plane. Just a very small filament disappeared as
part of the event. Elsewhere, little flare activity occurred.
One new Region, 7701 (N05E77), rotated into view as a mature

sunspot.

Solar activity forecast: solar activity is expected to be
very low.

STD: A full-disk Yohkoh x-ray image has been appended to this report
showing another large trans-equatorial coronal hole approaching the
central meridian at about 02:50 UTC on 14 April.

The geomagnetic field varied from quiet to minor storm
levels during the past 24 hours. Nighttime substorms continue.
The greater than 2 MeV electron fluence was very high.

Geophysical activity forecast: the geomagnetic field is
expected to be increasingly more disturbed through the
interval. Effects of today's CME are due to begin midway
through the interval, culminating in minor storm conditions on
April 17.

Event probabilities 15 apr-17 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 15 apr-17 apr

A. Middle Latitudes
Active 30/25/20
Minor Storm 20/35/50
Major-Severe Storm 10/20/20

B. High Latitudes
Active 40/15/10
Minor Storm 15/40/50
Major-Severe Storm 05/15/35

HF propagation conditions continued below-normal over the
upper-middle to high latitude paths. Near-normal to
slightly-below normal propagation was observed elsewhere.
Similar conditions are expected until 17 April when effects
from the above-noted coronal mass ejection should arrive,
resulting in renewed signal degradation for most regions.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

I've been looking for the AC power supply to run
a boatanchor HW32(a) Heath rig I have. I have located
one, but it appears to be an HP23. I believe there were
also a and maybe b and c models of the power supply. I'm
assuming that these were revisions of the original.

Can anyone say anything about the differences
between the earlier/later versions?

NOTES:
Predicted geomagnetic activity is based heavily on recurrent phenomena. Transient energetic solar events cannot be predicted reliably over periods in excess of several days. Hence, there may be some deviations from the predictions due to the unpredictable transient solar component.

Chart Start Date: Day #045
```

NOTES:
This graph is determined by plotting the greater of either the planetary A-index or the Boulder A-index. Graph lines are labelled according to the severity of the activity which occurred on each day. The left-hand column represents the associated A-Index for that day.
Q = Quiet, U = Unsettled, A = Active, M = Minor Storm,
J = Major Storm, and S = Severe Storm.

CUMULATIVE GRAPHICAL CHART OF THE 10.7 CM SOLAR RADIO FLUX

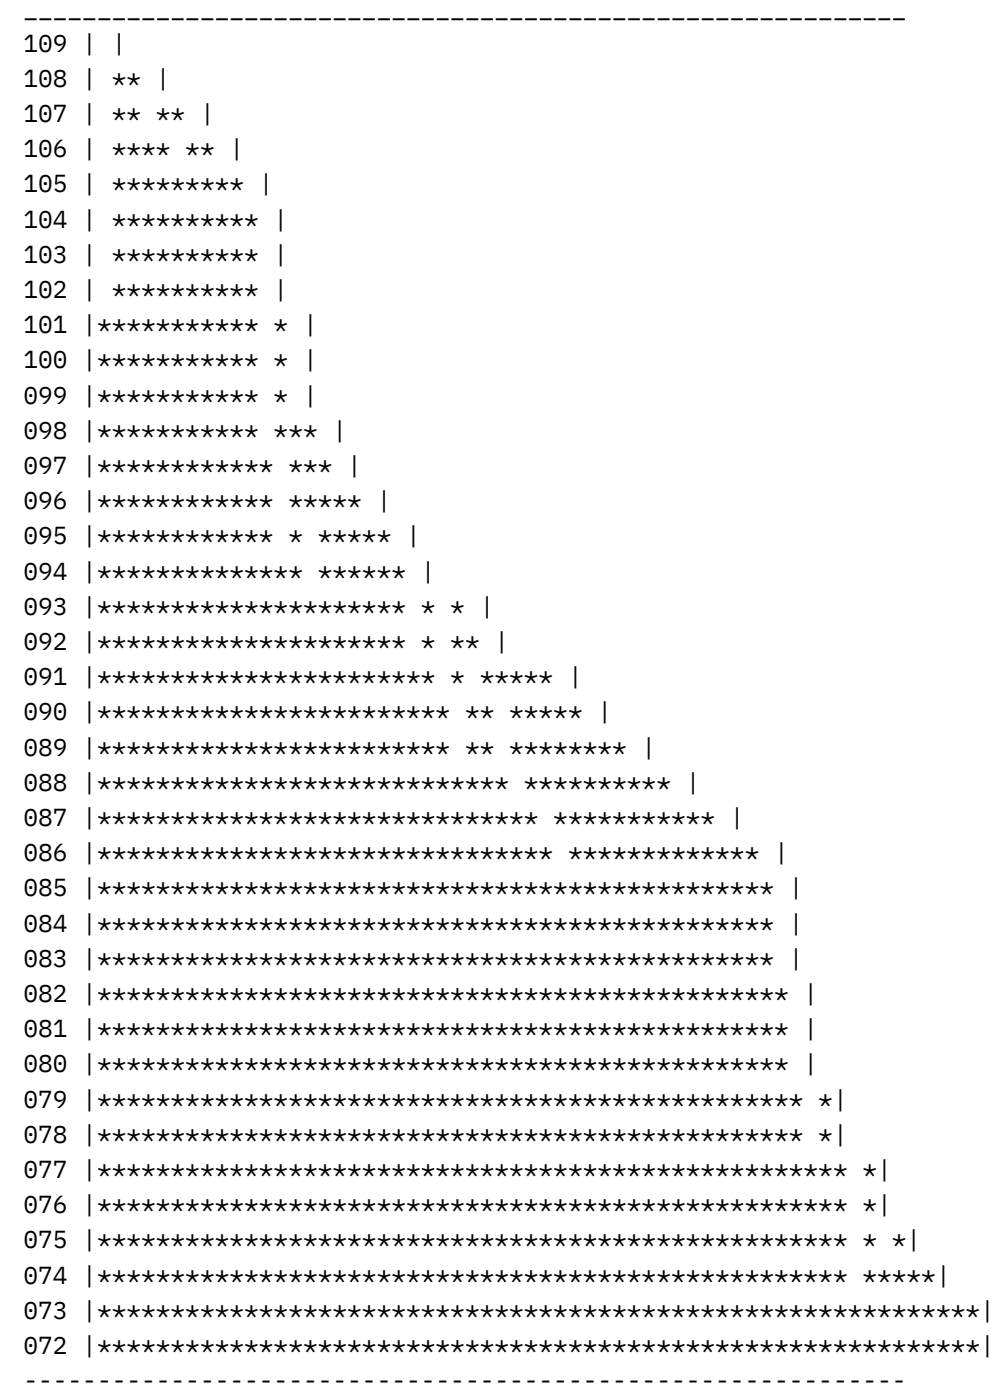

Chart Start: Day #045

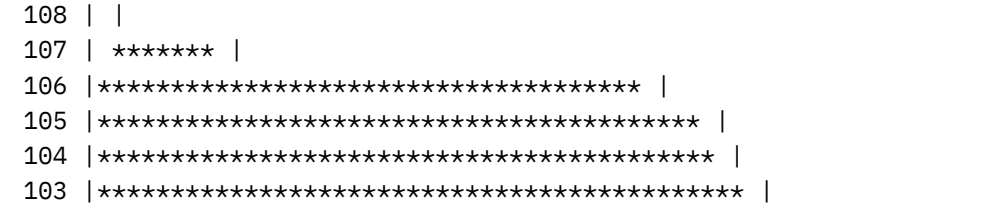
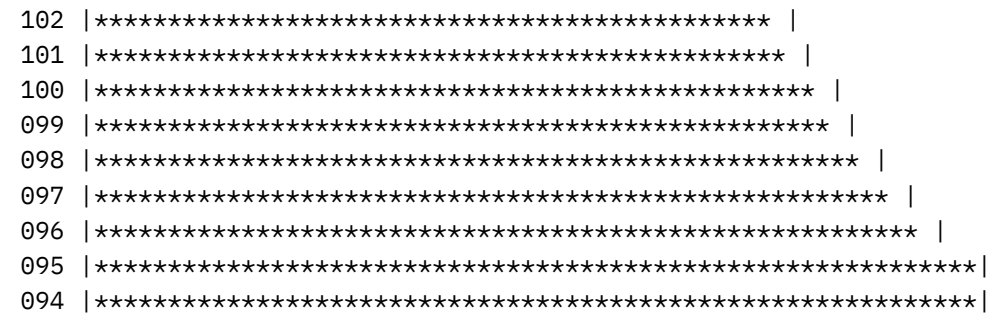
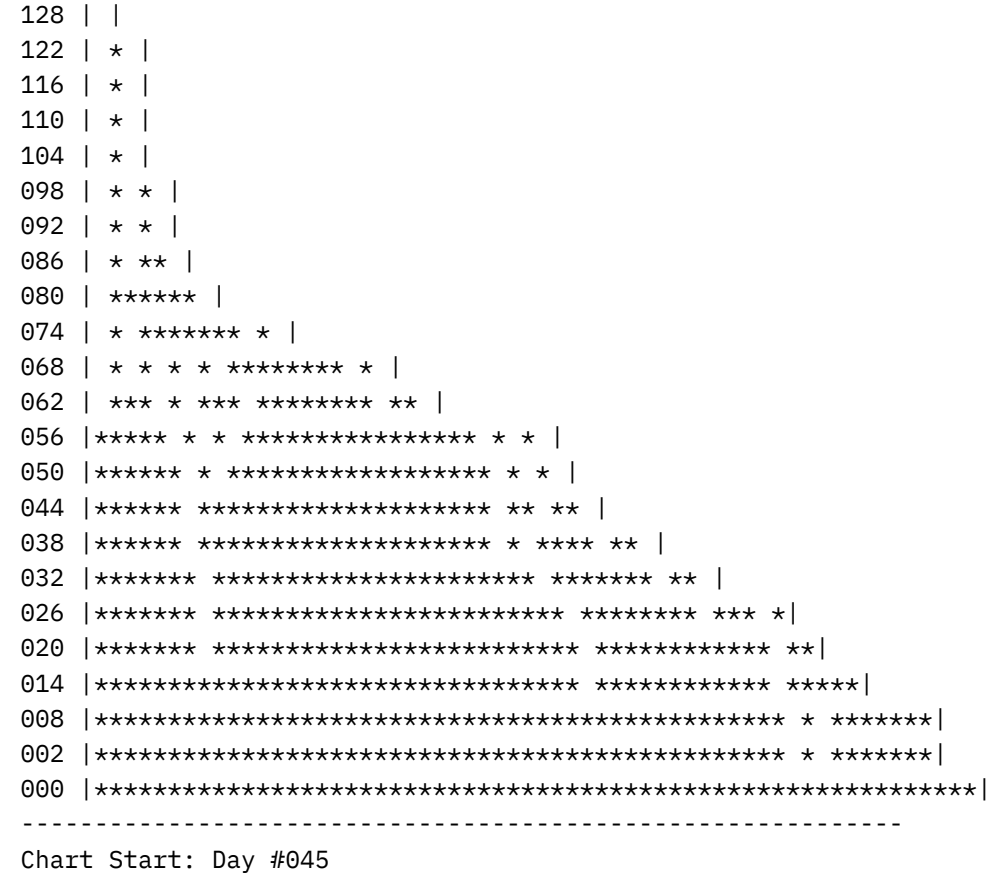
GRAPHICAL ANALYSIS OF 90-DAY AVERAGE SOLAR FLUX





NOTES:
The 10.7 cm solar radio flux is plotted from data reported by the Penticton Radio Observatory (formerly the ARO from Ottawa). High solar flux levels denote higher levels of activity and a greater number of sunspot groups on the Sun. The 90-day mean solar flux graph is charted from the 90-day mean of the 10.7 cm solar radio flux.

CUMULATIVE GRAPHICAL CHART OF SUNSPOT NUMBERS



NOTES:
The graphical chart of sunspot numbers is created from the
daily sunspot number counts as reported by the SESC.

Hi!
My name is Luis Verissimo (CT1EPM> I'm an Electrical and Computer Engineering
student at the University of Alabama in Huntsville.
I'm part of a group of undergraduate students intersted in starting a Student
run FM radio station on campus. We are just starting, ans we are looking for
all the information that we can get on college FM radio stations.
We would deeply appreciate any information regarding this topic. We would like
Right now any kind of information on how to go about getting our project
will be appreciated.
We can be contacted at: licau@ebs330.eb.uah.edu
Thank you
73's to y'all

Luis Verissimo (CT1EPM)

>Recently Gary (I hope my memory is correct) commented that fm stations
>may be assigned frequencies as much as 10 KHz away from the standard.

Your memory is correct, but the statement isn't. The 10 kHz offset is
used when necessary by co-channel television stations to greatly reduce
the effect of visual interference.

> duplicated with the 440 rig.

That was a misalignment problem that was corrected very early. To the
best of my knowledge it has not been a problem for well over a year.

> But it sounds to me like RS may be getting ready to clear out the
> inventory and drop those models. Not sure if they will be bringing out
> a new model or simply getting out of the ham market.

I don't believe they are. Both units are good selling items and have
received very good reviews from all but one person I've spoken to. In
that one case, the unit failed after a week of use. He took it back to
the store and they exchanged it with another unit.

> I wish RS was more upfront about their plans.

Me too. I've heard that the company is changing direction to reposition
itself from a technology follower to a technology leader. By the time
that kind of information reaches me though, it been through so many hands
that it doesn't always bear a great resemblance to the original. Radio
Shack will be at Dayton. Maybe someone on the net will get some product
planning information from them and post it here for our benefit.

> Bought one of their Sensation computers and really was burnt when
> they brought out the new model and didn't support the users of their
> first system. If I were you I'd stay away from the RS products and
> buy your handheld from a reputible ham radio manufacturer.

I'm sorry to hear of your experience with the sensation. What kind of
support did you expect and how did they fail to provide it? Would you
have had better service if you had bought from another vendor? Have
you had better service from another vendor?

Note:
I work part-time for Radio Shack, so my opinions may be biased. I own
an HTX-404 70cm HT and like it so much that I'm about to buy an HTX-202
2 meter HT. They seem to be better radios than my icom dual bander

though larger and heavier. I haven't had a chance to perform a
subjective test yet, but the HTX-404 certainly has better receive
audio.

669. Converting Motorola gear

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-15 12:51:07 UTC
From: bodoh@dgg.cr.usgs.gov
Message-ID: <1994Apr15.125107.12320@rsg1.er.usgs.gov>
Source record: 268433
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

I see a lot of Motorola radios for sale on the net, in the yellow sheets and at ham fests. Are there any books available that cover the ins-and-outs of converting them to amateur use? It would be good to know which radios are best suited to amateur purposes as well as how difficult they are to convert and what tools/equipment is necessary. Thanks...

673. Info. on Scanners?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-15 13:58:15 UTC
From: dhorton@as.ua.edu
Message-ID: <dhorton.5@as.ua.edu>
Source record: 268437

I'm interested in getting a scanner, but haven't the slightest idea about brands or specs that I should be looking for.

What I need is a portable (handheld) unit that picks up 200 channels or more. I need more than just the local traffic stuff...I need access to weather, aviation traffic, and military traffic.

Finally, what about the life of such units? With proper care I'm assuming these can last for years, but is there anything else in the way of general maintenance I should be made aware of to get years of enjoyment from one?

(Please reply privatley...my news feed is not always reliable)

Thanks,

674. ORBS$105.WEATH.AMSAT

Hi

If you want to know about the 'fingerprinting' system contact Phil Ferrell - K7PF. He holds the patent and runs the Seattle Repeater (146.28/88). He also mfgs and sells these systems.

In article et0@charm.magnus.acs.ohio-state.edu, tgwright@magnus.acs.ohio-state.edu (Thomas G Wright) writes:
-->
-->Can anyone tell me what the PL code is for the Sanibel Island 144 repeater?

From my 1993-1994 ARRL Repeater Directory, it lists the following:

Location Output Input Call Notes Sponsor
-------- ------ ----- ---- ----- -------
Sanibel 146.790 - K8CUL ter SEM

My book lists the notes as:

t - Tone-access (CTCSS Tone) required to access. (I guess it needs a PL)
e - emergency power
r - (this is not listed) your guess is a good as mine. Maybe someone
out there might shed some light on this.

If it were me, would set my FT530 to 146.790 down 600 kHz and scan the
PLs while the repeater is used waiting for the correct PL to break
squelch on my handheld.

Another way is to contact:

>> call k8cul

Call-Sign: K8CUL Class: TECHNICIAN
Real Name: GAILLARD A DOBBS Birthday: SEP 24, 1939
Mailing Address: 2221 PERIWINKLE WAY, SANIBEL, FL 33957
Valid From: NOV 1, 1988 To: NOV 1, 1998

>>

-->Also, what machines are accessible from North Captiva Island with a handheld?
-->
-->Thanks,
-->Tom KF8LM

This contact could also answer your other question.

Good luck!

73's
Bill

I am looking for a Sony 2010 shortwave radio.
Anyone having one in excellent or like new condition, please
reply directly to: howie@intgp1.att.com.
Those with a radio in lesser condition, please do not reply
as I have much email to sort through each day.

Thanks in advance,

Howard Davis

Robert Carpenter (rc@cmr.ncsl.NIst.GOV) wrote:
: In responding to questions about EME programs, Charlie Betz N0AKC, says:
: > There is also a new program available from Paul, N1BUG, that also includes
: > spatial polarity calculations (not sure if SKYMOON does that or not).

: I know polarity comes in positive and negative. How does this affect radio
: propagation? How is the polarity of space computed?

: (Or do you mean polarization? .... as in antennas and radio waves ....)

Maybe it comes form the way people think of the problem.
Both Tom and Steve also refer to the term.

Spatial Polarization and Faraday Rotation.
p. 95 22nd Central States VHF conference.

Rear-Mount Yagi Arrays for 432 MHz EME
p. 79 ARRL Antenna Compendium III

What is being referred to is that when a signal
is returned to another point on the earth, the polarization
may well be different, even without Faraday rotation. Thus,
EME stations might not hear each other unless they alter
their polarity or wait for favorable Faraday rotation.
(linear polarization assumed)

>is not.

It's around the 13th if I recall correctly. Info can be obtained by
typing 'info' at the prompt.

Remember that the boys (and girls?) that run the server got the CD as a
donation from the publisher. If someone would like to donate an update,
I'm sure they'd be grateful. Beats the heck out the old way - getting
the tapes from the FCC and spinning them down for public consumption ...

685. PL on IC-24at?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-15 16:55:12 UTC
From: ibg@acsu.buffalo.edu
Message-ID: <CoB8C1.Kp4@acsu.buffalo.edu>
Source record: 268450

I wanted to check with some people out there as to whether the IC-24AT has PL. I think since the end is "AT" that means that it has PL, but I am not sure.
Please mail me if you know.

Thanks

Ian, KF2MM

weavrdsp.zip - src to "Weaver Method Modulator Using DSP" (QEX 9/93)

For readers of this newsgroup both new and experienced, these files are a de-facto "Required Reading List" to provide definitive answers and pointers to other sources for questions that come up in this forum.

This is also your archive, so any additional articles, guides, or small PostScript graphics that you feel would enhance this collection are most welcome. Submit to Devon via his E-mail address above.

Thanks go to Devon Bowen, KA2NRC, for providing diskspace and maintaining these valuable archives, as well as all the authors who wrote and submitted the information contained in them.

Additional archives out there that have /pub/ham-radio directories are encouraged to "mirror" these files to provide redundant storage for these documents. Some of these sites (which may or may not mirror ftp.cs.buffalo.edu) include:

Questions about FTP mirroring and access to appropriate software should be directed to me, or do an Archie search on the keyword "mirror."

For those without FTP access (and only those without FTP access, please), there is an FTP mail server at ftpmail@decwrl.dec.com. Send the word "HELP" to this address for more information.

Additional documents on Usenet and other newsgroups may be obtained from rtfm.mit.edu via anonymous FTP or via mail server (send the word "HELP" to mail-server@rtfm.mit.edu).

The American Radio Relay League has recently made available a mail-server to distribute many of their informational documents in electronic form. Send E-mail to info@arrl.org with "HELP" in the message body for more information. These files are also mirrored on oak.oakland.edu.

Yet another mail-server has been made available by Steve Harding, KA6ETB. Send E-mail to ham-server@grafex.sbay.org with "HELP" in

the message body for more information.

Archive-name: radio/personal-intro
Revision: 1.5 12/18/93 14:15:53
Changes: new mailing lists, .packet rmgroup, and .policy updates

(Note: The following is reprinted with the permission of the author.)

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info,
and rec.radio.swap newsgroups. It is intended to serve as a guide for the new
reader on what to find where. Questions and comments may be directed to the
author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@oac.hsc.uth.tmc.edu. This message was last changed on 18 September
1993 to add the mailing lists for the new rec.radio.amateur newsgroups, to
note the rmgroup of rec.radio.amateur.packet, and to officially retire some
(in)famous threads of discussion on rec.radio.amateur.policy.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

As the net grew, and as packet radio came into vogue, packet discussion began
to dominate other topics in the group and on the list. This resulted in the
logical solution: a group was created to hold the packet discussion, and
another corresponding mailing list was created as well: net.ham-radio.packet
and PACKET-RADIO, respectively.

These two groups served for several years, and went through Usenet's Great
Renaming essentially unchanged, moving from net.ham-radio[.packet] to
rec.ham-radio[.packet]. Readership and volume grew with the rest of the
network.

The INFO-HAMS mailing list was originally run from a US Army computer at
White Sands Missile Range, SIMTEL20. There were few problems with this
arrangement, but one was that the system was not supposed to be used for
commercial purposes. Since one of hams' favorite pastimes is swapping
gear, it was natural for hams to post messages about equipment for sale
to INFO-HAMS/rec.ham-radio. This ran afoul of SIMTEL20's no-commercial-use
restriction, and after some argument, a group was created specifically
```

for messages like that: rec.ham-radio.swap. This group wasn't gatewayed to a mailing list, thus avoiding problems.

While all this was happening, other folks wanted to discuss other aspects of the world of radio than the personal communications services. Those folks created the rec.radio.shortwave and rec.radio.noncomm newsgroups, and established the precedent of the rec.radio.* hierarchy, which in turn reflected Usenet's overall trend toward a hierarchical name structure.

The debate between proponents of a no-code ham radio license and its opponents grew fierce and voluminous in late 1989 and 1990. Eventually, both sides grew weary of the debate, and those who had not been involved even more so. A proposal for a newsgroup dedicated to licensing issues failed. A later proposal was made for a group that would cover the many recurring legal issues discussions. During discussion of the latter proposal, it became clear that it would be desirable to fit the ham radio groups under the rec.radio.* hierarchy. A full-blown reorganization was passed by Usenet voters in January 1991, leading to the overall structure we now use.

After the reorganization, more and more regular information postings began to appear, and were spread out across the various groups in rec.radio.*. Taking the successful example of the news.answers group, where informational postings from across the net are sent, the group rec.radio.info was created in December, 1992, with Mark Salyzyn, VE6MGS, initially serving as moderator.

In January, 1993, many users started complaining about the volume in rec.radio.amateur.misc. This led to a discussion about a second reorganization, which sparked the creation of a mailing list by Ian Kluft, KD6EUI. This list, which was eventually joined by many of the most prolific posters to the ham radio groups, came up with a proposal to add 11 groups to the rec.radio.amateur hierarchy in April 1993. The subsequent vote, held in May and early June, approved the creation of five groups: rec.radio.amateur.digital.misc (to replace .packet), .equipment, .homebrew, .antenna, and .space.

The Current Groups

I can hear you asking, "OK, so this is all neat history, but what does it have to do with me now?" The answer is that the history of each group has a direct bearing on what the group is used for, and what's considered appropriate where.

The easy one is rec.radio.amateur.misc. It is what rec.ham-radio was renamed to during the reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize

this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, should be removed by September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is now rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there.

The first reorganization added two groups to the list, one of which is rec.radio.amateur.policy. This group was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The other added group is rec.radio.cb. This is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently Mark Salyzyn, VE6MGS. The email address for submissions to the group is rec-radio-info@ve6mgs.ampr.ab.ca. Inquires and other administrivia should be directed to rec-radio-request@ve6mgs.ampr.ab.ca. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas,

commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

A Few Words on Crossposting
===========================

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

688. Electronics and Wireless World

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-15 17:18:45 UTC
From: ljw1004@cus.cam.ac.uk
Message-ID: <2omi9l$e0r@lyra.csx.cam.ac.uk>
Source record: 268453

I am interested in the initial development of radios
of the sort that might be constructed at school --
ferrite antenna, op-amps, and a simple LCR filtering circuit.
If anyone could point me to an issue in E & WW, or some other
journal, I would be very grateful.

If people would be kind enough to email, I will post a summary of replies.

Yours &c.,

-- Lucian Wischik, Queens' College, U of Cambridge. ljw1004@cus.cam.ac.uk

SB SAREX @ AMSAT $STS-59.021
STS-59 Western R/S Times 04/15

Below are the rise and set times for STS-59 for selected US cities
over the next four days. This data was generated to help hams without
orbit programs to participate in the SAREX activities. Please note that
the times shown are UTC and NOT LOCAL TIME. This listing includes only
those passes with an elevation greater than 5 degrees. For information
regarding SAREX frequencies and operations procedures, check your
local PBBS, or bulletins from W1AW, W5RRR, W6VIO or WA3NAN.

Symbol key: rise = time that shuttle appears above horizon
tca = time of closest approach to observer
set = time that shuttle disappears below horizon
el = maximium elevation above horizon
geo = geometry: A = Ascending orbit, moving south to north
D = Descending orbit, moving north to south
E = passes east of observer
W = passes west of observer

* Deorbit burn is scheduled to occur on orbit 165, with a landing at KSC
on orbit 166 at 15:53 UTC April 19. Data for subsequent orbits is provided
in the event of a landing delay.

Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 17th of April and here is the GB2RS news broadcast, prepared by the Radio Society of Great Britain.

It's Scottish Activity weekend and we wish all our Scottish listeners an active day. The organisers of this event, the Scottish Tourist Board (Radio Amateur) Expedition Group, aims to encourage activity by Scottish radio amateurs and to create a worldwide interest in contacts with Scottish stations. The Scottish Century Award is available and further details can be obtained from Robbie Aitkenhead, GM4UQG, whose address is correct in the RSGB Call Book. All GM, GS and 2M stations are invited to participate.

Next Saturday the 23rd of April is International Marconi Day. The event is held each year on the Saturday nearest to the birth date of Marconi and is organised by the Cornish Radio Amateur Club. This year is the seventh IMD and is the biggest event to date, with over 35 special event stations taking part from around the world. The Cornish Radio Amateur Club offers an award for working or hearing a minimum of twelve of the participating stations. For details and a list of official stations which count for the award contact the IMD Awards Manager, Sue Thomas, G0PGX at the Cornish Radio Amateur Club, P O Box 100, Truro, Cornwall, TR1 1RX. Or send a message via packet to G4USB at GB7AKE.

Amongst the International Marconi Day special event stations is GB0IOW which will operate from Alum Bay on the Isle of Wight, described by Marconi as "the World's first permanent wireless station". Another IMD station is GB1IMD which will use amateur satellites only. The station will be operational for the whole of the Saturday. Main activity will be via Oscar 13 mode B, on a down link close to 145.930MHz USB, and with the uplink around 435MHz.

Additional operation will take place via the Russian satellite RS10 on a downlink around 28.385MHz, with an uplink on 2 metres. Precise operating times will depend on the satellites in range. The station will operate from a Marconi factory site in Leicester. For further details contact John Heath, G7HIA.

From time to time, members of the RSGB Propagation Studies Committee produce technical papers for professional conferences. Anyone who would like copies of these papers should contact the committee chairman Charlie Newton, G2AHU, on 0568 780614.

The Coventry/ Northampton HF Direction Finding Qualifying event is scheduled to take place next Sunday the 24th of April. It takes place at Irchester Country Park, NGR 912658 using map 152, Northampton and Milton

Keynes. Participants should assemble at 1pm for 1.20pm start. Competitors requiring supper should notify George Whenham, tel: 0926 812367 no later than today Sunday the 17th.

Attention RSGB members in Scotland: A new RSGB Liaison Officer (RLO) has been appointed for Tayside. He is Alfred Low, GM4UZP, and his address is 21 Earn Crescent, Menzieshill, Dundee DD2 4BS, telephone 0382 644597. RLOs hold a wide range of information and they are available to help any RSGB member seeking advice.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Montserrat, AA6MV will sign VP2MCO from tomorrow, Monday the 18th until Tuesday the 26th of April on 10 - 80 metre using CW and SSB.

From Jerba Island, Tunisia, IK8EVE will sign 3V8TM from Monday the 25th of April until Sunday the 15th of May.

From Maldive Islands, HB9DCO is active as 8Q9DX from Mirihi Island.

And from Switzerland, I1YRL will operate the Geneva ITU station 4U1ITU during Saturday the 30th of April and the special Geneva ITU callsign 4U9ITU throughout the month of May.

Rally news now:

Now the Rallies for today Sunday the 17th of April:

The Bury Radio Society Radio Rally is being held at the Castle Centre, Bolton Street, Bury, Lancs. Doors open at 11am, or 10.30 for disabled visitors. The event features trade stands and a bring and buy stall. Talk-in will be on two metres, channel S22.

The Cambridge Repeater Group Amateur Radio Rally is being held at the Philips Telecom Catering Centre, St Andrews Road, Chesterton, Cambridge. Doors open at 10.30am. The event features trade stands, a bring and buy stall and an auction. Refreshments are available.

The Marske-by-the Sea Radio Rally is being held at the Marske Leisure Centre, High Street, Marske-by-the-Sea, near Saltburn, Cleveland. Doors open at 11am. The event features the usual traders and a bring and buy stall and refreshments will be available.

Now the only event we know for next weekend, Saturday the 23th and Sunday the 24th of April:

The Irish Receiving and Transmitting Society Annual General Meeting and Mobile Rally is to be held at the Jacksons Hotel, Ballybofey, County Donegal, Ireland on Sunday the 26th. This is the first IRTS AGM to be held in Co Donegal. The Hotel is also the host to the IRTS Dinner Dance to be held on Saturday the 23rd. For ticket information and other details contact Ken, EI4DW on 010 353 74 31109.

Now some dates for your diary:

The RSGB National Mobile Rally is to be held at its usual venue on Sunday the 7th August at Woburn Park, Bedfordshire. For further information contact Norman Miller, G3MVV on 0277 225563. The next RSGB Regional Meeting will be held on Sunday the 5th of June in Brighouse, West Yorkshire. For further details, contact RSGB Zonal Council Member Peter Sheppard, G4EJP, on 0964 550397.

HF contest news now:

The RSGB Low Power Contest is taking place today, Sunday the 17th from 0700 to 1100 UTC using CW between 3.510 - 3.560MHz and 7.010 - 7.040MHz. See the February edition of Radio Communication, for the rules and further details.

Clubs wishing to enter the RSGB's HF National Field Day should note that the deadline for registration is next Saturday, the 23rd of April. Further information can be found on page 82 of the February edition of RadCom.

The third in this year's series of RSGB QRS (Slow Morse) Cumulative Contests will take place next Thursday the 21st of April from 1900 to 2030 UTC between 3.540 - 3.580MHz. See April RadCom page 8, for further details and January's RadCom, page 83 for the rules. Novice licensees are particularly encouraged to participate as contacts with Novice calls are worth quadruple points.

The Helvetia Contest takes place during next weekend, starting at 1300 on Saturday the 23rd and finishing at 1300 on Sunday the 24th of April. Use CW only on 1.8MHz, and CW and SSB on 3.5 to 28MHz but excluding the WARC bands. The contest is rather complex so participants are advised to consult the rules which can be found in the April edition of RadCom on page 19.

A special event station active today is GB2AMN, which will be aired by members of RAF Finningley Amateur Radio Society from the Newark Air Museum, from 10am to 6pm on the HF bands and two metres.

And now the solar factual data

The period from the 4th to the 10th of April has seen continuing magnetic storms, particularly at high latitudes, due to the passage of coronal holes. The HF bands continued to be very poor.

Solar activity has remained very low with the sun spot indices down to zero on some days and the mean for the period being only 7. There was only one flare reported which was a sub-flare. This has less energy than a C-class flare, and would not normally be reported. The last M flare reported was on the 27th of February, and solar rotation 1880 has passed without any flares at all. The solar flux levels have also taken a knock and averaged only 74.4 units, being depressed throughout the period. The 90 day mean flux on 9th April was 96 units.

The geomagnetic activity was expected to die down but alas it remained as bad as ever, and was at storm levels every day. Since February the

storms have raged almost continuously making this period the stormiest of solar cycle 22. The Ap indices averaged 40.7 units. The main effects of the storms have been at the higher latitudes with complete ionospheric blackouts. The state has been 'mag storm at high latitudes' all the period. The aa indices, as supplied by the British Geological Survey for the period 29th March to the 4th April, gave daily averages ranging from the only quiet day on the 29th at only 11.1 nanoTeslas, up to the full storm days of the 2nd, 3rd, and 4th, with daily levels up to 98 nanoTeslas. During the auroras of the 2nd and 3rd, there were periods of 137 nanoTeslas. The weekly average was 41 nanoTeslas, about K4, with the storm periods up to K6.

The X-Ray flux has dropped to very low levels and averaged only A1.1 units, the lowest levels since we have been bringing you this data. The Electron Fluence at greater than 2 Mega-electron-volts has remained at a very high level, probably the result of the outpourings from the coronal holes. The sunspot mean for March was RI 31.7 with a maximum of 62 on the 3rd and a minimum of 8 on the 20th. The 6 month smoothed level for September 1993 was 48.5 plus or minus 5. Bartells rotation 2195 starts today, the 17th.

I'll repeat the figures. Spots - 7; Flux - 74.4; Ap index - 40.7; X-ray flux - A1.1; March spot mean 31.7.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon, averaged only 6.1MHz, with the 7th being down to only 4.6MHz. Again, this is the lowest level since we have been bringing you this data. The darkness hour lows have also been depressed, averaging 2.1MHz. However, spread F has been bad, lasting up to 8 hours on some days.

I'll repeat the figures. Highs - 6.1MHz; lows - 2.1MHz.

Now the ionospheric data for the north:

The F2 daytime critical frequencies at Ekaterinberg have been severely affected by the magnetic storms. Readings have not been possible on some days but what we have gives levels of around 4.7MHz. The darkness hour lows were about 2.3MHz.

I'll repeat the figures: Highs - 4.7MHz; lows - 2.3MHz.

Recent times have very clearly shown that it is not only flare activity that can cause magnetic storms. Coronal holes which are magnetic holes in the sun's outer corona have the effect of guiding the solar material out into space. These holes are always present at the sun's poles, but at times such as now, tongues extend down to the solar equator and it is this outpouring which affects the earth.

And lastly the solar forecast:

This week, the quieter side of the sun will be coming into view, and based on past history the magnetic activity should be just about

unsettled. It would appear that some solar restructuring is taking place and the solar flux levels are likely to remain low at about the 80s. Ionospheric MUFs in the south during the daytime are expected to reach about 21MHz, and darkness hour lows about 7MHz. Best contacts should be over north/south paths. For the north, daytime levels will be lower, possibly only 18MHz. Seasonal effects will depress the east/west paths.

And that is the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 Uniform Sierra and G7 Sierra Hotel series, and Novice calls in the 2 0 Alpha Hotel and 2 1 Charlie Uniform series.

Can you really work AO-21 from a handheld? I've tried using my Yaesu 767GX (10 watts) into an 8 element Quagi, with not even a hint of a change in the downlink static.

Am I doing something wrong? I had the uplink tuned to 435.016, and even tried to move it around a little (+/- 5khz or so). Judging from the conversations I hear on the bird, most folks seem to have complete OCSAR setups with BIG antennae and lots of power (100w range).

Greg KD6KGW

p.s. I've also not had any luck with FO-20, but I've made dozens of contacts on RS-10.

692. 3V8AS - Anyone Get a Card?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-15 19:37:54 UTC

: on 10 while mobile?

I had one in the car, and worked quite a few stations a couple of years
ago, but I took it out last fall. One problem is that although 10
m would make a nice local simplex band there is no universal
calling frequency like 146.52 on 10 m ssb. At least not in eastern
ontario.

Source record: 268460

Does anybody have experience w/ Kantronics' Hostmaster for Macintosh? I'm leaning toward the purchase of a KamPlus, and am wondering if I should get Hostmaster or some other third-party multimode controller software. I've also heard that you must use Hostmaster software in order to utilize the KamPlus' ability to simultaneously operate HF and VHF. Is this true?

My Dad's Cadillac keyless entry receiver system doesn't work if the
car is parked near or under their Genie garage door receiver. I
suspect the IF oscillator in the Genie is radiating enough to affect
the receiver in the Cadillac. Has anyone else had this problem, and
if so, how did you fix it? My Dad tried to ground and shield the Genie
receiver but didn't have any luck fixing the problem

Does anyone know how long it takes for a given
identifier to "run out" for area 2 (NYS etc.)
Or does anyone know where (if) the FCC keeps that
kind of info online. I looked in ftp.fcc.gov but
didn't come up with anything close.

What we are looking for is how long the original
W2,K2,WA2,WB2 etc. lasted vs. the current string
(whatever that may be) Tnx in advance.

Besides, the capture effect of FM recievers takes care of the issue
of co-channel interference, unless it gets above what, around 2 or
3 dB.

Can someone explain the reason that this capture effect haoppens in
FM radio reception? Some basic theory with easy math would be
good.

698. How long to pref. calls?

Message-ID: <wier-150494152706@csci-wiermac.etsu.edu>
Source record: 268463

Does anyone have an estimate as to how long it might
be before the preferred callsign docket might be
adopted and go into force (incidentally, I MUCH
prefer "preferred" rather than "vanity" as far as
the name is concerned).

The reason I'm interested is that I might consider
trying to move up from my current class in order to
get an application in an earlier group, but it's gonna
take some work since my last upgrade was in the Dallas
FCC office in 1970!

(Eh? What's that you say sonny - no tubes anymore? :-)

I waited too long, had to buy the $49 extended service plan, and
then get mine taken into a local (Tempe, AZ) service center. The
tech said mine was the lowest he's ever seen. That seems to be
better now, but I am afraid my pl tones are still week as I have
a hard time with autopatches. It might have to go back. There
also seems to be more popping noise when it squelches. Other than
that, I've been real happy.

THE SIX METER AMATEUR RADIO BAND
FREQUENTLY ASKED QUESTIONS
(Designed to help encourage hams to use and enjoy this band!)

WHAT IS THE SIX-METER BAND? The 6 meter band is a portion of the RF spectrum around 50 MHz allocated to amateur radio. The band is on the dividing line where propagation resembles VHF bands like 2 meters and HF bands like 10 meters. The band is fun and fascinating because just about all types of propagation pop up on 6m at one time or another. The band is an acquired taste: a few hams work the band regularly, but most hams never work it at all because activity on it is usually much less than on other bands. Once you acquire the taste, you tend to be hooked for life. The band has become more popular in recent years with the help of the availability of better rigs. There two types of 6m operators: the ones who use FM or packet for local work, and ones who work DX with SSB or CW. (Some like me even do both!) Most of the activity on the band is SSB.

WHAT ARE THE FREQUENCIES? In most of the world, the band runs from 50 to 54 MHz. A detailed list of the allocations in each country is outside the scope of this article. Check the licensing authorities for your particular country, especially if you live outside the Americas or Africa. In Europe, the post WW II allocations plan assigned the 50 MHz region to television. Recently, most European countries have moved their TV to much higher frequencies. As a result, almost all European countries now permit some sort of 6m operation. While the band starts at 51 or 52 MHz in the ANZAC countries such as New Zealand, they permit operation down to 50 MHz outside TV broadcasting hours.

WAS 6M ONCE TV CHANNEL ONE? No. Televisions in the U.S. start at channel 2. TV Channel 1 in the U.S. was allocated 44 to 50 MHz, with 6m occupying the same spot as it does today. By 1948, the FCC re-allocated channel 1 to various two-way services due to interference from police radios, propagation interference, and other problems. The ARRL attempted unsuccessfully back then to get the FCC to re-allocate channel 2 since 6m interferes with it.

IS FM USED ON 6M? Yes, but not that often in most areas. Most 6m enthusiasts use only SSB and sometimes CW. The main FM simplex frequency is 52.525 MHz. Your local range is better on 6m with the same power and a similar antenna. If 2m is too crowded in your area, the FM portion of 6m may be just the solution you need.

IS AM USED ON 6M? Yes, but very rarely in most areas. It seems to be popular in Japan. 50.400 or 50.600 are the AM calling

frequencies.

ARE REPEATERS USED? There are a few 6m repeaters listed in the ARRL Repeater Directory, but some of them are not operational. This will depend on your area. The offset in the U.S. is usually one MHz. (e.g. 53.330 out, 52.330 in)

HOW DO I KNOW IF THERE IS AN OPENING? Of course, the best way is to check for an opening is to listen to 6m, especially for the beacons that are listed in the ARRL Repeater Directory. Monitor 50.110 and 50.125 for SSB openings. You can also monitor 28.885 MHz, the "10 Meter VHF Liaison Frequency", where hams report VHF openings and schedule contacts. You'll hear some of those "pros" you see in QST like W5UN on that frequency. Openings are RARE, except around the summer solstice in June. Patience is a virtue for the 6m operator.

WHAT ARE THE MOST POPULAR FREQUENCIES? The band plan is controversial. Popular frequencies tend to vary from area to area. Per the FCC, 50.0 to 50.1 is reserved for CW work in the U.S. 50.100 is the most popular SSB DX frequency. 50.100 to 50.124 should be used only for DX. Some hams tend to discourage (or flame) U.S. domestic stations from calling CQ in this "DX window". 50.125 is the U.S. domestic calling frequency, and your most likely frequency to hear activity. Most domestic SSB is found between 50.125 and 50.200, but it takes a good Es opening to push stations above 50.150. Only during hot F2 openings do you find SSB above 50.200.

DO I NEED A BEAM ANTENNA? If you want to work DX, yes. You can have fun with a vertical during openings, (I do with an Icom 726 in my car) but the serious stations use beams. Everyone is horizontally polarized, but cross-polarization doesn't matter for Es, F2, or Aurora. A few stations use 3-element beams, but a 4 or 5 element beam is so small that a LOT of people use them. Quite a few people have Cushcraft 6-element "Boomers". There are a few other big beams, and the lunatic fringe stacks them. For example, K6QXY has a stack of 4 six-meter beams, each with a 50ft (15m) boom. The higher the tower the better. I live in subdivision where no outdoor antennas are allowed, so I use a 2-element beam in the attic, and it works OK. I also use a vertical for local FM work. RG8 or RG213 is plenty good enough cable for most people. Antenna-mounted preamps are never needed.

IS 6M NOISY? External noise is fairly high at 50 MHz. It overrides the front-end noise figure on about all the rigs on the market today unless you have a LOT of cable loss or a VERY quiet location.

IS THERE PACKET WORK ON 6M? It depends on the area. Local packet work can be found in the higher frequency portions of the band. There has been very little DX packet work.

CAN I RUN RADIO-CONTROLLED EQUIPMENT USING 6M? This is legal in the U.S. for licensed hams. Check the ARRL Repeater Directory for

suggested frequencies.

WHAT ARE "GRID SQUARES"? On VHF and up bands, the world has been divided in 1-degree latitude x 2-degree longitude "squares" which start at the south pole and date line and "read right up". SSB stations will always identify their grid square along with their call sign, e.g. "KK6MY DM87". Each square is also divided into sub-squares. European stations like the subsquares; most US stations don't even know their own. In any case, the "squares" and their VUCC awards have been a wonderful interest builder, and have kept the QSL printers in business! Check the ARRL Operating Manual for a map of the grid squares.

WHAT RIGS ARE USED? Probably 50% of the active stations have 80 to 150 watt output, either from old Icom 551D s (the 551 is 10W), or from solid-state (brick) amplifiers following the many types of 10W rigs, such as the Yaesu Ft-620B or the Kenwood TS-600. The Icom 575H is very popular, as it has an excellent receiver and 100 watts (the 575A is 10 watts). HF rigs that add 6m (such as the Icom 726) are usable but not as good as radios designed for 6m, especially in the receivers. Perhaps 40% of the stations run just 10 to 20 W, but most of them either get an amplifier or drop out after a year or so. The remaining 10% have tube rigs such as the Drake TR-6. Good 6m rigs tend to be expensive, even on the used market. Swan and Heathkit tube rigs are the least expensive and can be quite usable, but you will run into problems typical of older rigs, such as drift (especially on the Swan). Drift is something you definately do NOT want during those fading Es openings. The kilowatt is quite rare on 6m. The norm for serious stations is 100 to 150 watts.

CAN I USE A TRANSVERTER WITH AN HF RIG TO GET ON 6M? Yes, but you will either spend a lot of time tinkering with a soldering iron, or you will spend a lot of money on the high-end transverters from SSB Electronics. An SSB Electronics 6m transverter fully equipped will run you $800, but may outperform most of the VHF all-mode rigs. (or so SSB Electronics claims) Some hams build transverters, but you need a good level of electronics expertise.

I LISTEN TO 6M OCCASIONALLY, BUT I NEVER HEAR ANYONE. Openings on 6m are rare when compared to the HF bands. Sporadic E (Es) is the backbone of 6m DX. (more information on Es is below) For hams in far northern latitudes (say 50 degrees and above), aurora openings are common in early evenings around the Equinoxes. F2 propagation allows world-wide communication around peak sunspot years.

HOW OFTEN ARE THERE F2 OPENINGS? F2 propagation, the kind that we know and love on 20 meters, occurs rarely on 6m. Only at the peak times of the sunspot cycle, a few years out of each eleven, does the band open up for F2. When it does happen, the band becomes a frenzy of activity, and behaves similar to 10 meters. In the last cycle, there were many openings in 1989 through 1991, but that cycle had an unusually long period of peak activity. Openings occur most often

in Autumn during the daytime. A few stations have worked 100 or more countries, but they have been patiently working the fleeting openings for many years. The March, 1993 QST magazine has an excellent article on 6m propagation that shows a correlation between solar flux and openings.

HOW IS TROPO PROPAGATION ON 6M? The ordinary ground-wave tropo range on six isn't quite as great as on two. There are a number of reasons. Since there are so many other propagation modes on six, people don't try so hard on tropo. Antenna gain often is higher on two. Noise is lower on two. At least in the summer, stations like W3BWU (Pittsburgh), W3IDZ (northern NJ) are easily worked from Maryland with the beam pointing at them, and can be heard at almost any pointing. They are in the 150-W class.

HOW IS METEOR PROPAGATION? Any area workable by meteors can be worked more easily by Es or aurora. Even though meteor bursts are much stronger and longer on six than on two, little use has been made of them. There has been a VERY little meteor-burst packet work on six. W3OTC had the first such contact (with W0RPK). W3XO worked him a few years later.

WHAT ABOUT IONOSCATTER? Some people think it's really meteors, but every weekend morning there are a number of nearly- kilowatt stations working each other on SSB at distances of about 600 - 1000 miles by ionospheric scatter. Sigs are weak, and it takes good beams, height, and power, but it is very reliable. See the old NBS papers by Bailey, Bateman and Kirby, et al. Bateman and Kirby were/are hams. Ross Bateman recently died. Dick Kirby continues as head of ITU in Geneva.

HOW IS AURORA? It is much easier than on two. SSB is usually intelligible. Point north about dusk, most commonly in March and October/November. Lots of people in the far northern latitudes work this mode when it happens.

WHAT ABOUT SPORADIC E (Es)? Es is the most common propagation mode on 6m. The term "sporadic" is accurate: stations can pop in and then fade quickly. I would monitor 50.125 and 28.885 MHz to check for Es. Es has little or nothing to do with the sunspot cycle; it is much more a function of the time of year. Es is most common in June, but can appear from May to August, and around Christmas, here in northern latitudes. In addition to the common single-hop range of 500 - 1500 miles, there are quite a few double- and-more hop contacts on 6m. Now that a number of Europeans are on six, we find that they can be worked from the US east coast each summer. Likewise the Caribbean stations work all over the US. The US west coast can work Hawaii, Alaska, and Mexico. You will also hear some hams on June DXPedition trips to Mexico and the Caribbean; they are easy to work in the late afternoon or early evening, even with 10W and a vertical. The VHF contest in the middle of June is also a good time to work Es.

WHAT ABOUT TRANSEQUATORIAL PROPAGATION? - The southern US gets a number of openings to South America by some kind of ionosphericaly-ducted propagation. The stations are generally about equidistant either side of the magnetic equator. Given exceptional luck, an Es opening linked into this mode can make it available to more northern stations. This mode has bad flutter fading and a touch of the auroral spectrum spreading. This mode also works sometimes on two meters if you use CW and really good gear. It has been worked on 432 MHz.

ANY MOONBOUNCE (EME)? - There have been a few EME contacts on six, but the required antenna size and high background noise makes it out of the reach of most people.

WHAT ABOUT TVI PROBLEMS? There is no doubt about it, six has TVI troubles. You don't find a lot of people on 6m in channel 2 areas unless cable is widely subscribed-to. VCRs are very prone to 6m pickup. Cordless phones, baby monitors, and kiddie walkie-talkies operate on 49 MHz. Most consumer electronic equipment has poor RFI shielding. The common connecting or power cable is a quarter-wave antenna for six. The TV owners have their revenge since the 13th harmonic of the color subcarrier, or something, of TV sets and TV games puts out a birdy at 50.113 MHz to bother the 6m operators in return. There is also quite a bit of trouble from noisy power distribution lines if they aren't buried (usually bad insulators or poor guy bonding). Some interference to telephones and VCRs can be remedied with snap-on ferrites from Radio Shack on the cords on the device.

HOW DO I GET STARTED? You of course will need a rig and an antenna. If you have a budget of about $1000, a newer, digital 100W rig like the Icom 575H is your best bet. Its receiver is excellent. You can get one new, or look for used ones at hamfests, or obtain one through packet or Usenet. Good 6m rigs hold their resale value well. There are many 10W rigs out there; although you will have fun working the good Es openings, this is not enough power for the serious operator. The lowest priced rigs will be old drifty tube radios like the Swans and Heathkits; be prepared to get frustrated with the drift. Amplifiers and beam antennas are readily available.

THE SIX METER AMATEUR RADIO BAND
FREQUENTLY ASKED QUESTIONS
(Designed to help encourage hams to use and enjoy this band!)

WHAT IS THE SIX-METER BAND? The 6 meter band is a portion of the RF spectrum around 50 MHz allocated to amateur radio. The band is on the dividing line where propagation resembles VHF bands like 2 meters and HF bands like 10 meters. The band is fun and fascinating because just about all types of propagation pop up on 6m at one time or another. The band is an acquired taste: a few hams work the band regularly, but most hams never work it at all because activity on it is usually much less than on other bands. Once you acquire the taste, you tend to be hooked for life. The band has become more popular in recent years with the help of the availability of better rigs. There two types of 6m operators: the ones who use FM or packet for local work, and ones who work DX with SSB or CW. (Some like me even do both!) Most of the activity on the band is SSB.

WHAT ARE THE FREQUENCIES? In most of the world, the band runs from 50 to 54 MHz. A detailed list of the allocations in each country is outside the scope of this article. Check the licensing authorities for your particular country, especially if you live outside the Americas or Africa. In Europe, the post WW II allocations plan assigned the 50 MHz region to television. Recently, most European countries have moved their TV to much higher frequencies. As a result, almost all European countries now permit some sort of 6m operation. While the band starts at 51 or 52 MHz in the ANZAC countries such as New Zealand, they permit operation down to 50 MHz outside TV broadcasting hours.

WAS 6M ONCE TV CHANNEL ONE? No. Televisions in the U.S. start at channel 2. TV Channel 1 in the U.S. was allocated 44 to 50 MHz, with 6m occupying the same spot as it does today. By 1948, the FCC re-allocated channel 1 to various two-way services due to interference from police radios, propagation interference, and other problems. The ARRL attempted unsuccessfully back then to get the FCC to re-allocate channel 2 since 6m interferes with it.

IS FM USED ON 6M? Yes, but not that often in most areas. Most 6m enthusiasts use only SSB and sometimes CW. The main FM simplex frequency is 52.525 MHz. Your local range is better on 6m with the same power and a similar antenna. If 2m is too crowded in your area, the FM portion of 6m may be just the solution you need.

IS AM USED ON 6M? Yes, but very rarely in most areas. It seems to be popular in Japan. 50.400 or 50.600 are the AM calling

frequencies.

ARE REPEATERS USED? There are a few 6m repeaters listed in the ARRL Repeater Directory, but some of them are not operational. This will depend on your area. The offset in the U.S. is usually one MHz. (e.g. 53.330 out, 52.330 in)

HOW DO I KNOW IF THERE IS AN OPENING? Of course, the best way is to check for an opening is to listen to 6m, especially for the beacons that are listed in the ARRL Repeater Directory. Monitor 50.110 and 50.125 for SSB openings. You can also monitor 28.885 MHz, the "10 Meter VHF Liaison Frequency", where hams report VHF openings and schedule contacts. You'll hear some of those "pros" you see in QST like W5UN on that frequency. Openings are RARE, except around the summer solstice in June. Patience is a virtue for the 6m operator.

WHAT ARE THE MOST POPULAR FREQUENCIES? The band plan is controversial. Popular frequencies tend to vary from area to area. Per the FCC, 50.0 to 50.1 is reserved for CW work in the U.S. 50.100 is the most popular SSB DX frequency. 50.100 to 50.124 should be used only for DX. Some hams tend to discourage (or flame) U.S. domestic stations from calling CQ in this "DX window". 50.125 is the U.S. domestic calling frequency, and your most likely frequency to hear activity. Most domestic SSB is found between 50.125 and 50.200, but it takes a good Es opening to push stations above 50.150. Only during hot F2 openings do you find SSB above 50.200.

DO I NEED A BEAM ANTENNA? If you want to work DX, yes. You can have fun with a vertical during openings, (I do with an Icom 726 in my car) but the serious stations use beams. Everyone is horizontally polarized, but cross-polarization doesn't matter for Es, F2, or Aurora. A few stations use 3-element beams, but a 4 or 5 element beam is so small that a LOT of people use them. Quite a few people have Cushcraft 6-element "Boomers". There are a few other big beams, and the lunatic fringe stacks them. For example, K6QXY has a stack of 4 six-meter beams, each with a 50ft (15m) boom. The higher the tower the better. I live in subdivision where no outdoor antennas are allowed, so I use a 2-element beam in the attic, and it works OK. I also use a vertical for local FM work. RG8 or RG213 is plenty good enough cable for most people. Antenna-mounted preamps are never needed.

IS 6M NOISY? External noise is fairly high at 50 MHz. It overrides the front-end noise figure on about all the rigs on the market today unless you have a LOT of cable loss or a VERY quiet location.

IS THERE PACKET WORK ON 6M? It depends on the area. Local packet work can be found in the higher frequency portions of the band. There has been very little DX packet work.

CAN I RUN RADIO-CONTROLLED EQUIPMENT USING 6M? This is legal in the U.S. for licensed hams. Check the ARRL Repeater Directory for

suggested frequencies.

WHAT ARE "GRID SQUARES"? On VHF and up bands, the world has been divided in 1-degree latitude x 2-degree longitude "squares" which start at the south pole and date line and "read right up". SSB stations will always identify their grid square along with their call sign, e.g. "KK6MY DM87". Each square is also divided into sub-squares. European stations like the subsquares; most US stations don't even know their own. In any case, the "squares" and their VUCC awards have been a wonderful interest builder, and have kept the QSL printers in business! Check the ARRL Operating Manual for a map of the grid squares.

WHAT RIGS ARE USED? Probably 50% of the active stations have 80 to 150 watt output, either from old Icom 551D s (the 551 is 10W), or from solid-state (brick) amplifiers following the many types of 10W rigs, such as the Yaesu Ft-620B or the Kenwood TS-600. The Icom 575H is very popular, as it has an excellent receiver and 100 watts (the 575A is 10 watts). HF rigs that add 6m (such as the Icom 726) are usable but not as good as radios designed for 6m, especially in the receivers. Perhaps 40% of the stations run just 10 to 20 W, but most of them either get an amplifier or drop out after a year or so. The remaining 10% have tube rigs such as the Drake TR-6. Good 6m rigs tend to be expensive, even on the used market. Swan and Heathkit tube rigs are the least expensive and can be quite usable, but you will run into problems typical of older rigs, such as drift (especially on the Swan). Drift is something you definately do NOT want during those fading Es openings. The kilowatt is quite rare on 6m. The norm for serious stations is 100 to 150 watts.

CAN I USE A TRANSVERTER WITH AN HF RIG TO GET ON 6M? Yes, but you will either spend a lot of time tinkering with a soldering iron, or you will spend a lot of money on the high-end transverters from SSB Electronics. An SSB Electronics 6m transverter fully equipped will run you $800, but may outperform most of the VHF all-mode rigs. (or so SSB Electronics claims) Some hams build transverters, but you need a good level of electronics expertise.

I LISTEN TO 6M OCCASIONALLY, BUT I NEVER HEAR ANYONE. Openings on 6m are rare when compared to the HF bands. Sporadic E (Es) is the backbone of 6m DX. (more information on Es is below) For hams in far northern latitudes (say 50 degrees and above), aurora openings are common in early evenings around the Equinoxes. F2 propagation allows world-wide communication around peak sunspot years.

HOW OFTEN ARE THERE F2 OPENINGS? F2 propagation, the kind that we know and love on 20 meters, occurs rarely on 6m. Only at the peak times of the sunspot cycle, a few years out of each eleven, does the band open up for F2. When it does happen, the band becomes a frenzy of activity, and behaves similar to 10 meters. In the last cycle, there were many openings in 1989 through 1991, but that cycle had an unusually long period of peak activity. Openings occur most often

in Autumn during the daytime. A few stations have worked 100 or more countries, but they have been patiently working the fleeting openings for many years. The March, 1993 QST magazine has an excellent article on 6m propagation that shows a correlation between solar flux and openings.

HOW IS TROPO PROPAGATION ON 6M? The ordinary ground-wave tropo range on six isn't quite as great as on two. There are a number of reasons. 702. REVIEW: Radio Shack DSP-40

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-15 22:09:08 UTC
From: randall@atlas.informix.com
Message-ID: <randall.766447748@informix.com>
Source record: 268465

Radio Shack now sells the DSP-40, a Digital Signal Processor with a 5-watt audio amplifier and built-in speaker. The price is $79.95 in the US. The catalog number is 21-543; you will need that number when you call and ask if it's in stock, because most Radio Shack personnel probably won't know what it is. (none of the ones I called knew about it) The product is not in the 1994 catalog. Some newer Radio Shack CBs will have DSP built-in to the units.

The unit is small (about the size of a paperback novel) and runs off 12 VDC through a jack in the back (fused cord included). It has an audio input jack and audio output jack, both of the standard 1/8'' mono phone type. (cord included) The input jack is designed to take input from an earphone jack or external speaker output of a radio. The DSP-40 is simple to install: just connect to power, and run the included cord from your rig's external speaker output to the unit.

There are four controls on the front: a volume/on-off knob, a button that turns DSP on or off, a bandwidth knob (three positions, WIDE, MEDIUM, NARROW), and a mode knob. (three positions: CW, SSB, NR/Noise Reduction)

For the CW operator, the unit works pretty well as an audio filter. If you already have an audio narrow bandwidth filter on your rig, this unit may not provide any more functionality. You need to tune the rig very carefully if you use this unit, especially if the unit is in the NARROW bandwidth setting.

For the SSB operator, the unit is very effective in eliminating squeals (heterodynes) caused by interference from AM stations. This is much better than the Notch filters offered on some rigs and some active filters like the MFJ filter. This is very useful for the 40m SSB operator, especially if you work mobile. You push a button, and the heterodynes go away; no need to fiddle with knobs.

For the AM operator, the unit is of limited usefulness. When the CB band is open, heterodynes (or squeals that sound like heterodynes) are a problem, and this unit can help filter them. The DSP-40 does NOT reduce engine noise for mobile operators. The unit is somewhat effective in reducing hiss. Audio quality is reduced when DSP is engaged on AM signals.

The internal speaker is pretty good for mobile operation. Its quality is about the same as the one built-in to my Icom 735.

For $79.95, this is cheaper than other DSP units. Does it provide
$80 worth of functionality? Yes, if you are a 40m SSB enthusiast.
No, if you are anyone else. It is a fun new toy to play with though,
and I am glad that Radio Shack is selling it.

John K Scoggin Jr <scoggin@delmarva.com> wrote:
>Anyone have a feel for how long licenses take to get from FCC Gettysburg?
>Last I heard it was 10 weeks :-(

I got mine in 10.5 weeks (test on January 23rd, ticket on April 5th
dated March 29th, postmarked April 1st).

The FCC touch-tone information server claims 10-12 weeks after receipt
at the FCC. You can call them at 717-337-1212. Press 2, followed by
7 and your radio district number for the last callsigns assigned in
the district as well as the current estimated processing time.

Glenn Swanson of the ARRL (KB1GW) posts the latest info to this
newsgroup when he receives it from the FCC. I maintain the latest
copy of his posting, along with possibly more up to date info for
district 2 accessible on the World Wide Web at URL:

http://www.cc.columbia.edu/~fuat/cuarc/

Hope this helps.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 15/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 15 APRIL AND FORECAST UP TO 18 APRIL

IPS Warning 11 was issued on 15 April and is still current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 080/020

1B. SOLAR FORECAST
16 April 17 April 18 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 080/020

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled

Estimated Indices : A K Observed A Index 14 April
Learmonth 13 3323 3332
Fredericksburg 14 22
Planetary 18 26

Observed Kp for 14 April: 5435 4334

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
16 Apr 20 Unsettled.
17 Apr 35 Active to minor storm.
18 Apr 35 Active to minor storm.

2C. MAGNETIC COMMENT
None.

I bought the Hostamaster for the Mac to use with both a KPC-3 and
KAM+. I used it for a week and then gave up. What the program
does it does well. The most significant feature is having separate
windows for each connection, which helps to keep things straight
if you are running a Pactor connect on HF and a couple of VHF
connects at the same time. However, there is no macro facility.
I am now using Microphone Pro, and am very happy with it's ability
to handle my needs. On those rare occasions when I have to run a couple
of connects at the same time I just have to pay a little more attention
to keeping the stream switch characters straight.

You definitely DO NOT need Hostmaster to use HF and VHF at the same
time, I do it all the time with Microphone Pro, in fact any dumb
terminal program would do it just fine, but of course without the
sophisticated macro facility.

BTW, I am very happy with the KAM+, much better than the MFJ-1278 I had.

: converting them to amateur use? It would be good to know which radios are
: best suited to amateur purposes as well as how difficult they are to convert
: and what tools/equipment is necessary. Thanks...

Tom: First off, they are easy to convert - both for transceivers and for repeaters. There are several sites on the internet with copies of articles on converting the Micors etc. The QRZ Ham Radio CD ROM I got recently at a swap meet had quite a few reference articles on the subject on it.

Retuning the beasts is the only tricky part. Invest in the service manual from Motorola - usually in the $25 range - and save yourself LOTS of trial and error. A service monitor is a real help, but can be fooled. I use my duplexers for my repeater to filter the output so I know by the watt meter when I have the tuning on the right peak and not one of the other images :) That method has not failed me yet.

You absolutely can not beat the quality of the Moto rigs - both in signal and in audio quality.

URGENT! Currently before the Executive Committee of the Illinois House of Representatives is HB3730, sponsored by Bernard Pedersen (R-54th Dist.), and titled "AMATEUR RADIO ANTENNA REGULATE", which will "prohibit counties and municipalities, including home rule units of government, from enacting or enforcing an ordinance or regulation that fails to conform to a limited preemption contained in a Federal Communication Commission order regarding antennas used by amateur radio operators."

The Bill was passed out of the House Rules Committee (Frank Giglio, D-29th, Chair). There is an Executive Committee hearing currently scheduled for Wed., April 20, 1994, at 8:00 a.m. in Springfield. Pat Kipp (N9PKH) has requested both Mr. Pedersen and Mr. Giglio (who is also a member of the Executive Committee) to postpone the hearing at least one day so that information can be disseminated among Illinois hams.

PLEASE CONTACT IMMEDIATELY ANY OR ALL OF THE FOLLOWING MEMBERS OF THE EXECUTIVE COMMITTEE AT THEIR SPRINGFIELD (AREA CODE 217) TELEPHONE NUMBERS TO VOICE YOUR SUPPORT OF THIS BILL:
Chair: Robert J. Bugielski (D, 19th), 782-0017
Vice Chair: John ("Jack") McGuire (D, 86th), 782-8090
Ralph C. Capparelli (D, 13th), 782-8198
Mary E. Flowers (D, 21st), 782-4207
Frank Giglio (D, 29th), 782-8077
E. J. ("Zeke") Giorgi (D, 67th), 782-3167
William J. Laurino (D, 15th), 782-8400
Miguel A. Santiago (D, 3rd), 782-0480
Rep. Spokesman: Jack L. Kubik (R, 43rd), 782-5821
Vice Spokesman: Margaret R. Parcells (R, 57th), 782-4194
William B. Black (R, 105th), 782-4811

Source record: 268472
Cross-posted to: rec.radio.scanner,rec.radio.amateur.misc

I seem to have a serious problem. My girlfriend mistakenly unplugged
my Pro 43 with normal energizer batteries and placed the plug in the
charge jack. To cut to the chase, my baterries leaked a bit. Fortunately
the scanner was in an upright position so it did not leak "up" too far.
I just discovered this, but decided to take off the back cover before
I proceeded. The acid has discolored the bottom circuit board (the one
on the side facing the keypad just below the battery contacts (where they
connect).

How do I get the acid stabalized and hope fully removed?

Please e-mail suggestions to me asap because our newsreader downloads news
packs once or twice a day. I believe time is of the essence.

To all radio amateurs

HAM LINK FOR SPACECRAFT

On April 13, amateur radio linked the Russian space station MIR with the orbiting US space shuttle.

By two meters, Astronaut Jay Apt, N5QWL, contacted Rita Iaquinto, VK3CFI, in Melbourne, Australia, while Russian Cosmonaut Valery Polyakov, U3MIR, hooked up with Graham Ratcliff, VK5AGR, in Adelaide.

The Australians then used a telephone link to connect the two spacecraft as both passed over Australia, at 5:36 pm Australia time.

The SHUTTLE-MIR contact was arranged by the Shuttle Amateur Radio Experiment (SAREX). The SAREX payload has flown on 12 previous shuttle flights, providing school children, ham operators and astronaut families with the unique opportunity to speak with the shuttle astronauts via ham radio.

Polyakov ended his communication by wishing Apt, and the entire crew aboard Endeavour, a safe return home. The shuttle is scheduled to land in Florida on Monday, April 18 at 12:12 pm.

See "Watson-Watt Radio Direction Finder".
Currently manufactured by AOR in San Diego CA.
The big problem is getting two (or 3 with a sense ant) receivers
to be AM gain stable over a wide AGC range. This is an AM system,
unlike doppler ADF which is FM. Also, the antennas are messy
(4 vertical dipoles in a circle).

The system is workable and with proper antenna design can cover a
wide bandwith. Again, realize that this is an AM system with AGC
and not an FM system (with limiters). Conventional FM radios will
NOT work.

Hi. I'd appreciate some pointers as far as the relative quality of dual band handheld transceivers. I've seen units by Yaesu, Kenwood, and Icom (the FT-530, TH78A, and IC-W2AT). And I was wondering if there were significant differences in the relative quality of them. I'd like to hear from people who have experiences with dual band units by these manufacturers.

-I picked up a Realistic HTX-202 2m HT over the weekend (my first rig),
-but have been getting comments that my audio is weak.

A friend just got one with the same problem (in MA). The deviations was set
way too low. The audio deviation pot is RV1, just to the right of the VCO
shield. Remove 5 screws from the back and four from the battery slide. Remove
the battery slide locking tab and battery release. Open the radio, being
careful not to damage the flex connecting the two case halves. Looking at the
component side of the half not attached to the front, find a large metal box
near the bottom. RV1 is the upper of two adjustable components just to the
right of it. Adjust it counter-clockwise to increase the deviation.

/mike

PS, there are no out-of-band rx or tx mods for this radio...

: 73 de KB2PWM

I tried using several different terminal emulation programs with my KAM,
but in order to use the "simultaneous" capability, you need to have some
software that utilizes the KAM's "host mode". HostMaster for Mac does.
In the DOS world, there are the HostMaster+ (for DOS) and I think KA-GOLD
and maybe others that will work. I do not know about other s/w for the
Mac that will do it. I use HM for MAC and am completely satisfied with it.

I have used the Hostmaster for Macintosh since it first came out and
with the latest version - I understand it even supports G-TOR. The KAM and
KAM+ are the "only way to go" if you want to monitor DX PacketCluster on
VHF and still be able to work any of the digital modes (incl. CW) on HF.
HostMaster for Macintosh was written by Kevin Krueger - N0IOS. I believe
you can order it from either KANTRONICS or directly from Kevin - but I
would suggest you ask him directly.

Kevin also puts out a wonderful contest logging software program
called MARATHON which I do know is available directly from him.
Here's his address:

Kevin Krueger - N0IOS
1780 Ruth Street
Saint Paul, MN 55109 USA

I am obviously an enthusiastic supporter of Kevin's efforts - especially
since he is one of the few guys around who is writing good software for
use by us Hams with Macs. I also had the pleasure of meeting him once
during a trip he made to California - like most hams - he's "good people"
too!

NOTE: The Effective Sunspot Number for 14 APR 94 was 11.9.
The Full Kp Indices for 14 APR 94 are: 5+ 4- 3+ 5- 4o 3- 3+ 4-
The 3-Hr Ap Indices for 14 APR 94 are: 56 21 17 38 27 13 18 21
Greater than 2 MeV Electron Fluence for 15 APR is: 1.2E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low. Only one B-class sub-
flare was observed at 1801Z from Region 7701 (N07W20). Region
7701 has rotated into view as a small D-type sunspot group.

Solar activity forecast: solar activity is expected to be
very low.

STD: Another full-disk Yohkoh x-ray image has been appended to
this report.

The geomagnetic field was at quiet to active levels during
the past 24 hours. The greater than 2 MeV electron flux was
at moderate to high levels.

Geophysical activity forecast: the geomagnetic field is
expected to become disturbed about mid-day tomorrow as a re-
sponse to yesterday's coronal mass ejection. Activity is
expected to be at mostly minor storm levels once the transient
hits earth and is expected to remain disturbed through the
third day.

Event probabilities 16 apr-18 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 16 apr-18 apr

A. Middle Latitudes
Active 25/20/20
Minor Storm 35/35/35
Major-Severe Storm 15/20/20

B. High Latitudes
Active 20/20/20
Minor Storm 35/30/30
Major-Severe Storm 20/30/30

HF propagation conditions continued below-normal but are
gradually returning to near-normal. Near-normal propagation is
not expected to be achieved before the anticipated disturbance
noted above arrives later on 16 April or on 17 April. Poor to
occasionally near-useless propagation can be expected over the
high and polar latitude paths while middle latitude regions
should observe fair to occassionally very poor propagation
following the arrival of this disturbance. Lower latitudes are
not expected to be strongly affected, but will still suffer
from the weakened state of the ionosphere with increased
susceptibility to fading and MUF depressions.

I have one of the HTX202s here and use it frequently for mobile operation (using an external whip on my truck). As far as I am concerned it works fine. I have also used HTX202s for packet operation. Based on my experience with the 2 meter rig I am very tempted to take advantage of this sale to get onto 70 cm.

I own a second HTX202 which I left behind in Nicaragua, where it has been providing one end of a packet radio data link between the campuses of the National University and the National Engineering University. It seems to have been working fine in a more or less unattended situation for four months now. A colleague at the Engineering University, YN1TV, has been monitoring the operation and has reported no problems in the r.f. link. In this application the h.t., an a.c. power supply, and a KAM are locked in a drawer and operating continuously (except when the a.c. power fails, which is fairly frequently).

While I was in Nicaragua I used the other HTX202 from my home location (YN1ASW) for packet communication with the university nodes. In this setup I used a Poor Man's Packet (PMP) TNC-less system.

I have never noticed the audio problem that some have mentioned with these units; in any case I understand that it can be fixed easily.

First of all, thank you Randall for a very informative article!

Now, someone please tell me the advantage of grid squares over just using one's latitude and longitude. With lat. and long. given I can immediately get a mental picture as to someone's QTH and even their climate, based mainly on lat. although land mass must be considered, too. For example, if I told you that I'm at 22N 158W you would immediately know that I am within the northern tropics in the Central Pacific, and my climate is dictated by the NE trade wind belt, AND you'd also immediately know my time zone.

Do grid squares provide the same quick mental information without having to `decode' them by referring to a map of grids?

Jeff NH6IL

QST de W1AW
DX Bulletin 20 ARLD020
>From ARRL Headquarters
Newington CT April 14, 1994
To all radio amateurs

SB DX ARL ARLD020
ARLD020 DX news

The items in this week's bulletin are courtesy of Bob, WB2CJL, Joyce, WB9NUL, Frank, AH0W/OH2LVG, Jay, AF2C, Pat, G3IOR, the Yankee Clipper Contest Club PacketCluster network, and Contest Corral from the pages of QST. Thanks.

RWANDA. Paul, F6EXV, has been evacuated from Rwanda and is safe in Burundi. He had been operating as 9X5DX. Paul was active from 7O several years ago, and was the equipment benefactor for 7O1AA. Plans are for Paul to move on to Kenya around the time this bulletin makes its way to the airwaves.

YEMEN. Be leary of any 7O station operating CW. Pat, G3IOR, reports that the only activity from Yemen is on SSB, that being Ahmed operating 7O1AA. Check the Arabian Nights and Family Hour nets, 14226, 14243 and 14250 kHz. Ahmed also chats with Zedan, JY3ZH, around these frequencies. QSL via PO Box 485, Aden, Yemen.

ON THE TRAIL OF ZL1AMO. Ron, ZL1AMO, will be active soon as 3D2RW, with the hopes of moving on to C21, T28RW and ZK3.

VATICAN. Listen for Bob, N2EDF, operating HV4NAC until April 19.

JORDAN. Ibrahim, JY5IN, sometimes checks into the DX net on 14243 kHz at around 0615z. Also try 14247 kHz at 2230z.

ALAND ISLAND. Pete, OH3MEP, will be active as OH0MEP for a week starting April 16. Around the same time, listen for OH0NLP, OH0LQK, OH0LIU, OH0LYA and OH0KAG. Between all these stations, CW, SSB and RTTY will be used on all HF bands. Some satellite activity is also planned.

SINT MAARTEN. From May 24 to 30, Chod, VP2ML/WB2CHO, and Frank, AH0W/OH2LVG will be signing PJ7/WB2CHO and PJ7/OH2LVG respectively. They will team up to operate in the CQ WPX CW Contest as PJ8X. QSL PJ7/WB2CHO via K1RH. QSL PJ7/OH2LVG and PJ8X via KE7LZ.

FIJI, TONGA AND WESTERN SAMOA. JR7OEF will be active from these South Pacific locations. The tentative schedule is April 29 and 30 as 3D2EF, May 2, 3 and 4 as 5W0NI, May 4, 5 and 6 as A35NI, and May 7 and 8 as 3D2EF. QSL via JR7OEF.

ANTARCTICA. Gavin, VP8GAV, is active from the British base of Rothera. Check between 3500 and 3506 kHz around 0515z, and again between 1015 and 1100z. His 20 meter haunts are 14017 kHz CW at 0030z and 14245 kHz SSB. QSL via GM0LVI.

GHANA. Peter, ex XT2BW, is active as 9G1PW and was heard on 21297 kHz at 1428z. QSL via WB2YQH.

NEPAL. Marlo, IK3HAQ hopes to be active until April 24.

SAINT PAUL ISLAND. Operators KW2P, WA4DAN, AA4VK, N0TG and possibly W0RJU plan to be active for the first week of July. This is the same group operated from KP1 and KP5 in 1992 and 1993. Landing permission and transportation have been secured.

PETER ONE ISLAND QSLS. Cards for the recent 3Y Expedition are being printed in Belgium and will be shipped to the states soon. Jerry, AA6BV, states that label printing is about 75 per cent complete, with final mailing planned for sometime in May. Please note to QSL SSB contacts via AA6BB. CW and RTTY cards go via KA6V.

ON A SAD NOTE. QSL Manager Joyce, WB9NUL, reports that HK0BKX is now a Silent Key. Francisco provided countless DXCC credits for San Andres Island.

THIS WEEKEND ON THE RADIO. Check out the SARTG World Wide AMTOR Contest, sponsored by the Scandinavian Amateur Radio Teleprinter Group. It runs from 0000 to 0800z and 1600 to 2400z on April 16, and 0800 to 1600z on the 17th. Exchange RST, name and QSO number starting with 001. Use FEC, mode B, for calling and ARQ, mode A, for exchange. For more info see page 121 of March QST.

Hi. I'd appreciate some pointers as far as the relative quality of dual band handheld transceivers. I've seen units by Yaesu, Kenwood, and Icom (the FT-530, TH78A, and IC-W2AT). And I was wondering if there were significant differences in the relative quality of them. I'd like to hear from people who have experiences with dual band units by these manufacturers.

Daniel Shields, VE3EOP
pone@scilink.org

--

Including my experiences/eavesdropping:

I started with a Yaesu FT-411E 2m for two years, and really enjoyed it. When I moved up to dual-band needs, I picked up an FT-470. That served me well.

Then, when I finally wanted to trade up to something smaller, I first played with the W2A, but found the user-interface a bit confusing (having some bias with Yaesu). I also didn't see anywhere in the manual the ability of the W2A to perform automatic repeater offsets.

I heard many rumors that the modern Kenwood HT line suffers severely from intermod/interference. They are feature-laden radios, but sensitivity suffers.

I ended up picking up an FT-530, and really enjoy it. The display backlighting is absolutely wonderful, the user-interface is easy to use, and the radio is nice and small. I personally really enjoy dual in-band receive (vhf+vhf or uhf+uhf simultaneously), along with auto repeater offset.

With modification, it can receive 110-180, 400-500, and 800-950 Mhz. There is an AM detector, but it must be toggled manually. (Why, Yaesu?)

In the Greater Boston area, there is some interference to the 440 side, since there is a lot of 450+ Mhz commercial activity.

Hope this helps.

73,
Scott, WY1Z

724. Proposed Illinois law to pre-empt antenna restrictions

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-16 17:54:44 UTC
From: little@iamu.chi.dec.com
Message-ID: <1994Apr16.175444.11092@nntpd2.cxo.dec.com>
Source record: 268337

TO ALL ILLINOIS HAMS. Priority: URGENT.
From KA9BBV
Subject: Making PRB-1 Part of Illinois Law.

House Bill # 3730 to incorporate the preemptions of PRB-1 into Illinois
law is coming up for a vote in Executive Committee on
April 20th. This is similar to what Florida has done for hams there.

Call the following members of that committee
and urge them to vote "YES" on HB 3730.

The law, if it passes, will prohibit counties, municipalities (including
home-rule units of government) and other local governing bodies from
enacting or enforcing an ordinance or regulation that does not
conform to the preemptions in an FCC order regarding antennas used by
amateur radio operators. (PRB-1).

NAMES, CITIES, PARTY, DISTRICT, SPRINGFIELD #, LOCAL # follow in that order.
All Springfield #s are area (217) and have a prefix of 782-xxxx.

Chair; Robert Bugielski (Chi, D 19) -0017 (312) 637-8770
Vice; John McGuire (Jol, D 86) -8090 (815) 722-0083
Ralph Capparelli (Chi, D 13) -8198 (312) 775-5775
Mary Flowers (Chi, D 21) -4207 (312) 874-5200
Frank Giglio(CalumCit, D 29) -8077 (708) 891-9181
Paula Raschje-Lind (Rockfrd, D 67) -3167 (815) 987-7433
Wm. Laurino (Chi, D 15) -8400 (312) 736-5594
Miguel Santiago (Chi, D 3) -0480 (312) 486-6488
Jack Kubick (Rivrsde, R 43) -5821 (708) 442-0149
Kevin Hanrahan(Glenvw, R 57) -4194 (708) 724-3233
Wm. Black (Danville,R 105) -4811 (217) 431-1986
Thom. Johnson (W. Chi, R 50) -1607 (708) 231-0340
Larry Wennlund (New Lenox, R 38) -0424 (815) 485-4666

ACT NOW! TIME IS SHORT! Call ALL of them!
Local communities frequently impose unrealistic antenna restrictions
in violation of PRB-1. Having this law on the books will be a help.

This file taken in whole from a message entered by KA9BBV @ WB9HMD.

>Question: What would be the best band for radio communication inside
>of caves. I've only tried 2 meters at 5w and had limited success.
>Would 6 meters be any better, 10 meters? On two meters I can get
>reasonable propagation down long tunnels and through a squeeze or two.
>I'm assuming that the signals are doing a lot of bouncing around off of
>the rock walls down there. Also, some caves seem to be a lot better
>then others.

I once saw a documentary on TV where they were modulating a magnetic field
(an electro magnet). They said that magnatic flux travels better through
rocks than RF.

Yes, the latest Hostmaster for the Mac is supposed to support G-TOR, according to some flyers which Kantronics mailed me. I have ordered it, through the very generous Kantronics program where they will upgrade your goodies (firmware or software) for free if you can show a proof of purchase that you had bought it no earlier than one month before they announce a new feature. G-TOR was announced on March 1, 1994. So, if you had bought a KAM Plus or Hostmaster software after February 1, 1994, it may be worth giving Kantronics a call to see if you can get a free upgrade (but wait until they ship me my upgrade first :-).

I first read of G-TOR in the March issue of the RTTY Journal. I don't know any more than what I read there, although I have started hearing what sounds like undecodable PACTOR signals on 20m, but with longer ISS-IRS ARQ periods.

I haven't been using the KAM Plus or the Hostmaster for long. So far, however, I do like the combination better than my PK-900/MacRATT setup. Either setup is, in my opinion, far superior for HF weak signal work than the MFJ-1278, which I used to (emphasis on past tense :-) use.

The PK-900 has a far superior tuning indicator than the KAM. With the KAM, I am never sure when I am perfectly centered. However, even with that drawback, the KAM Plus still *seems* much less prone to switching into NUMS shift on weak RTTY signals. I have not yet done a comprehensive (like running them side by side, or recording a signal and playing it back to both units) test to give any definitive impression.

The MacRATT program really needs to be revamped so that it displays what you type ahead while copying the other end of the QSO. With the Hostmaster, what you type ahead goes into a different window from the main window. When you finally push that transmit button, what is transmitted is transferred in bold face to the main window.

A0-21 is just like a repeater. Who ever has the strongest signal has the
repeater. It's a fact of FM. I've ofter heard around after 00:00 mobile
operators on the bird. After midnight there are usually less operators
trying to get through.

Good luck

>on 10 while mobile?

Jason --

I haven't actually operated mobile, but when I was first licensed a couple of years ago, I got my ticket sooner than anticipated (that's a switch, I know) and didn'
t have an antenna up, so I went out, cut down an old CB whip to make it resonant on 10 meters, ran some coax out the window to my car, and operated sort of semi-mobile for a couple of weeks until I could get a "real" antenna up. I worked all continents except Oceania (including Japan and the Russian Far East) with that set-up. Of course, conditions were better then on 10 meters than they are now.

Timothy --

I've never tried spelunking, much less spelunking and hamming at the same time, but I suspect you'd be better off with something in the 1.2 GHz range than attempting to go lower in frequency. I've never operated it, but I understand that 1.2 GHz is popular in places like New York City, because of the tendency of emissions of this frequency to bounce around inside of a skyscraper until they find their way out. But don't go out and buy new gear on my say-so!

From: clinehe@cherokee3.rtsg.mot.com
Message-ID: <2opihe$66n@delphinium.cig.mot.com>
Source record: 268346

Since the phones are FM the capture effect comes into play. That means the user with the stronger signal will capture the uplink receiver at the cell site effectively blocking any other signals. Of course if the two signals are pretty close in strength, fading effects (Raleigh, etc) will cause the receiver to flip back and forth between the two phones, making for some bad interference. If this continues long enough (10-15 seconds) one or both calls would be dropped.

In general cell phones work just fine when your hitting multiple cells because your signal at your assigned cell is stronger than any others at the cell. To insure this, the site planners don't reassign the same frequency for reuse any less than 4 to 7 cells away which works well for terresterial signals.

BTW, a boat based phone on a big lake like Michigan anywhere near Chicago, or on costal waters, say around NY or LA, is hitting multiple cells as in the airplane case.

This is exactly the sort of reaction I predicted. My software is NOT
broken - it operates differently from yours. I have accepted that it
operates differently and that I need to compensate for that by having
more disk space available.

Sure, if I threw away my computer, converted to Unix, and got cnews
running, I could avoid all that. For lots of reasons I'm not going to do
that, and neither are lots of others.

Condescending attitudes like this aren't at all helpful to anyone.

Just a quick comment.

From a long-range legal perspective, I see this sort of law as possibly detrimental to our antenna rights as hams.

To have a State legislate that its own arms of government should not violate Federal Law is a funny concept, and may keep the focus off the more important (and permanent) solution: Federal enforcement.

I worry that in the long run, the State laws and efforts may keep the focus away from the real issues - that States and municipalities have absolutely NO business legislating either for or against amateur radio as it is Federally constituted.

What would be ideal in my opinion is that some State legislates AGAINST amateur radio in a clear violation of Federal Law, then have a Federal Court rule against them. If the Supreme Court ever ruled in our favor then that would probably be the END of the whole mess for us. (Yes, could be a high price and long wait for the hams under the gun of the law and the financial burden of the case, but in the ideal situation it would solve the problem.)

Just my two cents.

The Following is a QST

The ARRL looses the first round in its advertising feud with
the Lambda Amateur Radio Club, the FCC eases the rules on
automatic digital communications and more license downgrades may
be on their way in California. These stories and more on
Newsline report number 870 coming your way right now!

(*****
LAMBDA vs. ARRL

The Connecticut Commission on Human Rights and Opportunities
has announced that it has reasonable cause to believe that the
American Radio Relay League has discriminated against a gay ham
radio club. This, when the League refused to publish the gay
club's notices in the classified advertising section of its QST
Magazine.
In a March 18th initial decision on litigation brought by the
LAMBDA Legal Defense and Education Fund, the Commission affirmed
the case investigator's finding that ARRL's refusal to publish
the LAMBDA Amateur Radio Club ad was motivated by the club
member's sexual orientation. The hearing board refused to accept
the Leagues defense that it excluded the ad because the group is
issue oriented. It was noted that while the ARRL has refused to

publish LARC's ad for nearly ten years, it has continued to publish classified advertisements for other ham radio clubs including Jehovah's Witnesses, missionaries and animal rights groups. The Commission held that the issue in this instance is clearly the fact that LARC's members identify themselves as being Gay.

LAMBDA President Jim Kelly, KK3K has issued a statement saying that in his view the time has come for responsible individuals at the ARRL to publicly acknowledge the unfairness of their past practices, adopt and publish a non-discrimination policy which includes sexual orientation, and to work with LARC in the spirit of cooperation and good will which has always characterized the amateur radio service.

There has been no comment on the Commission finding nor any response to Kelly from the ARRL or its legal staff. None is expected until after a full hearing on the case that is now scheduled for sometime in June and any appeals that will most certainly follow, no matter which side is victorious in the hearing room.

(*****

COMMISSION AMENDS RULES CONCERNING MESSAGE FORWARDING

The FCC has relaxed the amateur service rules to enable modern message forwarding systems to operate at hundreds of characters per second while retaining safeguards to prevent misuse.

To the FCC, a message forwarding system is a group of amateur stations participating in a voluntary, cooperative, interactive arrangement. Under such a plan the communications from the control operator of an originating station are transmitted to one or more destination stations via forwarding stations, which may or may not be automatically controlled. Currently, the control operator of each station is held individually accountable for each message retransmitted, resulting in unnecessary content review and delays. In a filing on the matter, the American Relay League stated that the obligation of the control operator of the first forwarding station should be the establishment of the identity of the station originating the message. Only when this is not done should these control operators be held accountable for improper message content.

Also, there is currently no central supervisory authority in an ad hoc amateur service digital network, making these unsupervised systems easy targets for misuse by uncooperative operators and non-licensees. The Commission says that it could be difficult to establish after the fact that a particular VHF station originated a fleeting high speed digital transmission. For these reasons, the Commission said there must be on-going oversight of the system and the control operators of the first forwarding stations are in the best position to exercise such

control.
The Commission also clarified that the station that receives a communication directly from the originating station and introduces it into the message forwarding system is the first forwarding station.
Additionally, the ARRL and the Colorado Council of Amateur Radio Clubs suggested that the Commission substitute the word "simultaneously" for "instantaneously" in the redefinition of a repeater. The Commission concurred and adopted this modification.
The FCC says that these rule changes will enable contemporary high speed message forwarding systems to operate as their designers intended, while retaining the minimum safeguards necessary to prevent misuse. The action to amend the rules took place on March 30th by Report and Order. No effective date for the new rules to take effect has yet been announced.

(*****
BAXTER TARGET OF PHONY PACKET

The new rules concerning automatic message forwarding are already being tested by another of those phantom hams who seem to exist only as a derogatory packet radio posting. Almost as the FCC was issuing its notice easing the rules dealing with automatic message forwarding a phony message targeting International Amateur Radio Net manager Glenn Baxter, K1MAN appeared on a suburban Chicago packet bulletin board. The message originated in Winnetka, Illinois and indicated that the Drug Enforcement Agency or DEA was monitoring various ham radio communications including bulletins issued by Baxter and his IARN service.
The All United States posting was signed with the name Hal and the call sign WA9PVJ. Newsline checked the latest Sam Call Sign database. Guess what. There is no such person as Hal or call sign WA9PVJ listed. Nor does WA9PVJ appear in our latest printed callbook directory.
This would seem to be another case of a packet radio SySop being victimized by a person hiding behind the anonymity of a keyboard and radio while putting the ham license of the SySop in jeopardy.

(*****
CAL VE SCAM UPDATE

A second wave of letters from the FCC may soon be on their way to hams thought California telling them that their license upgrade or entry level examination credit is no good. This following the news last week that some seventy California hams have already been notified that examination credits previously earned have been disallowed because the examination sessions themselves are suspect.

Under Section 97.509 of the Amateur Service Rules the FCC has the right to unilaterally invalidate any test session where it felt that the integrity of the test may have been compromised. There is no appeal.
The commission also has the right to direct that candidates at these test sessions appear for retesting on or before a pre-determined date. If a person so ordered fails to take a retest the FCC can cancel the upgraded operator and station licenses of that applicant. In an instance of such a cancellation, the person will be issued a new operator and station license consistent with previously completed test elements that have not been disqualified. If the elements disallowed are for entry level licenses like the Novice or codefree Technician, the applicant will automatically loose all operating privileges and will essentially become a non-ham.
If the FCC holds true to form, the next step in its clean-up of the statewide California VE testing scandal will probably be the issuance of either Notice of Apparent Liability to Monetary Forfeiture, license suspension, Show Cause orders or both against those that the FCC suspects to be the masterminds behind the testing fraud. And because of the number of licenses alleged to have been issued under the various schemes there is a better than even chance that the FCC will approach the Department of Justice seeking criminal complaints as well.
True, a good part of this is supposition on our part but it comes from years of watching the FCC and the way in which the government reacts in situations like this. Its also widely held that the All-Volunteer testing program is a kind of sacred cow to the staff at 1919 M Street in Washington, DC. Those who violate its sanctity are shown little leniency by the FCC.

(*****
TRIAL UPDATE

This an update to last weeks report on a decision by an Orange County Superior Court that it had the jurisdiction to hear a civil case involving amateur radio. As a part of the evidence accepted in making his decision to hear a petition for a restraining order by the Claremont Amateur Radio Club against Anthony Cardenas, WA6IGJ and Drew Feldman, N3KSO, Judge Robert Hutson held in part that this authority was delegated to him by the FCC part 97 rules themselves.
We have since learned that the rule in question was Section 97.113 subpart d. Apparently Judge Hutson and everyone else involved in the case believed that the regulation stated in part that no station shall transmit music, radio communications, or messages for any purpose, or in connection with any activity that is contrary to federal, state or local law. That wording would seem to give the state some small amount of jurisdiction in matters of content of ham radio communications to local governments. Judge Hutson cited it to deny a motion by Cardenas

and Feldman to change the venue of the case into a federal court. But what slipped by everyone including the judge, the attorneys, the plaintiffs, the defendants, the media and even the ham radio public was one fact. The fact that this is no longer the wording of section 97.113 subpart D. At the request of the American Radio Relay League and others, Section 97.113 D was changed late last year.
Remember all the hoopla surrounding the so-called Pizza Ordering rule? The rule that prevented hams from doing any kind of business over the air. That too is a part of section 97.113 of the rules. And when the restrictions business communications were changed it was also decided to delete any reference that might give state or local governments any jurisdiction over ham radio. The only person who noticed the error by the court was W5YI Report publisher Fred Maia.

"That was changed a year ago, almost a year ago. Actually the rulemaking started in 1992 when the FCC decided that perhaps that might be misinterpreted and they clarified it by changing communications which might be contrary to Federal, State and local law. They changed that to communications which might facilitate a criminal act." Fred Maia, W5YI.

Fred picked up on the courts mistake easily because he is involved with the part 97 rules on a day to day basis. In addition to his newsletter, Fred also runs the W5YI Volunteer Examination Coordinator, the nations second largest VEC operation.
The question now is what will happen next. Will the restraining order against Cardenas and Feldman be automatically vacated. We consulted with our own legal correspondent Joe Merdler, N6AHU. Joe is now retired from active practice but still keeps his ear to the law. He says that in all probability, unless there is an appeal by the defendants, that under California civil law the judgment will stand as it is.
So it would appear that the next move is up to Feldman and Cardenas. Newsline has attempted to contact both parties but has yet to hear from either one. As reported last week Feldman has been quoted publicly on a local repeater as saying that he intends to appeal the judgment. Whether either man will do so is at this time unknown.
Meantime, if your copy of the Amateur Radio Rules and Regulations is dated 1993 or earlier, we might suggest you getting a new copy. Especially if you have to use it to defend yourself in a court of law.
More on this story as it develops.

(*****
BLEVIN ASSUMED POSITION OF CHIEF OF THE ENFORCEMENT DIVISION

Still on the regulatory front, word that Lauren "Pete" Belvin has assumed the position of Chief of the Enforcement Division of the FCC. Blevin replaces Mary Beth Richards who has accepted a position on the staff of FCC Chairman Reed Hunt.
Blevin is described as a skilled government investigator with good knowledge of the problems facing all private radio services, including those of Amateur Radio.

(*****
STS-59 SAREX MISSION UNDERWAY

On Saturday April 9th, the Space Shuttle Endeavour rose into the early morning skies of the Kennedy Space Center signaling the beginning of yet another manned Amateur Radio mission in space. This one known as shuttle flight STS-59. The spectacular, on-time launch occurred precisely at 7:05 Eastern Daylight Time. SAREX, The Shuttle Amateur Radio Experiment was activated approximately 3 hours after liftoff with a check pass while over San Diego, California.

(*****
AA8FQ SUCCESS RUN

Now a follow-up to our Los Angeles Marathon story of a few weeks ago about runner Fred Doob, AA8FQ. We are pleased to tell you that Fred raised more than $2000 for the Childrens Cancer Research Fund while running the twenty-six mile event. AA8FQ made more than 400 contacts on 144 and 440 MHz using an Icom dual band hand-held transceiver. Icom donated five dollars to the research fund for each contact made.
Doob, 47, topped his run last November in the New York City Marathon by 100 contacts and bettered his time by 15 minutes. He says that he averages about 3.5 hours in a marathon without radio but the same run takes about 5 hours when he operates.
The race was televised in Los Angeles by Chris-Craft station KCOP television channel 13. KCOP news also did a profile of AA8FQ's run for charity the evening of the marathon that included tape of him, at the finish line, and inside the Amateur Radio communications tent that's used to run several nets in support of the annual event.
AA8FQ's on-air operation was coordinated by the Baldwin Hills Amateur Radio Club and organized by its President Ed Walker, WA6MDJ. Fred's principal net control was Keith Glispie, WA6TFD. Glispie will be on hand at the 1994 Dayton Hamvention Media forum on Sunday May 1st to tell about the association of his radio club with Doob and the marathon race.

(*****
DX OPERATION TO MALTA ON ICE

In DX, word that the 1A0KM, Sovereign Military Order of Malta operation is on ice. "The DX Bulletin" reports that the

operation has been postponed indefinitely due to restrictions
imposed by the enclave's managers. This is more bad news for
this DXCC country which is ranked 20th on the "Most Wanted List"
of DX countries.

(*****
NOSE OBIT

We are sad to report that famed DXer and humanitarian Katashi
Nose, KH6IJ is dead. Nose, age 79, passed away April 7th in
Honolulu, Hawaii following the second in a series of debilitating
strokes.
First licensed sixty-one years ago as K6CGK, Nose was a
graduate of the University of Hawaii and spent much of his adult
life as an educator. On Kauai, KH6IJ enjoyed a superb DX
location and access to an antenna test range that he used to
develop his own beam type antennas. His design was so successful
that it was carried in the ARRL Antenna Handbook for years.
But there was another side to KH6IJ. That of a kind and
loving human being. One of those who knew him best is the former
editor of QST magazine's YL column, Ellen White, W1YL.

"We first met in Hawaii when my husband Bob W1CW and I worked
in broadcasting and we kept in contact over the years. For many
years Bob and I worked for the ARRL and in our professional
contact we always were in touch with Nose and we got to know him
and his family on a very personal level.
When he studied at Harvard he also considered enrolling his
daughter Frances at the College of Boston. His daughter Frances
became like a member of our family and every school holiday she
came to visit us. This gave a very warm and close relationship
with the whole Nose family." Ellen White, W1YL.

Others we spoke to including Westlink Radio Network co-founder
Bill Orenstein, KH6QJ agree that the passing of Katashi Nose,
KH6IJ, leaves a gap that can not ever be filled.

736. Re: Proposed Illinois law to pre-empt antenna restrictions

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-16 21:25:10 UTC
From: turner@safety.ics.uci.edu
Message-ID: <2opl3m$7mi@safety.ics.uci.edu>
Source record: 268352

One more thing.....

I believe it would be a GOOD thing for States and municipalities to legislate WITHIN their own realms CLEARLY on the topic of the safety of radio towers and the regulations to get permits. This is the job of the State and it needs to legislate there. If a law is proposed to clarify such regulations and to give the ham a fair shot (according to the latest and best interpretation of PRB-1) at specific height limitations, etc., they might help the situation. However, the FCC never really gave us a handle on that with PRB-1, the text gives no clue on what constitutes "reasonable", and thus a lot of Court cases running around.

Shoot, if I was on the Supreme Court, I'd fix this mess and we would all enjoy a more realistic balance of Amateur Radio antenna rights versus the health and safety of the public.

> area, the FM portion of 6m may be just the solution you need.

Here in northern NJ there are at least 6 repeaters I can hit with
my 50 watt TS-690 on 6M. Most require the tone (PL) to activate.
Many of these repeaters are crossband linked to 440 machines also.

The recent introduction of several new 6m units, an HT and a
mobile 6M FM units by Azden and the new TS-60 by Kenwood should
do alot for 6M FM operation (as well as other modes).

> ARE REPEATERS USED? There are a few 6m repeaters listed in the ARRL
> Repeater Directory, but some of them are not operational. This will
> depend on your area. The offset in the U.S. is usually one MHz.
> (e.g. 53.330 out, 52.330 in)

See comments above. From my on-the-air testing the 6M repeaters
in NNJ seem to be there.

> DO I NEED A BEAM ANTENNA? If you want to work DX, yes. You can
> have fun with a vertical during openings,

All I'm using for the moment is a 6M vertical J-Pole that is
made completely out of RG-58.

> WHAT RIGS ARE USED? Probably 50% of the active stations have 80 to
> 150 watt output, either from old Icom 551D s (the 551 is 10W), or
> from solid-state (brick) amplifiers following the many types of 10W
> rigs, such as the Yaesu Ft-620B or the Kenwood TS-600.

If you are in the market for a new HF rig (as I recently was) opting
for a rig with 6M doesn't add additional cost anywhere near as much as
buying a separate 6M rig would. Check out the incremental cost
difference between the TS-450S (HF, no 6M) and the TS-690S (same
rig as the TS-450 but with the 6M band, all modes).

I have not heard of an e-mail online callbook, though that is a great idea. The following three sites have telnetable online callbooks. Note that you must telnet to the right port in order to access the callbook. See your telnet documentation if you aren't sure how to specify the port on your host.

Where	Domain Name	Port
SUNY Buffalo	callsign.cs.buffalo.edu	2000
RISCnet	ns.risc.net	23 (login "hamradio")
Univ. Southwestern Louisiana	pc.usl.edu	2000

there was a short little article in thismonths/last months Camcorder
magazine that talked about ATV.

any comments on the subject? I know almost nothing about HAM, but I
may have a Cable access TV show within a year or so, and am
wondering of other ways of getting it out.

Greater than 2 MeV Electron Fluence for 16 APR is: 3.6E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. Only a few B-class flares
occurred during the period.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field ranged from quiet to minor storm
levels during the past 24 hours. During local nighttime hours
(15/2100 - 16/0900Z) the field was at active to minor storm
levels with some high latitude major storm periods. Conditions

moderated thereafter until about 2030Z when a marked increase to strongly active conditions occurred. This may mark the arrival of Thursday's coronal mass ejection.

Geophysical activity forecast: the geomagnetic field is expected to be at mostly minor storm levels for the next two days: conditions are likely to intensify during local night-times with some periods of major storm levels, and are likely to moderate somewhat during local daytime hours. Conditions should subside to predominantly active by the third day.

Event probabilities 17 apr-19 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 17 apr-19 apr

A. Middle Latitudes
Active 20/20/40
Minor Storm 35/35/20
Major-Severe Storm 20/20/10

B. High Latitudes
Active 20/20/35
Minor Storm 30/30/20
Major-Severe Storm 30/30/15

HF propagation conditions returned to near-normal over the middle and low latitudes today, while high latitudes continued to see minor signal degradation (although marked improvement over conditions observed during the last week). Late in the UTC day, geomagnetic and auroral activity again began climbing in response to a suspected coronal mass ejection on 14 April. Propagation is expected to again become moderately to strongly degraded over the high and polar latitude paths and moderately degraded over the middle latitude regions. Conditions should then begin improving by 19 April. This should mark the arrival of a longer-term period of quieter conditions and more stable communications, until early May when the recurrent long-duration disturbance observed over the last two weeks should return.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Amateur TV exists and seems to be growing in popularity. ATVers primarily communicate two-way with other amateurs. ATV can be used in that role as a sort of video phone over the air. One-way communications (transmitting a signal that isn't part of a conversation) is restricted to only certain special cases, and broadcasting is prohibited. Ham transmissions must give station identification a bit more than once every 10 minutes, and no music is allowed. The hams involved may not gain pecuniary benefit from the transmission, so any sort of business communications is out, period.

ATV is not conventional commercial or public TV broadcasting. I think ATV will not be of much use to your cable TV show.

If ATV sounds like fun anyway, you should get your Technician class ham license. It's the usual entry-level license these days. Books to introduce you to ham radio and prepare you for the license exam are available from Radio Shack, bookstores, and ham radio stores.

751. Luck Hurder ... gone:(Why?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-17 10:23:00 UTC
From: FISHERB@a1.mec.mass.EDU
Message-ID: <01HB9U9AAQFE000B36@mr.mec.mass.edu>
Source record: 268366

The following was posted on the DX Cluster which ALL hams may find interesting:

From: KZ1Z Date: 17-Apr 0217Z Subj: FYI - ARRL
It is with sadness that I advise the net members of a recent personnel change at the ARRL HQ. Luck Hurder - KY1T, Deputy Manager for the ARRL's Field Services Department, was dismissed, this week, by the ARRL management over a newly enacted policy issue. In my view, the handling of this matter by the ARRL was unfortunate for all amateur radio operators. We have been told many times by the leadership that, "the ARRL is US", so it is up to US to make sure that the ARRL understands our displeasure with their actions on this issue, or any other matter, with which we have a concern.

Luck Hurder, KY1T, has been a licensed radio amateur since 1970, when his callsign was WN4SNT. He climbed the licensing ladder to Extra Class later receiving the callsign of WA4STO, while he was a professional CW/Amtor operator for legendary WCC on Cape Cod.

Luck's Amateur Radio interests include the Amateur Satellite Service, packet radio, AMTOR and high speed CW traffic handling. He devotes a considerable amount of time answering questions on various commercial e-mail systems, in addition to being been the SYSOP of the multi-line ARRL BBS, helping individuals become interested in, licensed, and active participants in the Amateur Radio Service. DXers should also be aware of his many contributions in support of the W1-QSL Bureau and helping to knockdown the famous DXCC QSL card backlog, that plagued the ARRL for years.

Luck also has a strong interest in developing methods for the handicapped to utilize computer technology, Amateur Radio, and whatever it takes to open up new doors and windows in their lives.

I personally have known and worked with Luck for many years, since my days as Section Manager for Connecticut, way before he was solicited to come to Headquarters to work. His contributions to the hobby and to the quality of life for all of those who have benefitted from amateur radio activities, NTS, ARES and other services, are outstanding.

If you believe that this action was not in the best interest of our hobby, then I encourage you to contact your respective Division Director, listed on Page 8 of QST or Dave Sumner-K1ZZ, ARRL Executive Vice President, 225 Main Street, Newington, CT 06111.

hl> We will be taking a trip to Monterey sometime so I'm looking for
hl> info on open 2m repeaters in that area. We will also be in Solvang so
hl> info for that area would also be appreciated.

I can't help you on the Monterey part, but I can with Solvang.
The problem with it is it's in a valley that isn't served by repeaters
too well. You can't hit any of the machines in Santa Barbara, at least
no one I've talked to can. There is one that would probably work though,
and that's 145.18-, there's a PL of 131.8 I believe. There are several
machines in Solvang and a couple in Lompoc that may be of interest. They
are:

146.895 - (No PL)
147.210 + (No PL)
145.120 - (PL 100.0)
145.420 - (No PL)
147.120 + (No PL)

That's what the repeater directory has. .120 is interesting because it's
part of the WALA link which runs from King City to San Diego and out to
the desert.

Hope this helps...

... RAM DISK is NOT an installation procedure!

>Rick Gilmore
>N3QL0

The early models suffered from lack of modulation. There is a trimmer
potentiometer on the transmit/receive board that can be turned up. I
used the "by ear" method, comparing audio volume with another transceiver.
It works find now, and nobody complains about low audio. Just don't
turn the modulation up too much...

You could try wiping it with a moist paper towel or Q-tips. If the
battery section is removeable or separate from the rest of the
radio, rinse it with water and rub any stubborn spots with Q-tips.
My theory is that you want to remove all those corrosive and hopefully
water-soluble chemicals.

The battery contacts also get corroded, and any plating on them may
be gone. Go over them with fine emery cloth, or a pencil eraser.

Good luck,
Jim

The London Amateur Radio Club wishes to get more information on the '
Advanced Computer Controls new interface to a pc to provide extensive
voice message storage.

We have their bulletins but apparently most of their information is
available online through commerical email services in the US. Is this
information available through FTP/IP or Gopher.

Any information would be of help..

SB SAREX @ AMSAT $STS-59.023
STS-59 Extension Day

Greenbelt, MD, 4/17/94 at 15:40 UTC

The STS-59 mission has been extended by one day. Landing is now set for
15:53 UTC on Tuesday April 19. This extension day provides an additional
day of SAREX operations for those interested in making a SAREX contact.

The official SAREX element set for today is still JSC-021. This element
set was generated by Gil Carman, WA5NOM, of the Johnson Space Flight Center.

760. RB322 RACES in Action

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-17 16:03:11 UTC
From: enge@almaden.ibm.COM
Message-ID: <199404171606.JAA12943@ucsd.edu>
Source record: 268375

Bid: $RACESBUL.322
Subject: RB322 RACES in Action

TO: ALL EMERGENCY MANAGEMENT AGENCIES VIA AMATEUR RADIO
INFO: ALL COMMUNICATIONS VOLUNTEERS IN GOVERNMENT SERVICE
INFO: ALL AMATEURS U.S (@USA: INFORMATION); CAP; MARS
FROM: CA GOVERNORS OFFICE OF EMERGENCY SERVICES
(W6SIG@WA6NWE.CA) Ph: 916-262-1600
2800 Meadowview Rd., Sacramento, CA 95832
Landline BBS Open to All: 916-262-1657
RACESBUL.322 RELEASE DATE: April 18, 1994

Subject: OPS - RACES in action - non emergency events

Here are some of the events utilized in one area to help
citizens become familiar with RACES and to train RACES
participants:
a. Westminister City RACES provided communications at the
Blessed Sacramento Church Festival, with RACES mutual aid
supplied by Orange County, and the cities of Cypress and
Huntington Beach. 25 operators participated in 200 person hours
over 3 days at a festival that drew over 25,000 people.
b. County requested exclusive RACES at the Amateur Radio
booth at the County Fair for two days of first weekend. If not
granted, RACES members will still participate, but the Radio
Officers will not officially schedule member participation.
c. Iranian Festival. We plan to setup communications posts
throughout the public park to provide the Iranians with an easy
means for reporting and finding lost children, as well as other
situtions. Because of the limited number of members who can
participate due to its being Easter Sunday, we will most likely
request mutual aid from City RACES groups.
d. Duck & Cover Drill, April 5. This is a State OES drill,
at 10:30 a.m., probably on 7230 kHz. We will probably want to
activate on 2 meters or 6 meters, as well, to communicate with
City EOC's.
e. Mass Casualty Drill, April 22.
f. Earthquake Expo at Main Place Mall in Santa Ana. We will
work this event in shifts and invite City RACES groups to display
their promotional material as well.
Those are just a few training venues for the RACES. eom

Footnote:
"One purpose of these bulletins is to assist the civil defense or
emergency management agency in the use of communications

volunteers as unpaid staff. Learning how to best use them can be very beneficial. For more information call or write: Stan Harter or Cary Mangum 916-262-1600; OES ACS Program, Telecommunications Division, 2800 Meadowview Rd, Sacramento, Ca 95832."

RACES Bulletins are archived on the Internet at ucsd.edu in hamradio/races or in hamradio/packet/tcpip/incoming and can be retrieved using FTP. The opinions stated are those of the author of the bulletin and not the poster.

I've never cleaned battery acid off electronics before, but from my chemistry background, I would think something like a solution of baking soda (sodium bicarbonate) would help neutralize the acid. But please get a second opinion before trying this.

In article <48@oldhagbug.win.net>, John Dick <jdick@oldhagbug.win.net> wrote:
>I have heard that on ?2 meters? and a "dial-pad" you can connect up
>to a ?repeater? and make local phone calls?

On the 2 meter band, repeaters are quite popular. These are special-purpose radios, mounted in advantageous locations with good antennas, that receive and retransmit weak signals. Mobile and portable 2m ham rigs talking to each other ("simplex") have a typical range of maybe 0.5 to 10 miles, depending on the antennas available. Going through a repeater can increase that range to 30 or 40 miles or more. Linked repeaters can give hundreds of miles of coverage.

Many, but not all, repeaters have "autopatches" which can make phone calls.

>Do you need to belong to any club to use someone elses repeater?

Sometimes. Many repeaters are "open", meaning anyone can use them. It's considered proper to join the club supporting a repeater if you use it often. Repeaters are expensive and hard work to operate.

Autopatches are less often open. (A repeater can be open but have a closed autopatch.) For autopatch access, it's usually necessary to join the club that operates that repeater.

>Can anyone copy your "phone" conversation?

Yes. A popular repeater probably has a couple dozen hams and maybe another couple dozen scanner owners listening to every conversation.

Ham radio rules are set up so that anyone can copy any conversation. Secrets are forbidden.

>Is this an alternative to Cellular?

Maybe. Autopatch phone calls have to be kept short, whereas cellular calls can be as long as you want. Autopatches are less private than cellular. You have to be in range of a repeater on which you have autopatch acces. No business use is permitted, period.

Cellular is plug-and-play; autopatches aren't.

>Does the new no-code (I don't know morse, but I could learn if I had to)
>allow this band and.or this type of communicating?

Yes.

>So, what is the best ham band to use to avoid skip? What is the best
>ham band to talk skip?

Hams have many bands available. There are also many different ways to
"skip" from one place to another, and each band has its own characteristics
for long-distance propagation.

In general, the higher-frequency the band, the less often you will see
long-distance communications happen by accident. 2 meters, 1.25 meters,
and 70 centimeters are popular bands for local communications.

For ionospheric reflection, which is probably what you are seeing on
11m, the choice of the best band changes with the sunspot cycle, the
time of day, and conditions of the sun's surface and earth's upper
atmosphere.

>I hear skip on ham is legal. Is it?

Yes, quite legal, as long as the ham is operating within the
frequencies allowed for his/her license. Some hams really get into
long-distance communications, called "DX". There are even awards for
making lots of DX contacts.

>I would assume 10-meters would be a good skip area because of it closeness
>to CB freqs.

It is a good band for skip during the strong part of the 11-year
sunspot cycle. We're on the declining edge of the cycle right now, so
10 meters is not going to be very good for DX for another 5 years or
so. There are lots of other bands that can be used for DX, however,
and there will always be freak occurences that will open up 10 meters.
My first HF contact, a few weeks ago, was a conversation from Ohio to
California on 10 meters. That is fairly respectable for a new ham using
a "dead" band. :-)

(To give you an idea of what is possible, my second contact ("QSO") was
with a ham in Spain on 20m morse code.)

>Again am I able to use these bands with the no-code?

No. The no-code Technician license can use 6 meters, which has a wide
variety of unpredictable propagation modes, but you need morse code in
order to get onto 10m and below, where world-wide communications is
common and somewhat reliable.

If you spend a couple of weeks with code tapes and learn 5 WPM morse
code, you can get onto 10 meters voice and 80, 40, 15, and 10 meter
morse code. You can do worldwide communications with these bands.

>Do ham radios usually cover many ham bands?

It depends. Commercial rigs for HF (the bands that get ionospheric
skip) tend to cover all HF bands. Rigs for VHF and up often handle
only one band, or sometimes two. It's also possible to buy a rig for
one band and hook up a converter to use it on other bands; hams who are

into VHF, UHF, and microwave do that a lot.

>Will one antenna cover many ham bands?

It depends on the antenna and the bands in question. The answer to this question is "maybe", and that's final. ;-)

You may be able to use your CB antenna for 10 meters, but if you're going for no-code, that won't be very useful.

Hams often build antennas. It's not too hard to put up a good antenna for $10 to $30.

>What is a good starter radio? What would you expect me to pay to enter
>the ham arena?

Your choice of start radio depends on which bands you plan to work.

>Obviously I have a computer and I have heard about ?packet? radio.
>What is this? What band is this done on?

Packet radio is, in essence, building a network using radio links. There is a lot of room for experimentation here! Packet activity occurs on all bands, but most of it is on 2 meters.

There are some good books about ham radio out there. They answer all of these questions and more. Look for them in your local library, bookstores, ham radio stores (most are pretty friendly), or Radio Shack. Watch out for older books in the library. While they get the idea of ham radio across, the license requirements, procedures, and privleges have changed a lot in recent years.

Another good way to get information is to find some area hams. Ask around and some may surface, or just show up at a meeting of a ham radio club! You'll probably find someone friendly who can help you get into ham radio.

765. W2A with display problem

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-17 20:25:16 UTC
From: grady@netcom.com
Message-ID: <gradyCoF7E5.HAK@netcom.com>
Source record: 268381

This is for all of you who can diagnose technical problems:

I have a IC-W2A HT with an intermittent in the display.

Some small fraction of the time (say about 1/16) when I turn
on the HT the LCD disply is very faint and low contrast and
the green backlight does not work at all. All other functions
work perfectly.

When in this low contrast state it sometimes will 'fix' itself
spontaneously after a few minutes. Other times powercylcling will
temporarily fix the problem.

The extended XMIT hardware mod is in place.

I have swapped power packs and used DC power with no difference.
The problem does not seem to be shock sensitive nor does
it seem to matter what the contents of the display are.

My naive guess is that I have a cold solder joint or oxidized
connector in a power lead to the display bias and backlight.

(While the unit is under warranty ICOM service wasn't able to
duplicate the problem.)

Anyone have a flash of insight what it might be and what
I can do to try to fix the problem myself or make it 100%
repeatable?

Cross-posted to: rec.radio.amateur.misc,rec.radio.info

SB DX @ ALLBBS $OPDX.155
Ohio/Penn DX Bulletin No. 155

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 155
BID: $OPDX.15
April 18, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DL7VEE & DXNL, DF4RD, N1FJL, N2US, KG4TM, K5FUV, WB8LFO, KF7E, KF8VW, KF9PL, N9JCL and AH0W/OH2LVG for the following DX information.

4S7, SRI LANKA. The DX NewsLetter (DXNL) reports that two Belgium operators will be active for the next several weeks. Be looking for 4S7/ON4IPA and 4S7/ON4AMI from here. Meanwhile, 4S7WP is usually active on 20 meters CW between 1115 to 1230z.

4U1UN CARDS. On April 18th, approximately 2000 cards will be mailed out from Lorain, Ohio, reports Jerry, WB8LFO. Cards for 4U48UN are now being worked on and when they are finished, they too will also be mailed. Jerry states the goal is to have all the cards (that were sent direct to W8CZN and WB8LFO and not bureau cards) up-to-date by Dayton's HamVention. Now that the cards are past the paper logs and the computer logs are being used, the processing should be a lot faster. Please DO NOT send second requests until an announcement has been made that all cards have been processed. Also, please do not send cards to AA2FN, only to W8CZN. Jerry also reported that some people are misreading the callbook address of W8CZN and are sending cards to Kurt, N8CZN, in Michigan. The correct address is: Jim Tullis, 7226 Huntington Dr., Hudson, Ohio 44236.

6Y, JAMAICA. Sean, KF9PL, will be active from May 25-30th and plans to be a participant in the CQ WW WPX CW Contest as a Single-Op low power entry. He will be using a special prefix for the contest and has applied for the call sign, 6Y0DX. Before the contest he will be active on CW, SSB and RS-12. He wants to try to be on 40/80 meters as much as possible.

9N, NEPAL. The DXNL reports that DL1EMX as become active as 9N1EM and was heard on 14184 kHz at 1607z. There have been no reports of activity on the Ohio/Penn Network as of yet.

CY9, ST.PAUL ISLAND (IOTA NA094/GRID SQUARE GN03AT). Another group has announced that they will be active from this island off the coast of Nova Scotia. St. Paul is known as "the graveyard of the Atlantic", because of the ship wrecks and 3000 deaths these waters have seen. Dates for the operation will be 4-5 full days (WEATHER PERMITING) during June 10-19th. The operating team will consist of four operators: N9JCL/CY9 Scott, K0SN/CY9 Tom, AA9GZ/CY9 Bob and WC9E/CY9 Paul. They will be running two stations around the clock (as long as the propagation is good and the coffee is hot). The team will be active on 10-80 meters (including the WARC bands) operating SSB, CW and RTTY. They request to please give full calls in the pile-ups. QSL via K0SN, Tom Hellem, W6321 Two Mile Rd., Porterfield, WI 54159 (SASE + ONE GREEN STAMP).

KG4, GUANTANAMO BAY. To commemorate the 500 year anniversary of Christopher Columbus arriving in Guantanamo Bay, Cuba, a special events station, KG4CC, will be operating to celebrate this historic occurrence. The station will be operating on the exact spot in which Columbus first set foot in 1494 and will be active for 24 hours starting at 0000z on April 30th. Operations will take place on both CW and SSB modes, using the following frequencies:
CW - 3525-3545, 7025-7045, 14025-14045, 21100-21120 and 28100-28120
SSB - 3850-3870, 7225-7245, 14225-14245, 21300-21320 and 28300-28320

Individuals who make contact with KG4CC, will be eligible to receive a handsome certificate honoring the event. Contacts are also good toward the Worked All Guantanamo (WAG) award, as well as being valid for DXCC credit. Address all QSL and certificate inquires to: Guantanamo Amateur Radio Club, PSC 1005, Box 73, FPO AE 09593-0011. For further information, contact Greg at the following packet address:
KG4CB @ KG4TM.#GTMO.CUB.CARB.NOAM

PJ7/PJ8 DUTCH SINT MAARTEN. Frank, AH0W/OH2LVG, informed OPDX that Chod Harris, VP2ML/WB2CHO, (editor of "The DX Bulletin and The DX Magazine"), and himself will be signing PJ7/WB2CHO and PJ7/OH2LVG, respectively. They will be active from May 24 to 30 and plan to be active in the CQ WPX CW Contest as PJ8X. Chod and Frank are going to build a permanent station for use by future DXpeditioners/Contesters who want to operate from the Simson Bay Lagoon area of Sint Maarten. Details will be in an upcoming issue of "The DX Magazine". QSL PJ7/WB2CHO via K1RH. QSL PJ7/OH2LVG and PJ8X via KE7LZ.

WA3NAN/4, TANGIER ISLAND (IOTA NA-083). Members of the Goddard Amateur Radio Club will operate from this Virginia State island group, April 22-24th. The group will be active on the IOTA frequencies (7160, 14260, 21260 and 28460 kHz) for SSB and 25 kHz from bottom of bands for CW. QSL to CBA of WA3NAN.

FOR YOUR INFORMATION.... As reported last week, there was some concern about the where-abouts of a few hams in Rwanda because of the political unrest in the country. Paul, F6EXV/9X1DX, has been evacuated from Rwanda and is reportedly safe in Burundi. 9X1HG is also reported to be safe and out of the country..... Bill Kennamer, K5FUV, DXCC Manager, reports a check of the latest ITU prefix list shows 7O listed for Yemen. 4W is

no longer listed for Yemen..... It was reported on the INDEXA net that well known QSL Manager, Joanie, KA6V, is in the hospital. Details of the reason why were not not reported. Joanie is one of the QSL Managers for the 3Y0PI DXpedition, as well as the VP8SSI operation. OPDX wishes her a speedy recovery.....

DX REPORT. Ralph, N1FJL, does a weekly DX report on the K1MAN broadcast that is transmitted by "The International Amateur Radio Network". The broadcast can be heard daily on 3975, 14275 and 28475 kHz at 1100, 1200, 1400, 1800, 2200, 0100 and 0300z. This broadcast changes every week and late Sunday afternoon is when the change takes place.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

I am interested in obtaining a no-code ham license. Any information on
where I can go or who I can call to find out where test are given would
be greatly appreciated.
I am located in South Florida... I understand that there are tests given
in Sunrise every other Saturday, or something like that...

I'm not getting this newsgroup through my local server. My system administrator want a copy of some post to the group to try and sort out where the problem lies.

Would some kind person(s) please e-mail this message back to me *with the headers*, so I can get it sorted.

Just so's I don't get millions of copies, would you reply ONLY if your name is Richard or Smith or your birthday is in May. Tha shouldn't fill my mailbox too much!!

Thanks,

Richard Smith

SB SAT @ AMSAT $ANS-106.01
GARC LANDLINE BBS OPENS

HR AMSAT NEWS SERVICE BULLETIN 106.01 FROM AMSAT HQ
SILVER SPRING, MD APRIL 16, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-106.01

Goddard Amateur Radio Club (GARC) Landline BBS Operations Begin

The NASA Goddard Amateur Radio Club (GARC), Inc. in Greenbelt, MD has been working behind the scenes on projects that may benefit all amateur radio operators in general and perhaps AMSAT members in particular.

Ron Parise (WA4SIR) has been "beta" testing a Bulletin Board System (BBS) which is accessible via the INTERNET through telnet and ftp (file transfer protocol), a telephone modem, and packet radio (locally on 145.090 MHz and non-locally through "packet wormholes"). With Ron's heavy STS-67 crew training as of late, Jim Blackwell (N3KWU) is picking up much of the work to complete the "beta" testing phase. The BBS contains keplerian orbital elements updated daily, AMSAT bulletins, SAREX bulletins, club member mail service, club announcements, space shuttle mission infor-mation and lots more.

Access via Internet: wa3nan.gsfc.nasa.gov or 128.183.105.17
via landline: 301-286-4137
via packet: WA3NAN on 145.090 MHz in Washington, DC area

Additionally, the Goddard Amateur Radio Club has a home page for public viewing on the GARC World Wide Web server. It contains the latest GARC Newsletter in electronic form, latest space shuttle keps, GARC calendar of events, details of upcoming club activities, current WA3NAN QSL card, club facility-repeater-BBS info, a morse code experiment and more.

WWW access URL:
http://macgwy-mac2.gsfc.nasa.gov/garc/wa3nan-home-page.html

The GARC Web server was developed and is maintained by club president Jim Blackwell (N3KWU) (n3kwu@amsat.org). All radio amateurs are invited to check out its potential. This medium is the hottest item on the INTERNET today.

[The AMSAT News Service (ANS) would like to thank WD8LAQ for this bulletin item. WD8LAG can be reached at his INTERNET address of wd8laq@amsat.org.]

AMSAT PBBS CHANGES FREQUENCY

HR AMSAT NEWS SERVICE BULLETIN 106.02 FROM AMSAT HQ
SILVER SPRING, MD APRIL 16, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-106.02

AMSAT PBBS Changing Frequency 15-APR-1994

The AMSAT PBBS will be changing frequency and modes starting 15-APR-1994 at 16:00 UTC. The AMSAT PBBS will be on a "Mark" freqeuncy of 14.079 MHz, that is 14.181.1 MHz AFSK LSB using the mode Pactor with the callsign WT0N. The new schedule will be as follows: Monday through Saturday from 16:00 UTC until 23:00 UTC on a "Mark" frequency of 14.079 MHz. From 23:30 UTC until 04:00 UTC on a "Mark" freqeuncy of 7.073.5 MHz, that is 7.075.6 MHz AFSK LSB, using the Mode Pactor. These changes have been made to better serve AMSAT users with improved coverage and the use of a mode that many of the users have expressed an interest in. If anyone would like to use the Mode G-TOR, please let W0TN and he will see about setting up a schedule for G-TOR users. Please send any comments or suggestions to one of the following addresses:
INTERNET: BJARTS@STTHOMAS.EDU
PACKET: WT0N@WB0GDB.#STP.MN.USA.NOAM
PACTOR: WT0N

The AMSAT PBBS will have updated Keps and AMSAT BULLETINS, along with SpaceNews and other satellite related items.

[The AMSAT News Service would like to thank B.J. Arts (WT0N) for this bulletin item.]

SB SAT @ AMSAT $ANS-106.03
AO-13 OPS NET SCHEDULE

HR AMSAT NEWS SERVICE BULLETIN 106.03 FROM AMSAT HQ
SILVER SPRING, MD APRIL 16, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-106.03

Current AMSAT Operations Net Schedule For AO-13

AMSAT Operations Nets are planned for the following times. Mode-B Nets are conducted on AO-13 on a downlink frequency of 145.950 MHz. If, at the start of the OPS Net, the frequency of 145.950 MHz is being used for a QSO, OPS Net enthusiasts are asked to move to the alternate frequency of 145.955 MHz.

Date UTC Mode Phs NCS Alt NCS
18-Apr-94 0100 B 188 W5IU WA5ZIB
23-Apr-94 1800 B 180 VE2LVC W9ODI
30-Apr-94 2130 B 176 W9ODI VE2LVC
09-May-94 0000 B 175 W5IU WA5ZIB

14-May-94 1700 B 167 WA5ZIB W5IU
21-May-94 2130 B 185 VE2LVC W9ODI

Any stations with information on current events would be most welcomed. Also, those interested in discussing technical issues or who have questions about any particular aspect of OSCAR statellite operations, are encouraged to join the OPS Nets. If neither of the Net Control Stations show up, any participant is invited to act as the NCS.

Slow Scanners are invited to join the SSTV sessions on AO-13. The freq-uency is 145.955 MHz. The net meets at 45 minutes before Mode S, and on Mode B following Mode S on Saturdays and Sundays. Join those sessions or convey your wishes for other SSTV skeds to wb6llo@amsat.org, and he will coordinate your efforts.

WEEKLY OSCAR STATUS REPORTS

HR AMSAT NEWS SERVICE BULLETIN 106.04 FROM AMSAT HQ
SILVER SPRING, MD APRIL 16, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-106.04

Weekly OSCAR Status Reports: 16-APR-94

AO-13: Current Transponder Operating Schedule:
M QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Apr 07-Jul 11
Mode-B : MA 0 to MA 170 |
Mode-BS : MA 170 to MA 218 |
Mode-S : MA 218 to MA 220 |<- S beacon only
Mode-S : MA 220 to MA 230 |<- S transponder; B trsp. is OFF
Mode-BS : MA 230 to MA 250 | Blon/Blat 230/-5
Mode-B : MA 250 to MA 256 |
Omnis : MA 250 to MA 120 | Move to attitude 180/0, Jul 11
[G3RUH/DB2OS/VK5AGR]

FO-20: The following is the current schedule for transponder operations:
ANALOG MODE:
20-Apr-94 7:35 -to- 27-Apr-94 7:55 UTC
11-May-94 6:54 -to- 18-May-94 7:20 UTC
Digital mode: Unless otherwise noted above.
[Kazu Sakamoto (JJ1WTK) qga02014@niftyserve.or.jp]

STS-59: To obtain a QSL, either as a result of a SWL or for a QSL, send your report or QSL to ARRL EAD, STS-59 QSL, 225 Main Street, Newington, CT 06111, USA. Include the following information in your QSL or report: STS-59, date, time in UTC, frequency and mode (FM voice or packet). In addit-ion, you must also include an SASE (or sufficient IRCs) using a large, business-sized envelope if you wish to receive a card. The Orange Park Amateur Radio Club in Florida has generously volunteered to manage the cards for this mission. [Bob Inderbitzen (NQ1R) Assistant to the Manager, ARRL Educational Activities]

KO-23: Working well and has a new pair of images. [WH6I]

KO-25: Working well. A number of new images can be found on KO-25 but since the wide angle images are in a new format that so far has not been decoded, and since narrow angle images are very hard to locate in the absence of the companion wide angle image there is very little to get out of the images that are available. [WH6I]

AO-16: Working well. WH6I notes that usage on the 1200 baud OSCARS has has dropped off considerably. [WH6I]

LO-19: Working well. [WH6I]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

770. IPS Daily Report - 17 April 94

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-17 23:12:23 UTC
From: rwc@flare.syd.ips.oz.au
Message-ID: <1994Apr17.231223.5945@ips.oz.au>
Source record: 268386
Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 17/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 17 APRIL AND FORECAST UP TO 20 APRIL

IPS Warning 11 was issued on 15 April and is current
for interval April 17-20 (coronal hole).

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 082/023

1B. SOLAR FORECAST
18 April 19 April 20 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 085/027

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: major storm

Estimated Indices : A K Observed A Index 16 April
Learmonth 41 4566 5333
Fredericksburg 55 17
Planetary 130 29

Observed Kp for 16 April: 3652 3354

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
18 Apr 40 Active to minor storm.
19 Apr 20 Active.
20 Apr 15 Unsettled to active.

2C. MAGNETIC COMMENT
Coronal hole induced activity was stronger than expected. Further
activity expected today, with an easing in conditions expected
on day 2.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
17 Apr normal fair-normal poor
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
18 Apr poor poor poor
19 Apr normal fair poor
20 Apr normal normal fair
3C. GLOBAL HF PROPAGATION COMMENT
Fair-Poor HF comms quality expected for today.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near normal to 30% enhanced.

Observed T index for 17 April: 67

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
18 Apr 40 Near predicted monthly values.
19 Apr 30 Near predicted monthly values.
20 Apr 30 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Strong spread F and sporadic E was observed during local night.
Further degradations are expected today, with conditions improving
on day 2. Depressions of up 30% were observed at Hobart yesterday,
other stations were at near normal to enhanced levels.

>>Excuse me, but USENET does not necessarily imply access to FTP etc.
>
>There are several FTP-mail server available that performs
>the ftp task at request and mail back the result !
>
>Why not use this service to reduce bandwidth ??

Ummmm, Usenet doesn't imply access to e-mail, either. There are people
who work at places where they have Usenet read/post access (even to
moderated groups---the news server itself has e-mail) and yet have no
e-mail access (send or receive). I used to work for a company where
this was the case. I, fortunately, had my own access to e-mail outside
of the office. Others, however, may not be so lucky (or they may not
know how to get it, that they can, etc.).

As long as the article is cross-posted between rec.radio.info and
rec.radio.amateur.misc, and not posted twice (once to each group),
it isn't taking up any extra bandwidth (other than a few bytes for
the extra newsgroup's name in the ``Newsgroups:'' header), disk space,
etc., so it hardly makes any difference.

Later,

>and maybe others that will work. I do not know about other s/w for the
>Mac that will do it. I use HM for MAC and am completely satisfied with it.

In the dos world (and one day, probably far into the future, in the UNIX
world), there is also KAMterm. :-} For Mac users, well, there isn't a
Mac version of KAMterm (I don't have a Mac), but when Stan Horzepa took his
first look at KAMterm before reviewing it in his column in QST (Feb. 92),
he did so under a dos emulator on a Mac. :-)

Feel free to e-mail me for more details. It might help if you include the
word ``KAMterm'' in your Subject line...I'm pretty well backlogged on mail,
but if it's KAMterm mail, it automatically gets top priority.

The 3-Hr Ap Indices for 16 APR 94 are: 15 64 45 8 16 14 37 31
Greater than 2 MeV Electron Fluence for 17 APR is: 1.3E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7701 (N08E42)
was quiet and stable, but is showing some growth with the em-
ergence of some new spots.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field ranged from quiet to severe storm
levels for the past 24 hours. Yesterday's distrubance
intensified to major to severe levels from 0000-1200UT with K's

of 9 reported at some high latitude sites. NOAA/SESC received numerous reports of auroral sightings. Conditions dropped off around 1200Z and became quiet to unsettled near day's end. The greater than 2 MeV electron fluences were at high levels early in the day but dropped down to normal back-ground levels around 0500Z.

STD: Periods of intense auroral activity were sighted throughout a good portion of North America during this disturbance. Significant equatorward expansion of the auroral oval was apparent with the equatorward edge lying in the extreme northern U.S. states for a good portion of the local night. Auroral activity was officially sighted as far south as Toledo Ohio, Otis AFB in Massachusetts, Scottsbluff Nebraska and Hanford Washington (near 40 degrees north latitude). Unofficial reports and observed intensity levels indicate that activity was observed equatorward of these official sites. We received over 240 individual reports of auroral activity sightings over the last 24 hours.

Geophysical activity forecast: the geomagnetic field is expected to be at minor to major storm levels for the next 12 to 24 hours: the more disturbed periods are likely to occur during local nighttimes and less disturbed during daytime hours. Conditions are likely to remain at active levels through the second and third days as a coronal hole will be in favorable position at that time.

Event probabilities 18 apr-20 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 18 apr-20 apr

A. Middle Latitudes
Active 20/40/40
Minor Storm 35/20/20
Major-Severe Storm 25/10/10

B. High Latitudes
Active 20/35/35
Minor Storm 30/20/20
Major-Severe Storm 35/15/15

HF propagation conditions were strongly disturbed over the last 24 hours. Intense geomagnetic and auroral storming completely knocked-out transpolar and transauroral circuits during the first 18 hours of the UTC day. Middle latitudes also observed heavy signal degradation with poor to occassionally near-useless propagation. Conditions began

improving after approximately 18:00 UTC with the stabilization
of geophysical activity. Another favorably positioned coronal
hole should continue to keep propagation conditions
below-normal over most regions during the next several days.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ --------------------------
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max, and end times are defined as: B = Before, U = Uncertain, A = After. All times associated with x-ray flares (ex. flares which produce associated x-ray bursts) refer to the begin, max, and end times of the x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Source record: 268393

SNIP SNIP

: Then, when I finally wanted to trade up to something smaller, I first played
: with the W2A, but found the user-interface a bit confusing (having some bias
: with Yaesu). I also didn't see anywhere in the manual the ability of the
: W2A to perform automatic repeater offsets.

: I ended up picking up an FT-530, and really enjoy it. The display backlighting
: is absolutely wonderful, the user-interface is easy to use, and the radio
: is nice and small. I personally really enjoy dual in-band receive
: (vhf+vhf or uhf+uhf simultaneously), along with auto repeater offset.

SNIP SNIP

Anyway, as a W2A owner, I want to throw my two bits in. It was
my first radio, so I've grown used to the quirks some have with its user
interface. However, it does have the repeater offsets, and you can put
in odd offsets too.

I've had mine since they were introduced, and I've put it
through literal hell. A car wreck, and a motorcycle wreck (called for
help both times on it), numerous encounters with gravity....etc. It
keeps going. The only big thing I wish it had is a lighted keypad.

I have a buddy that bought a 530 a while back (he'll probably see
this post). I've played with it, and I'm not sure what radio I like
better. I like the lighted keypad on the 530, but I like the display on
the W2A more. The 530 has a host of bells and whistles, no question
about it. I debated (and still am) selling my W2A to by a 530, but I'm
not sure.

It's almost like that old pair of tennis shoes in your closet.
You get used to them, and just can't part with them. Hehehe. Oh well,
I've got a lighted keypad on my Yaesu 5200 in the car anyway. :)

Jeffrey Herman (jherman@uhunix3.uhcc.Hawaii.Edu) wrote:

> Now, someone please tell me the advantage of grid squares over just
> using one's latitude and longitude.

First of all it is a standard way of telling where you are. If you use longitude and latitude, someone will give the longitude first others the latitude. Someone might forget to give the N/S/E/W and someone will give them in fractional degrees or degrees and minutes.

When you are working with weak signals, it helps a lot that the coordinates are given in a standard format. The locator consisting of 4 (or 6) characters, the first two beeing letters, the next two digits (and the last two letters).

In Europe, the old 5 character QRA-locator system has been used for decades on VHF and higher. You could pinpoint a station within a few kilometers. There was a problem in that system since the same locator code reappeared every 2500 km. This was not a major problem in normal terrestrial contacts, but with more EME and satellite activity, this became a major problem.

The new world-wide locator system or Maidenhead system was created replacing the old QRA-system. This new 6 character system uniquely defines every locator on the Earth and you can pinpoint a station within a few kilometers.

To get to the same resolution using longitude and latitude you would hawe to use degrees and minutes. It is much easier to say that my locator is KP11VL than to say it is 61 degrees 29 minutes north and 23 degrees 45 minutes east. Even if a notation like 61N29/23E45 would be used on CW, KP11VL is much shorter.

If there is fast QSB, it helps a lot if you have a short code which can repeated frequently.

The locator is also very usefull, if you manage to copy the locator of an other station in the antenna side lobe, then you know where (and which way) to turn your antenna to establish a two-way contact.

Most beacons send the locator in addition to their call sign and you can pinpoint the beacon without an up to date beacon list.

You need this kind of resolution for distance calculations and antenna aiming purposes (particulary on short distances).
On microwaves where the antenna beamwidth might be a degree or two, you have to know the direction to the other station very accurately

and thus you have to know the location even more accurately.
Mainly for microwave work, the sub-square can be divided into
100 micro squares and two digits can be appended to the 6 character
locator and you can pinpoint a station within a few hundred meters.
This 8 character micro-locator was defined in the IARU Region I
meeting last year, but I haven't heard anyone using it on the air.

> With lat. and long. given I can
> immediately get a mental picture as to someone's QTH and even their
> climate, based mainly on lat. although land mass must be considered,
> too.

In this part of the world you get more information from the prefix :-)

> For example, if I told you that I'm at 22N 158W you would
> immediately know that I am within the northern tropics in the Central
> Pacific, and my climate is dictated by the NE trade wind belt, AND
> you'd also immediately know my time zone.

When I hear 22N the first assosiation is Sahara or Arabia and the hot
climate there and when I hear 158W the first assosiation is the Pacific.
A bit contradicting assosiations, so I think I have to consult the map :-).

The time zones are defined at 15 degree intervals, so you have to do
some calculations anyway (but in your case it is pretty obvious).
The locator system is based on 20 degree intervals, so you get a rough
picture from it too (a few time zones east and west from your QTH).

> Do grid squares provide the same quick mental information without
> having to `decode' them by referring to a map of grids?

The first thing you learn is that the station is to the east or to the
west of your QTH. This is very important if you only can rotate your
antenna 360 degrees and you have a dead zone facing north. You
soon learn in which directions some near-by squares are from your
QTH without refering to a map.

What are the advatages of the RS 404 then the 202? Please reply

The HTX-202 covers the amateur 2 meter band, the HTX-404 covers the
amateur 70 cm band. Outside of that, they are essentially the same radio.

For some reason, my outgoing email isn't working...

I'm no chemist, but I think baking soda (maybe mixed with a little water)
should do the trick. I know it works with car batteries (lead acid), but I've
never tried it with alkalines.

Unpredictable is correct. Most propagation conditions on UHF and
VHF are caused by weather conditions (approaching warm fronts,
being under a high pressure area etc.)

Greenbelt, MD, 4/17/94 at 15:40 UTC

The STS-59 mission has been extended by one day. Landing is now set for
15:53 UTC on Tuesday April 19. This extension day provides an additional
day of SAREX operations for those interested in making a SAREX contact.

The official SAREX element set for today is still JSC-021. This element
set was generated by Gil Carman, WA5NOM, of the Johnson Space Flight Center.

I have another multmode controller question. I've heard an unconfirmed rumor that the AEA PK232 is easily upgradable to 9600 baud packet, while the KamPlus cannot and will not support 9600 baud. Is this true?

tnx es 73 de Steve KB2PWM

785. HELP: Building circuit (11/93 QST) field effect trans (fet) question?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-18 14:49:19 UTC
From: cropley@cbnewsf.cb.att.com
Message-ID: <CoGMI7.5rE@cbfsb.cb.att.com>
Source record: 268399

Need some electronics help. I'm building a project from the Nov. issue (1993) of QST. (the circuit for your car which help protect your radio) (page 72 I believe).

I undertand transitors (base,collector,emiter) however this circuit requires a field-effect-transitor (fet) they use Source, Gate and Drain for each lead. I wanted to verify my guess.

source goes to ground. gate is the input side, drain is the output.

looks like a neat little circuit. I also added a replaceable fuse to the circuit board.

thanks,

andy cropley

I plan to discontinue this email callbook server at the end of April.
The data I'm using is very old, and I don't have the resources to keep
it updated.

There are other callbook servers available, including ones available
via email. I can't remember the addresses offhand, but I would
appreciate it if someone would post their addresses to this list so I
can include them in the responses from my server.

QST:

"Nose" was my first Hawaii contact. His voice was weak but he hung in there.

I told him that I had wanted a QSO with him for quite a while since his call was the same as my dad's.

My dad got his license in 1917. His call was 9IJ. (no other prefix in those days.)

When Nose sent me his QSL card, he included a very nice note with it commending me and my dad. What a nice guy. I remember all those great articles in QST.

I worked him one other time about a year ago from the club station here, W9NAA. His QSL is displayed prominently on the shack wall.

QRX, good friend.

793. April - Amateur Radio Month ??

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-18 15:23:24 UTC
From: dwjhay@muug.mb.ca
Message-ID: <1994Apr18.152324.18982@muug.mb.ca>
Source record: 268411

I heard last week on the local broadcasting station that this month is
Amateur Radio Month.

When I enquired about this at our local club meeting, no one has ever
heard of this before. So a quick call to the local broadcaster confirmed
that according to a service which track this sort of thing it is indeed
Amateur Radio Month. And that this is promoted by ARRL.

Does anyone else know about this.
If we had known earlier we would have put on an event to help promote this!!

Include a self-addressed stamped envelope (SASE) with your QSL. Non-US
stations should include a self addressed envelope with $0.50 of US postage

affixed or appropriate IRCs. Include the callsign worked, date, UTC, mode, and frequency. For packet contacts, include the QSO number issued by the Robot. SWL QSLs: Include the callsign heard, date, UTC, mode, and frequency.

* SOLAR ECLIPSE INFORMATION *
==========

On 1994 May 10 (Tue), an annular solar eclipse will be visible throughout North and Central America. The May issue of "Sky & Telescope" (p 72ff) details this event, the last of its type visible in the continental US until 2012 May 20.

Scott, KF9QK, plans to monitor 10-meter beacons for the effect of the eclipse on radio propagation. Of interest is a predicted 'bow shock' effect on ionospheric propagation as the annular eclipse proceeds, so amateurs should plan observations well ahead and after their astronomical eyeball brethren. Observations of any effect on V/UHF propagation are also of interest. A log of conditions before, during and after the event would be most helpful. "Sky & Telescope" provides the needed planning information. Radio observers, of course, need not worry about atmospheric conditions.

Weather-wise, observers can also expect noticeable shifts in temperature, pressure and wind during the annular eclipse. An observer in Indiana has requested such information, which, if forwarded to KF9QK, will be relayed. Again, the better the log, the more it's worth.

Scott may be reached via packet radio at: KF9QK @ N9HSI.IL.USA.NOAM

[Info via KF9QK]

* AMSAT PBBS MOVE *
==========

The AMSAT PBBS changed frequency and modes on April 15th at 1600 UTC. The AMSAT PBBS will be on a Mark frequency of 14.079 MHz, (that's 14.1811 MHz AFSK LSB), using Pactor with the callsign WT0N. The new schedule will be as follows: Monday through Saturday from 1600 UTC until 2300 UTC on a Mark freqeuncy of 14.079 MHz. From 2330 UTC until 0400 UTC on a Mark freqeuncy of 7.0735 MHz (that's 7.0756 MHz AFSK LSB), using Pactor. These changes have been made to better serve AMSAT users with greater coverage and use of a mode that many of the users have expressed an interest in. If anyone would like to use the Mode G-TOR, please let WT0N know and he will see about setting up a schedule for G-TOR users. Please send any comments or suggestions to one of the following:

INTERNET: BJARTS@STTHOMAS.EDU
PACKET: WT0N@WB0GDB.#STP.MN.USA.NOAM
PACTOR: WT0N

The AMSAT PBBS will have updated Keps and AMSAT bulletins, along with SpaceNews and other satellite related items.

[Info via BJ Arts, WT0N]

* JOHNSON SPACE CENTER BBS INFORMATION *
==========

The Johnson Space Center Amateur Radio Club has set up a telephone computer bulletin board (BBS). The purpose of the BBS is to provide a source of current Space Shuttle mission Keplerian Elements.

There are limited number of BBS files available for downloading. Among the current files are:

o Current and old element sets for the mission in progress
o Current mission information
o Shuttle Amateur Radio Experiment (SAREX) information
o Recent Space Shuttle Mission Schedules and Manifests
o Astronaut/Cosmonaut Ham List
o Current JSC Amateur Radio Club Newsletter

We ask that no files be uploaded to the BBS.

The telephone number is (713) 244-5625. The speed is anything up to 9600 baud. The parameters are N-8-1.

The BBS is currently running in ProComm HOST mode, so the log on is very simple and downloading is easy.

After logging in you will see the Welcome Screen describing the BBS. Also, the Welcome Screen contains the current and latest element set number (e.g., JSC008) loaded on the BBS. Check it against your last set so you won't waste your time duplicating a set you already have.

Press ENTER to bring up the second page containing the current Space Shuttle Keplerian Element Set. If you have a file capture or screen capture function in your communications software, use it for this page. That way, you won't have to go through the file download process if all you wanted was the latest element set.

If you have any comments for the Club or BBS sysop, leave a message and the sysops will respond.

Dale Martin, KG5U @ KA5KTH.#SETX.TX.USA.NA
Secretary, Johnson Space Center ARC
Houston, Texas

* AMATEUR SPACE SHOT *
==========

With funding from the National Space Society, the Pacific Rocket Society (PRS) is building a nitric acid/furfuryl alcohol rocket designed to achieve an altitude of 80 kilometers--the edge of space.

Of interest to the AMSAT folks is the television and data telemetry payload designed and built by Duncan Cumming, KD6GKE. (Duncan is a native of Birmingham England and holds a PhD in Electrical Engineering from Cambridge University.) The system transmits video from a small security camera at 434 MHz and data at 145.75 MHz.

The data channels include GPS, magnetometer, accelerometer, altimeter, launch detector, engine temperatures and pressures and status switches.

The heart of the system is a Tattletale IV single board 6303 based computer.

An article on Duncan's telemetry system, co-authored by George Morgan, WB6ZUV, appears in the April 1994 issue of "High Power Rocketry."

The launch will be from the Pacific Rocket Society test site in the Mojave Desert later this year.

The PRS meets monthly in the physics classroom of Chaminade College Preparatory, West Hills, California. Inquiries about the project can be sent to PRS president Charles Pooley, KD6HKU at ckp@netcom.com or to Dave Reeves at kf6pj@amsat.org or chaminade@amsat.org.

[Info via Dave Reeves, KF6PJ/WA6BYE]

* FO-20 SCHEDULE *
==========
The FO-20 command station announced that FO-20 will be placed in Mode JA (Analog transponder mode) during Field Day 1994 (25-Jun-94 18:00 UTC through 26-Jun-94 18:00 UTC).

The current operating schedule is as follows:

Analog mode:
20-Apr-94 07:35 -to- 27-Apr-94 07:55 UTC
11-May-94 06:54 -to- 18-May-94 07:20 UTC

Digital mode:
Unless otherwise noted above.

[Info via Kazu Sakamoto, JJ1WTK]

* THANKS! *
==========
Thanks to all those who sent messages of appreciation to SpaceNews, especially:

N9QKD WT0N

and Bob, N7PTM, who uploads SpaceNews to the GEnie telephone BBS system. Bob places SpaceNews in the Radio and Electronics section, and is told it is available in the Space section as well.

796. Re: Working AO-21 with TH-78A

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-18 16:10:04 UTC
From: ve8ev@gov.nt.ca
Message-ID: <1994Apr18.161004.11665@gov.nt.ca>
Source record: 268409

In a previous article, greg@core.rose.hp.com (Greg Dolkas) says:

>Can you really work AO-21 from a handheld? I've tried using my Yaesu 767GX
>(10 watts) into an 8 element Quagi, with not even a hint of a change in the
>downlink static.
>
>Am I doing something wrong? I had the uplink tuned to 435.016, and even tried
>to move it around a little (+/- 5khz or so). Judging from the conversations
>I hear on the bird, most folks seem to have complete OCSAR setups with BIG
>antennae and lots of power (100w range).
>
>Greg KD6KGW
>
>p.s. I've also not had any luck with FO-20, but I've made dozens of contacts
>on RS-10.

I tried for a month to work Oscar 21 with my FT767GX and 10 watts. Even with
a quagi or medium size helix and no one else on the bird at all it just
doesn't have enough kick to get through. I picked up a 70cm amp kit
from Communications Concepts. Less than $200, you just add connectors and
a heat sink and away you go. It is rated for 18W in 100W out at 28VDC but
I drive it with the 10 watts from the 767 and use the 767's internal 24VDC
power and get about 60 watts output. Even into a ground plane or discone
antenna that works OK for AO-21. You just have to wait until the BIG GUNS
take a breath and slip your call in. If you add a high gain antenna
(I'm using a 10 turn helix) you can work AO-21 anytime its above the
horizon.
If you're in a hurry to make some FM satellite contacts, try AO-27
(145.85up/436.800down +/- 13kHz doppler). Ten watts to a ground plane
is plenty for this one, although it is only scheduled on weekends and
then only when the solar panels are illuminated by the sun.

NOTE TO ALL AO-27 USERS

If you don't hear your own downlink right away, tune between 436.875 and
436.915 and *LISTEN* for activity. Also, you might require a filter on
your receiver to cancel to 3rd harmonic from the 2m uplink.
Many an AO-27 pass is unusable because of strong stations that cannot
hear the satellite crooning "Heeelllooo" for the duration of the pass.

800. 2-meter frequencies needed!

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-18 17:16:46 UTC
From: hbechtel@raven.csrv.uidaho.edu
Message-ID: <2ouf9u$5tg@owl.csrv.uidaho.edu>
Source record: 268414

Repeater Frequencies Needed:

I have recently purchased one of those Radio Shack specials, the 2
meter one.

I will be going on a trip this summer from Moscow Idaho to Albuquerque NM
and would like frequencies that I can listen to along the way (since I don't
have a license yet!). I am planning to purchase the $6.00 frequency guide
from ARRL in the near future, but what I need are frequencies for the nearby
area of the following towns in the 2 meter range (144 to 148).

Towns:

Boise, Twin Falls, Salt Lake City, Cortez Colorado, Albuquerque NM.

If there are other towns on the map in between those areas that have repeater
frequencies, please include those also!
Thanks!

JD> didn't support the users of their first system. If I were you I'd stay
JD> away from the RS products and buy your handheld from a reputible ham
JD> radio manufacturer.

On the contrary, Radio Shack is a 'reputible ham radio manufacturer.'
Many of my friends on the air, as well as myself, have the 2M rig, and
have had no or minimal problems with it. None of us have had problems
concerning low audio. The radio contains features that others costing
hundreds of dollars more have. For the price right now, I wouldn't
hesitate to purchase the rig. Even if RS gets out of the Ham business,
which is highly unlikely due to their success with the 202, there are
so many Hams out there that have the rig, that support isn't really an
issue.

... If at first you don't succeed, destroy all evidence that you tried.

Well, while we're at it, BSB stands for Broadcast Services for the Blind.
And since subcarrier services are not directly accessible to the public,
eavesdropping on them is a violation of the ECPA. Get the proper
(registered) receiver.

> edward@cs.ualberta.ca

Cellular phones do NOT operate in the amateur band 905-925 MHz (looks funny

now that the FCC has decided to allocate the top and bottom 3 MHZ ends to LEO
Satellite-based vehicle location systems). They utilize 832 channels which run from 825-850 MHz transmit and 870-895 MHz receive.

If you want to DF something, experiment with finding a cordless phone that is off-hook or try to accurately locate the nearby cellular transmitter towers. They are easy to spot to verify your observations.

You will be very disappointed in the performance at 1280 MHz. Unfortunately

the walls of the cave are not smooth and and not conductive, two very critical ingredients in the waveguide propagation formulas. In research conducted about 15 years go, it was predicted mathematically and then found

by extensive testing that the conductivity of the wall material was very important in propagating the waves down a corridor. Although limestone mines
had tunnels 20 ft square or more, the propagation was better in coal mines with shafts 5ft square. This was due to the coal being far more conductive than limestone. Surface roughness also greatly degraded the propagation, due

primarily to reflection scattering from the rough surface.

Don't forget that the UHF radio tends not to talk around corners or down crosscuts, just in very straight lines. It took some very large billboard reflectors to push signals down the crosscuts for even a few hundred feet. Basic safety recommendation: do NOT rely on radio as your primary safety device. Practice the buddy system and all other rules of spelunking safety so you can enjoy amateur radio the day after a good hike.

Many years ago Myself and members of the SISG Southern Indiana
Speleo Group (non NSS) took the first magentic cave mapper underground
under the direst of emergency siduations. Two men drowned in Showfarm cave
in Indiana and we were in the rescue team. We both communicated to the
surface, CW, and maped the underground passage with a 2Kc magnetic field.
This unit would work thru at least 400 feet of solid limestone.
Later Richard Blendz and members of the Bloomington Ind. Grotto NSS
Frank Reed, Dwight Hazen and others develouped an Uppersideband 30Khz
transceiver system to talk and map to the surface. As K9CUN said there were
articles in the NSS news about this. Early 1970,s
Don't count on reflections in caves to propogate RF. Cave walls are
GREAT absorbers of rf. If we were going to be in a cave for days we would
run a fine (near invisable) wire from outside in the trees back thru the
cave to base camp. We could talk anywhere in the cave within site of the
wire and for a limited distance outside.
We did run tests on 80Meters between two caves once CW and heard
signals thru @ 1/2 mile of rock.

73's Good hamming, Keep your head above water when underground!
Dave K9ZCE

813. US License Examination Opportunities Scheduled 4/18/94 to 7/18/94

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-18 19:58:41 UTC
From: bjahnke@arrl.org
Message-ID: <2872@bjj>
Source record: 268228
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75.

Missing: Decent HF Propagation. Last seen about 2 weeks ago, floating
through the ether at around 14.020 MHz. However, it has been slowly
going away for about 4 years, since I last worked India with my dipole.

If anyone should find my missing propagation, PLEASE send it to:

ham@wam.umd.edu or just send it in the direction of Burtonsville, MD.

I miss it very much, and would really like it back.

Thanks, and 73

817. does a speech -> cw system exist?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-18 21:02:25 UTC
From: arm@helix.nih.gov
Message-ID: <1994Apr18.210225.6454@alw.nih.gov>
Source record: 268232

A ham radio operator friend is loosing manual dexterity due to
a debilitating disease. He enjoys using the morse code, but
will soon be unable to send. I want to adapt his PC so he can
send by speaking into a microphone (using voice recognition).

Questions:
1) does an inexpensive system already exist aimed specifically
at this task?
2) what recommendations do (experienced) people have regarding
inexpensive, but useful voice recognition develpment software
and hardware for the PC? My PC has a 16 bit Soundblaster,
so I would like to develop on that platform.

Thanks.

Source record: 268235

>I seem to have a serious problem. My girlfriend mistakenly unplugged
>my Pro 43 with normal energizer batteries and placed the plug in the
>charge jack. To cut to the chase, my baterries leaked a bit.

What you use to neutralize the cell leakage is relative to the cell used in the radio.

In your case where Energizer cells were used, neutralize with kitchen ammonia. Use a cotton swab and bathe the affected area. If necessary to remove crusted material, gently scratch with an Exacto knife blade. Continue to bathe the affected area with solution until there is no evidence of foaming/reaction.

Then, the most important step is to wash out the ammonia and acid with water. Again, use a swab and flush the area many times and dry completely to remove all traces of water.

Because the cell leakage and cleaning process removes all surface protection, restore moisture as best possible. Clear fingernail polish should be used on all non-contact surfaces. A light film of oil may be placed on contact surfaces.

If the leakage had been from an alkaline cell, such as a nicad, use vinegar and follow the same process as indicated above.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 18/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 18 APRIL AND FORECAST UP TO 21 APRIL

IPS Warning 11 was issued on 15 April and is current
for interval April 17-20.

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 084/026

1B. SOLAR FORECAST
19 April 20 April 21 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 085/027

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 17 April
Learmonth 16 3333 3343
Fredericksburg 20 60
Planetary 25 130

Observed Kp for 17 April: 7898 5334

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
19 Apr 20 Active.
20 Apr 15 Unsettled to active.
21 Apr 12 Unsettled to active.

2C. MAGNETIC COMMENT
Geomagnetic activity should steadily decline over the next few days.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
18 Apr normal fair-normal poor
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
19 Apr normal fair poor
20 Apr normal normal fair
21 Apr normal normal fair
3C. GLOBAL HF PROPAGATION COMMENT
HF comms quality should steadily improve over next two days.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were about 15% below predicted monthly values

Observed T index for 18 April: 20

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
19 Apr 35 Near predicted monthly values.
20 Apr 40 Near predicted monthly values.
21 Apr 40 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Strong spread F was observed during local night. Propagation
conditions should be better today and improving again by tommorrow.

>: of caves.
>

It depends on what you're trying to do. Both 440 and 1200 MHz work pretty well along large boreholes. Many cavers use 49, 146, 440 and 1200 MHz for liason between the top and bottom of large (or noisy) pits. If you want to penetrate rock for communication purposes, the usual method used isn't actually radio but magnetic induction coupling at frequencies between 1KHz and about 200 KHz. The lower frequencies are useful for location since the dipole fields generated by the loop 'antennas' are undistorted by the effects of the conductive medium. At higher frequencies quadrature fields begin to appear which is actually an advantage for communications since 'antenna' orientation is less critical. The higer frequencies are preferable for voice since the coupling and bandwidth are increased. If you would like to discuss it further, email me.

825. Re: Proposed Illinois law to pre-empt antenna restrictions

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-19 01:04:19 UTC
From: little@iamu.chi.dec.com
Message-ID: <1994Apr19.010419.25257@nntpd2.cxo.dec.com>
Source record: 268241

Yes Clark, a favorable ruling at the US Supreme Court would be nice, but also a bit chancey. Persuading elected legislators as opposed to appointed judges would seem to be a lot easier. By getting organized and pushing for our rights, I believe we stand a better chance of getting what we want.

If nothing else, having Illinois legislators aware of the problem and receiving numerous calls of support at a time when Illinois is flooding again has got to be good for our cause.

What harm does it do to have state laws that mimic federal regulations? Stomping some state for making a law opposed to federal regulations would prove very little as the case law there appears to be pretty clear

Let's get our rights written in law instead of court case decisions. Besides, writing or calling one's legislator is a lot cheaper (and quieter) than slugging it out in court.

Sigh, turned on the radio, went on 20, heard lot's of hiss, few signals. Went
on 40, heard lot's of hiss, few signals. Turned off radio and cleaned shack.
This has been my routine for 2 weeks. If anyone finds that HF propagation
please send it to 20 and 40 meters as they are in desperate need of it.
I'm tired of cleaning my shack! 8-)

828. License required

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-19 02:17:54 UTC
From: dave@inca.gate.net
Message-ID: <2ovf0i$9b5@inca.gate.net>
Source record: 268244

Hi all... I have been interested in amateur radio for a couple of years
and am ready to go and take the exam..

I have reviewed question pools (as well as read manuals) regarding the
Novice No-Code license as well as the technician plus class license.

I am interested in transmitting on 2m. What license is required to
transmit on 2m. I have played around with Radio Shack's 2m and really
like it. It works pretty good for a Radio Shack product ;) .....

I just need to know what license I need to be able to transmit on 2m.

Also, if anyone knows where I can FTP either a text file of questions, or
a program that will give me questions regarding novice and/or techicial
license. The program I currently have is out of date.

Thanks...

-Dave

Hi, amateur buffs,

My American callsign expires 6/22/94. I have already mailed to FCC requesting a copy of FORM-310. So far, no answer from them. Even though there is a grace period, I would like to do the paper work right now.

If you have a spare FORM-310, may I have it? I have my mailing address in U.S. However, getting the form in Japan is much more convenient for me.

Waiting for your e-mail.

> Your software is broken, get it fixed.

I'll echo that in case you haven't figured it out yet. You're software is broken. If you are running a PC under MS-DOS (as I'll assume since you are NOT running Unix and CNEWS) install SNEWS. It is a threaded newsreader for IBM systems running MS-DOS. It is compatible with UUCP. It is available via ftp from a number of sources. If you do not have ftp access, send me e-mail and I'll provide you with the details on how to get it from me on a diskette.

This is not at all a condescending attitude. It is simply the truth. Your software is broken. I'm offering to fix it for you.

As a single user running an IBM clone, the package pair of SNEWS and UUPC make an excellent team for both mail and news. About the only limitations I've seen with SNEWS is crosposting to more than 2-3 groups and trying to read a bit of news that was about 180K in size (and binary) that some fool posted.

Well, at night you might be able to go outside and watch the aurora instead. I've heard it was quite spectacular in Wisconsin a few nights ago (course we never see it here in Texas, sigh...)

The 3-Hr Ap Indices for 17 APR 94 are: 110 260 306 206 39 17 16 21
Greater than 2 MeV Electron Fluence for 18 APR is: 6.8E+07

SYNOPSIS OF ACTIVITY

Solar activity was low. A long duration C1 flare began at
1347Z (end at 1514Z): there was apparently no corresponding
optical signature. A 13 degree filament near S11W12 disappeared
sometime between 17/2121Z and 18/1112Z.

Solar activity forecast: solar activity is expected to be
very low to low.

The geomagnetic field was unsettled to active with some
brief minor storm periods at high latitudes. This activity may

be the result of lingering effects from yesterday's major storm
or it could be effects from a favorably positioned coronal
hole.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly active for the next one to two days
due to coronal hole effects. Conditions should subside to
predominantly unsettled sometime on the third day.

Event probabilities 19 apr-21 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 19 apr-21 apr

A. Middle Latitudes
Active 35/35/35
Minor Storm 15/15/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 35/35/30
Minor Storm 20/20/20
Major-Severe Storm 10/10/10

HF propagation conditions recovered fairly rapidly during
the day today. Near-normal propagation conditions returned to
the low and middle latitude paths, while high and polar
latitude regions struggled with below-normal, but steadily
improving conditions. All regions should see near-normal
propagation by 21 April.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,

EPL = Eruptive Prominence on the Limb.

```
Ver 4.11i of PED CW Pileup Trainer for IBM-PC has been released by
JE3MAS MasIII Hiroyuki Kozu <KHD00751@niftyserve.or.jp>. Detailed
release information appears at the end of the article.

The latest versions of PED are available by anonymous ftp from

qed.laser.ee.es.osaka-u.ac.jp: /pub/radio/ped

directory as

61200 Apr 19 15:00 ped411i.zip for IBM-PC in ZIP
60124 Apr 19 16:01 ped411i.lzh for IBM-PC in LZH
60618 Apr 18 21:53 ped98410.lzh for NEC PC9801

The file "ped411i.zip" has been also uploaded to the SimTel Software
Repository and will be announced to comp.archives.msdos.announce and
rec.radio.amateur.misc when it becomes available.

Enjoy CW contests and DX-peditions in virtual world!
and don't forget to call us in the real World Wide contests:-)

837. Digest of Articles - QST Aug 93 (Long - 35k)

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-19 11:18:15 UTC
From: wvanhorn@magnus.acs.ohio-state.edu
Message-ID: <29583.wvanhorn@magnus.acs.ohio-state.edu>
Source record: 268251
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

DIGEST OF ARTICLES -- QST, August, 1993

Following are digests of articles printed in the August, 1993 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. Subsequent issues will be posted one per week until they "catch up" to the current date in mid-1994, thereafter monthly.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

Title>TA1:The Effect of Continuous, Conductive Guy Wires on Antenna Performance
Author>Gordon, Lew - K4VX
Source>QST Aug 93, pp. 22-24
Abstract>A report on a computer study of the author's beam antenna which is mounted on a 109-foot (33 m.) tower guyed with continuous metal guys. Contrary to ham "conventional wisdom", the presence of the guys has a negligible effect on the antenna performance.

Digest>"Conventional wisdom" in ham circles dictates that metal guy wires in antenna installations must be broken up with insulators into nonresonant segments. The author addresses the question of what happens if he does not do so. Using a computer with NEC antenna software, he modeled his own tower and complex of antennas and analyzed the difference between using continuous guy wires, not broken up, versus the more conventional insulated segments.

His tower is 109 feet (33 m.) high constructed of Trylon AB-105 sections, guyed at 53 feet (16 m.) and 103 feet (31 m.) above ground. The three guys are anchored 70 feet (21 m.) from the base. The antennas it supports are two stacked 5-element yagis at 54 feet (16.5 m.) and 109 feet (33 m.) heights.

The article illustrates both azimuth and elevation plots of signal strength over the full range of angles. The results show that the difference between the two types of guy wires causes no discernable effect on the major, front lobe of radiation. There are some barely noticeable effects on minor lobes, especially on the back side.

Next he modeled the most extreme case, that of no guy wires at all. Again he found no significant change in the major lobe and only insignificant ones in the minor and rear lobes.

Then he modeled a half-wave 75-meter sloper dipole anchored at near the top of the tower and descending at a 60 degree angle to a point near the ground. The wire antenna is located half-way between two of the guys. In this special case, he found that the guys actually increase the sloper's gain in the desired direction by more than 2 db.

Finally, he modeled guy wires attached to the tower directly below the boom of the top beam antenna. He found that this does interfere significantly with the performance because the yagi's feed point impedance is changed considerably. By testing several cases, he concluded that guy wires in the immediate proximity of the antenna boom affect yagis having low feedpoint impedances, in the order of 10 to 15 ohms, much more than those with 20 to 35 ohm impedances. Overall, he concluded that guys should not be attached closer than 3 to 5 feet (1 to 1.5 m.) from the boom.

His final conclusions are that, at least for antenna installations similar to his own, the presence of continuously conductive guy wires has a negligible effect on antenna performance.

Title>TA2:A Dual-Range AC Voltage, Current and Frequency Monitor
Author>Oscarson, Ed - WA1TWX
Source>QST Aug 93, pp. 25-30
Abstract>A construction article describing an instrument that monitors voltage, current, frequency, and amount of A.C. power. In addition, annunciator alarms are provided to signal variations outside of preset limits.

Digest>The author describes a microprocessor-controlled monitor that measures and displays the output voltage, load current, and frequency from a.c. power sources. Its primary use is in adjusting and operating engine-driven generators to provide a.c. power within the allowable voltage range. It can also be used to measure household appliance power consumption.

In addition to the measurements, the monitor has five alarm outputs. Two of these warn of under\over-voltage, two of under\over-current, and one is for frequency deviation from standard. The alarm outputs are capable of driving TTL level power FETs or transistors, hence can be used to actuate an alarm or disconnect the power from the load.

Frequency alarm limits are set to 55-65 Hz. for 60 Hz. standard and a jumper allows selection of an alternate 45-55 Hz. for 50 Hz. standard systems. The voltage limits are set 95-130 volts and one can be reset to 200-250 volts for 220 volt systems.

The article includes complete wiring diagrams and parts lists, along with construction, testing and calibration instructions. A footnote indicates that the microcontroller used must be programmed before it is installed in the circuit, and that source code is not being made available.

The chip can be purchased pre-programmed, from Single Chip Solutions, P.O. Box 680, New Hartford, CT 06057-0680. The pc board, a complete kit of parts except for transformers, or an assembled and tested pc board with display, can also be purchased from the same source.

A pc board template package and detailed parts list are available free from the ARRL. Address a request for the "Oscarson Generator Monitor

Template" to Technical Department Secretary, ARRL, 225 Main St., Newington, CT 06111, enclosing a business-size SASE.

Title>TA3:A High-Directivity Receiving Antenna for 3.8 MHz
Author>Koontz, Floyd - WA2WVL
Source>QST Aug 1992, pp. 31-34
Abstract>Construction and performance of a fixed-beam receiving antenna for 3.8 MHz. It is comprised of three phased loops mounted vertically, on the ground, and in-line, at 40-foot (12 meter) intervals. It gives excellent directivity over an extremely narrow bandwidth; it is usable, but non-directional, over a broad band of frequencies.

Digest>This article describes a high-performance receiving antenna for 3.8 MHz. The author, located in western New York, uses it especially in dx contacts with Europe in the "DX Window" frequency band from 3790 to 3800 KHz. It can be used over most of the 75/80-meter band, but its front-to-back ratio drops off rapidly at frequencies farther than 10 KHz. from the center frequency where it is tuned.

The antenna is a phased array of three small loops arranged in an "end-fire binomial array". The three loops are mounted vertically in the same plane in line with the desired direction and separated at 40 foot intervals. Each is tuned to resonance by a 2-24 pf. variable capacitor connected in parallel with a 180 pf. fixed capacitor.

At the feed point of each antenna is a step-up toroidal transformer that matches the very low impedance of the loop to 50-ohms. At the two end loops, a 6 dB. resistive pad is connected between the transformer and the coax connector so that the signals from the end loops are half the amplitude of that from the center loop, as is required for maximum front-to-back ratio. Unequal lengths of feed line carry the signals to a feed box. The proportioned lengths provide phasing of 0 degrees at the center loop, plus 135 degrees at the rear loop and minus 135 degrees at the front loop.

At the feed box is a relay and a quarter-wavelength section of 50-ohm coax that acts as a delay line. The relay switches it into the line from one to the other of the end loops, thereby reversing direction. Finally, the signals from the three loops are combined in a toroidal transformer with 2:1 turns ratio to match the 50-ohm line to the shack.

Each loop is a 5-foot (1.5-meter) square with the bottom side parallel to the ground and two feet above it. It is made of number 14 copper wire inside one-inch PVC pipe. The tuning capacitors are in the center of the top side. The transformer and resistor networks are at the center of the bottom side.

In performance, the small loop antennas are inherently inefficient and so a low-noise, high-dynamic-range preamplifier is required. However, on 75 meters the signal-to-noise ratio is such that it is QRN that determines system performance, not receiver noise, so the low signal

level is not a detriment.

Computer-derived plots of directivity of the loop array are presented and compared with those of a 400-foot (121-meter) Beverage antenna. The loop array is shown to be far superior to the Beverage although the latter has long been considered to be the optimum receiving antenna for low frequencies. The loop array shows no side- or back-lobes greater than minus 50 db. whereas the Beverage has several with amplitude no more than 20 db. below the main lobe. In addition, the loop array occupies only 80 feet (24 meters) of space as opposed to the 400 foot (121-meter) length of the Beverage.

PRODUCT REVIEW
conductor: James W. Healy, NJ2L
Sr. Asst. Technical Editor

Title>PR1:The ICOM IC-737 MF/HF Transceiver
Author>Healy, Rus - NJ2L
Source>QST Aug 1993, pp. 59-62
Abstract>Specification and performance review of the new ICOM IC-737 transceiver, which replaces the older IC-751A. The reviewer found the performance, generally, to be excellent, although the unit lacks certain features of importance to some amateurs.

Digest>This new Icom transceiver is a replacement for the IC-751A. It contains most of the features common to modern solid-state transceivers, but not all. The most unexpected omission is that the front panel meter does not display SWR nor transmitter ALC and processor variables. An extra feature not common in competitive models is a built-in antenna switch to select one of two antennas. Antenna selection can be keyed to band selection for automatic operation on band changing.

Menu-driven software allows the user to configure tuning-step size, RIT and XIT, scan-speed, and a number of other functions. However, the 101 programmable memories do not store any functions other than frequency and mode.

Optional features include an automatic tuner, c.w. filters, power supplies, desk mikes, and other items. No SSB or AM i.f. filters are available.

Tests made by the ARRL laboratory verify that the manufacturer's specifications are met in almost all particulars. The reviewer's opinion is that the IC-737 receiver performance is generally outstanding. He further states that the unit is a joy to use on c.w. in most respects. However, he criticizes the rather noisy keying relay and the inability to set the c.w. side-tone. Instead the side-tone and offset are fixed at 750 Hz., which is very annoying to many c.w. operators.

On SSB, he feels that the operation is good, but suffers from the lack of an optional narrow SSB filter. Passband-tuning helps, and even the notch filter can aid in sharpening the passband to eliminate interference from adjacent signals.

The reviewer's summary is: "All things considered, I find the IC-737 an excellent mid-level transceiver that is well suited to almost every facet of MF/HF operation. Its lack of complexity makes it a good starter rig, and its collection of features makes it a smart upward move for those upgrading from a more basic platform."

Title>PR2:The Lowe HF-150 LF/MF/HF Communications Receiver
Author>Newkirk, David - WJ1Z
Source>QST Aug 1993, pp. 62-63
Abstract>A performance review of a small, simple, and portable receiver designed for short-wave listening. Its performance is good in most respects but it is subject to severe distortion from strong signals near the operating frequency.

Digest>This product is an unusually small and very simple receiver designed for short-wave listening, not amateur radio. Its front panel contains two knobs, three buttons, one switch, and an LCD display that indicates the frequency to the nearest KHz. and the tuning mode, either normal or memory.

The frequency coverage is continuous from 30 KHz. to 30 MHz. and receiving modes are CW, LSB, USB, AM, and Synchronous AM (no FM). An optional feature is an accessory key-pad for direct digital entry of frequency and for memory entries.

The reviewer found that the input filtering is woefully inadequate which makes the receiver susceptible to severe intermodulation distortion and also criticizes the feel of the tuning, calling it "frustratingly vague and gooey". His final summary calls the HF-150 "pricey" but worth careful consideration by anyone who wants a portable receiver with better-than-portable performance."

HINTS AND KINKS

Title>HK1:How to Work the MIR Space Station on Packet
Author>Mann, G. Miles - WF1F
Source>QST Aug 1993, pp. 64-65
Abstract>How to make contact with the Russian space station "Mir".

Digest>The Russian space station "Mir" is in orbit 200 miles (320 km.) above the earth in an orbit that brings it within radio range of most of the USA for about 10 minutes at a time, 8 to 10 times per day. Hams aboard are active on 2-meter packet and many hams, world-wide, have worked them. This "Hint" explains the steps that are necessary to make

contact with them.

Title>HK2:Lemon Power Revisited
Author>Sayre, Arnold W. - W8WVM
Source>QST Aug 1993, pp. 66-67
Abstract>Improvements to the "Lemon Power" battery.

Digest>Mr. Sayre follows up on an article from the March, 1992 issue of QST, written by W7ZOI and N7FKI. They described a transmitter they built that was powered by a battery made of electrodes immersed in lemon juice. It operated for only a very short time before the electrodes polarized and current stopped flowing.

In this letter, the author describes his improved "Lemon Power" battery that uses a complete lemon plus a small amount of manganese dioxide to prevent polarization.

Title>HK3:Yaesu FT-901 Band Information Selects Antennas
Author>Swancara, John W. - WA6LOD
Source>QST Aug 1993, p. 67
Abstract>Instructions for modifying a Yaesu FT-901 transceiver to provide automatic antenna switching.

Digest>The Yaesu transceiver contains a rear-panel jack labeled "Remote". D.C. voltage appearing on one of several pins indicates on which band the rig is operating. Mr. Swancara built a relay-operated band switch that takes its control voltage from the jack, automatically switching the antenna with the rig. The letter contains a wiring diagram and details.

Title>HK4:Solving RFI in the RCA Model F271888T Television
Author>Leming, Vernon - AA6UU
Source>QST Aug 1993, p. 67
Abstract>Solving RFI by adding ferrite beads over the speaker wires.

Title>HK5:Tubing Helps Identify Hand-Held Controls By Touch
Author>Murphy, Bob - WB6JJL
Source>QST Aug 1993, p. 67
Abstract>Attaching different lengths of tubing to tuning knobs allows identification by feel.

Digest:Mr. Murphy, in trying to use his HT while driving a car, found it difficult to differentiate one control from the other, from feel alone. He discovered that, by pushing different length pieces of tubing over the Squelch and Volume control knobs, he made it much easier.

TECHNICAL CORRESPONDENCE
conductor: Paul Pagel, N1FB
Associate Technical Editor

Title>TC1:Fundamentals of Radiation, Near-Fields, and More
Author>Belrose, John - VE2CV
Source>QST Aug 1993, pp. 68-69
Abstract>Basic physics of antennas, including results of computer analysis of a dipole.

Digest>This is a letter commenting on an article: "Why an Antenna Radiates" that was published in QST, November, 1992 issue, pp. 59-63. The original article was written by Ken Macleish, W7TX. This letter discusses the fundamental theory of antenna and wave propagation at the level of basic physics.

Mr. Belrose reports the results of a computer analysis of a dipole antenna resonant at 14.1 MHz., the most striking result of which is that the radiated power per unit length near the ends of the wire is substantially greater than had previously been thought. His conclusion is that more attention should be paid to the ends of dipole antennas and they should not be allowed to approach the ground too closely (as in inverted vees).

LAB NOTES (LN)
conductor: Steve Ford, WB8IMY

Title>LN1:Kits Galore!
Author>Ford, Steve - WB8IMY
Source>QST Aug 1993, pp. 70-71
Abstract>A list of amateur radio kit suppliers.

Digest>When Heathkit stopped offering amateur radio kits, many people got the impression that electronic kits were no longer available. But that is not true, and Mr. Ford has listed 23 suppliers in the USA, Canada, Europe, and Australia who offer kits at levels from beginners to advanced builders. The complete address and phone numbers are included, along with a brief description of the kits offered.

FEEDBACK (FB)

Title>FB1:"Expanded Range DC and AC Voltmeters", QST May 93
Author>Grebenkemper, John - KI6WX and Lau, Zack - KH6CP
Source>QST Aug 93, p. 69
Abstract>If a 7805 is substituted for D2, a 0.47-microfarad capacitor must be connected between the "In" and "Gnd" terminals, else the power supply will be shorted. Also, the 7805 will be destroyed if the power leads are reversed. The LM336 is much preferred over the 7805. Care must be taken in soldering the potentiometers to the foil of the PC

board.

THE WORLD ABOVE 50 MHz. (WA50)
Conductor: Emil Pocock, W3EP

Title>WA50:Coax Cables for VHF and UHF
Author>Pocock, Emil - W3EP
Source>QST Aug 1993
Abstract>Specifications and performance of various coax cables.

Digest>This month, this feature contains information about 50-ohm coax cables and their utility at VHF and UFH. Data are presented on four general types of cable, as follows:

RG-8 Types. The designation RG-8 is applied to many different kinds of cables and means only that they are all .405 inches (10.3 mm.) in diameter. They may have either braided or solid shields, solid or foam polyethylene or air dielectric, and either solid or stranded center conductors. The loss per 100 feet at 432 MHz. ranges from 2.7 for the air dielectric types to 4.8 for solid polyethylene. The air dielectric ones are superior in performance, but are sensitive to contamination from water vapor penetration because of improperly sealed connectors, which drastically increases losses.

Hardline Copper Cables. This category is made with corrugated solid copper shields and foam dielectric. They are made in sizes from a half-inch to several inches (13 mm. to several cm.) in diameter. They are generally much more expensive than other types and cannot be bent around tight corners. However, their losses are low. The half inch size is listed as having 1.5 db. loss per 100 feet and larger diameters have much lower losses.

Aluminum Cables. Cables similar to the Hardline copper types are made with solid aluminum outer conductors and copper-clad aluminum inner conductors, but they are hard to find. The loss per 100 feet for the half-inch aluminum is identical to that of hardline copper but the price is much lower, when it can be found.

New Japanese Cable. A fourth category of cables is now being manufactured by the Kansai Tsushin Densen Company of Japan. It is being distributed actively in Britain but is apparently not yet available in the USA. Their type 8D-FB cable has about the same loss characteristic as the best air-dielectric RG-8 type (2.7 db/100 ft.) but seems more flexible and less susceptable to water invasion. The 10D-FB type is slightly larger than a half-inch diameter but shows only 2.2 db/100 feet loss and it has much greater flexibility and costs far less than hardline copper.

Another major item of cost in VHF/UHF cables is the connectors. For RG-8 cables they are less than $5.00 each and of the order of only $1.00 or less for the new Japanese cables. But for hardline copper and

aluminum cables, connector costs are listed from $26.00 to $66.00 each. It is noted that some amateurs build their own connectors to save the high costs involved.

NEW HAM COMPANION (NHC)

This is a regular section of QST devoted to subjects of primary interest to newcomers to ham radio.

Title>NHC1:Just the FAX
Author>Battles, Brian - WS1O
Source>QST Aug 1993, pp. 48-49, 51
Abstract>A discussion of amateur facsimile reception and transmission.

Digest>Amateur use of facsimile (FAX) to send and/or receive high-resolution pictures is described. Many hams use surplus Western Union gear for two-way contacts with other hams, or just for receiving weather satellite photos.

Title>NHC2:A Standard 12-Volt Connector
Author>Ardai, Michael L. - N1IST
Source>QST Aug 1993, pp. 50-51
Abstract>Proposal for a standard plug/socket for amateur 12-volt d.c. power supplies.

Digest>A great deal of ham radio gear is manufactured for operation on 12-volts d.c., using separate power supplies. Unfortunately, there is no single plug/socket connector set that is universally used. The author describes a common set of connectors that are being adopted as standards by many radio clubs to facilitate operation during emergency or public service events.

Title>NHC3:The Doctor is IN
Author>Various
Source>QST Aug 1993, p. 52
Abstract>Questions and answers for newcomers.

Digest:This is a regular column that gives answers to many question frequently asked by newcomers to ham radio. Questions answered this month include: ways to mount a 2-meter amplifier in a car; "Information Servers" on the packet radio network; microwave dishes; and chimney mounts for 2-meter beam antennas.

Title>NHC4:Getting Started With RS-10
Author>Daniel, Walter - AE3HP
Source>QST Aug 1993, pp. 53-56
Abstract>Making contacts through the RS-10 (Russian) satellite.

Digest>RS-10 is an amateur radio satellite that was launched by Russia. It is one of the easiest for hams with simple equipment to use. The author tells how!

Title>NHC5:Long-Delayed Echoes - A Ham Mystery!
Author>Ford, Steve - WB8IMY
Source>QST Aug 1993, pp. 57-58
Abstract>

Digest:Since the earliest days of radio, hams have reported hearing echoes of their own transmissions delayed by many seconds. In spite of a great many investigations and several theories, the causes of these echoes have never been found. The author tells the story.

RADIO TIPS (RT)

These are short items, scattered among the articles in the NEW HAM COMPANION section.

Title>RT1:Courtesy Beeps
Author>Ford, Steve - WB8IMY
Source>QST Aug 1993, p. 51
Abstract>"Courtesy Beeps" by some repeaters remind users to listen for break-ins.

Digest>In repeater operating, only one station can transmit at a time. If someone else wants to make an announcement, they must wait for a break. It is common courtesy to hesitate a second or two before transmitting each time. This gives the opportunity for another station to break in. Perhaps it is only to say "Hello", but it may be a serious emergency!

Many repeaters force the procedure with "Courtesy Beeps". Users must wait to hear a "Beep" (or other sound) before transmitting. Otherwise, the repeater cuts them off prematurely.

Title>RT2:VHF/UHF Propagation Beacons
Author>Ford, Steve - WB8IMY
Source>QST Aug 1993, p. 56
Abstract>Beacons indicate band conditions.

Digest>Beacons are automated stations that transmit 24-hours per day on specified frequencies. Propagation on VHF and UHF bands fluctuates unexpectedly. If one is interested in operating DX, one can determine which bands are open, and in what direction the opening is occurring, by listening for beacons.

Beacons appear on subbands at 50.060 to 50.080, 144.275 to 144.300, 222.050 to 222.060, and 432.300 to 432.400 MHz. There are others on many UHF bands. For a complete list, see the ARRL Repeater Directory or

the ARRL Operating Manual.

Title>RT3:Secrecy and You
Author>from:ARRL Operating Manual, 4th Ed.
Source>QST Aug 1993, p. 56
Abstract>U.S. law regarding secrecy of private communications.

Digest>For U.S. amateurs, this is a clarification of the laws governing the monitoring of all radio frequencies. The law does not forbid monitoring of any signals that are transmitted over the ether, even if they are of a private nature. But it does forbid anyone from divulging to others the contents of any private communications, or from profiting by information so received. Further details can be found in QST, December, 1986, p. 51, or the FCC Rule Book, published by ARRL.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Persistence Gets the Derelict
Author>Williams, Warren - N0PBY
Source>QST Aug 1993, pp. 35-38
Abstract>Story of a 1000-mile chase of an errant balloon.

Digest>A non-profit company in the Denver, Colorado area has successfully launched a number of high-altitude balloons carrying a variety of instruments and radio equipment. Their sixth, and largest, was launched May 30, 1992. It was designed to rise well into the stratosphere, perhaps as high as 100,000 feet. After certain data were gathered, it was planned that the payload would be separated from the baloon and would fall to the ground by parachute.

The launch was very successful and the balloon reached 75,000 feet before leveling off. However, when all planned functions were completed and the command to separate was sent, the payload failed to separate and the balloon continued to drift eastward. The "chase teams" followed it until 3:30 a.m. the following morning, when the indications were that it had returned to the ground. After daylight, they located it and successfully retrieved both the payload and also the deflated balloon. The balloon had flown over 200 miles, and the chase cars logged over 1000 miles each before they returned home.

Title>GI2:Bringing Back the Good Old Days
Author>Seginski, John - N7NV
Source>QST Aug 1993, pp. 39-40
Abstract>Reproducing radio gear of 60 years ago.

Digest>Mr. Seginski, who has been licensed for more than 40 years, recently built a QRP transmitter, and also a regenerative receiver, from old vacuum tubes he had in his junk box. He recounts the fun he had

building them and operating them on the air. Several photographs show the details of his handiwork.

Title>GI3:Hola Enrique!
Author>Hopkins, Ken - WA9WCP and Paniagua, Enrique - EA4JO
Source>QST Aug 1993, pp. 41-42
Abstract>Family friendships through amateur radio.

Digest>This is the story of a friendship that has grown between two families, one American and one Spanish, through ham radio. They both have teenage children and, as each reaches age 17 or 18, he or she is sent for a few weeks' visit to the other family. This has happened three times, so far, and the next candidate is now age 15. It has been a broadening experience for all concerned, especially the youngsters, in addition to being a great deal of fun.

Title>GI4:Salute the Centibel!
Author>Gibilisco, Stan - W1GV
Source>QST Aug 1993, pp. 43-44
Abstract>Small improvements of performance can add up.

Digest>The author teaches a lesson in the form of fiction. The lesson is that, when antennas are concerned, a lot of small effects, each of which is too small to be noticed, can add up to a very appreciable improvement. Thus, adding a bit more height, getting the lowest possible SWR, making sure the feedline good quality and in good condition, and that the solder joints are sound, can add as much as 3 db. to the transmitted signal.

Title>GI5:Full Circle
Author>Slaughter, Guy - K9AZG
Source>QST Aug 1993, pp. 45-46
Abstract>Ironic fiction.

Digest>This is pure fiction, meant to be ironic. It is in the form of an exchange of letters between a ham who has just been given a new transceiver, and the manufacturer of the equipment. Over the course of the correspondence the ham discovers, one point at a time, that the rig does not interface with his computer, that he has to operate switches to turn the power on, he must twist a knob to tune it, it has no automatic features of any kind, and that it can transmit only in the CW mode. In the final paragraph he expresses joy over the personal nature of the series of scheduled QSOs he and the manufacturer's representative have had, and thanks him for the unique QSL card that was actually filled out by hand.

838. Why Luck Hurder is gone...

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-19 11:46:00 UTC
From: FISHERB@a1.mec.mass.EDU
Message-ID: <01HBCP1ETY6M000NJE@mr.mec.mass.edu>
Source record: 268252

Something seems "rotten in Denmark."
Is it?

The following message was to me, K1OIK, and now we know the reason Luck Hurder was dismissed from the ARRL. Luck really sounds like a criminal?

Msg #3460 From: KZ1Z Date: 17-Apr 1204Z Subj: Re: FYI - ARRL
Hi Burt,
Many thanks for your note. The issue was indeed a stupid one. HQ/Directors wanted copies of all correspondence to and from ARRL officials everywhere. Thus, Section leaders would have to copy everuything to their respective Directors. No problem, as the mass of what was asked would probably kill the policy of its own wieght. The problem...Luck advised the Section leadership of the new policy. Imagine advising the leadership of the institution of a new policy, afterall the leadership didn't get the word from the directors that such was being done. Really a stupid situation, which should have been handled in a more professional manner. Just because a Director somewhere got bent out of shape, that is no reason to terminate an employee.
Thanks for your interest.

Does anyone know of better software (windows or dos) than Pakrat? I would like something a little more friendly, and that exhibits fewer freze-ups. If it could send graphics, that would be a bonus. I've looked in the ham mags, and can't seem to find anything. I've heard that Pk-gold is good, but can't locate a source. I need sources for all recomendations. Thanks to all respondants.

Hi out there!
I like to toss up two questions about the Dayton Hamfest.

Who will be the speaker at the hamfest banquet Sat nite?
Has anyone heard what the parking situation is? I heard rumors
that the shuttle busses are doing something different.

Thanks!
de Tom KA8HUZ

841. Internet > Packet gateways??

Well, I searched news.answers here and couldn't find anything, so ...

Does anyone have a list of Internet > Packet gateways? I use N0ARY, but
would like to find others closer to some other geographic locations.

Thanks in advance and best 73.

QST DE W1AW
ARRL BULLETIN 35 ARLB035
FROM ARRL HEADQUARTERS
NEWINGTON CT APRIL 18, 1994
TO ALL RADIO AMATEURS

SB QST ARL ARLB035
ARLB035 NEW RULES ON MESSAGES

THE FCC HAS RELEASED ITS REPORT AND ORDER IN PR DOCKET 93-85,
REGARDING MESSAGES RELAYED BY AMATEUR HIGH SPEED NETWORKS. THE NEW
RULES, EFFECTIVE JUNE 1, 1&94, WILL ESTABLISH WHAT THE FCC CALLS ''A
COMPLIANCE POLICY FOR AMATEUR STATIONS PARTICIPATING IN AUTOMATIC
MESSAGE-FORWARDING SYSTEMS.''

THE NEW RULES RELIEVE MOST STATION OPERATORS IN SUCH NETWORKS OF
RESPONSIBILITY FOR THE CONTENT OF THE MESSAGES RELAYED BY THEIR
STATIONS. UNDER CURRENT RULES, ALL LICENSEES IN A CHAIN OF
FORWARDING STATIONS ARE RESPONSIBLE FOR MESSAGE CONTENT.

ORIGINATORS OF MESSAGES CONTINUE TO BE RESPONSIBLE, AND THE FIRST
FORWARDING STATIONS ARE RESPONSIBLE EITHER FOR THE CONTENT OF THE
MESSAGE OR FOR VERIFYING THE IDENTITY OF THE ORIGINATOR.

THE FCC ALSO RELIEVED REPEATER CONTROL OPERATORS OF RESPONSIBILITY
FOR INADVERTENT RETRANSMISSION OF COMMUNICATIONS THAT VIOLATE THE
RULES. ALL OPERATORS REMAIN RESPONSIBLE FOR DISCONTINUING
COMMUNICATIONS THAT VIOLATE THE RULES AS SOON AS THEY BECOME AWARE
OF THEIR PRESENCE.

MORE INFORMATION ON THE NEW RULES WILL APPEAR IN JUNE QST.

> willing to make some suggestions if I send a copy of the schematic?

And I thought I had the only remaining S2-25! The transmit frequency can be adjusted by removing the top and bottom covers and adjusting the large piston trimmer capacitor mounted vertically on the bottom PC board. Two notes of caution are in order: First, you MUST use an insulated or non-metallic tuning tool for this adjustment. Second, this adjustment is also temperature sensitive, so do not leave the covers off very long before you make the required adjustment.

As an alternative, since you know you are 2.8 kHz high right now, remove the covers and power up the radio for at least one hour on the bench. Pick any channel and measure the transmit frequency as it sits, running into a dummy load of course. Then adjust the trimmer to lower the frequency by 2.8 kHz and button everything back up. I ended up drilling a small hole in the cover so I could tweak the frequency without removing the housing.

This rig uses a novel synthesizer operating on the receiver injection frequency and a heterodyne exciter to put the transmitter on the proper operating frequency. There are no easy mods for out-of-band, but it does have entire 144-148 band coverage in 5 kHz steps, which was FAR ahead of its time. The receiver is quite good for local packet, and it will receive 9600 baud without modification since it uses fairly wide filters. The CA3089
limiter/detector IC (now obsolete) should NOT be replaced with the CA3189 substitute if you are running 9600. I took the top of the volume control out
on the 6-pin DTMF encoder socket to provide a separate packet TNC connector.

>

> the ft-23 while using an external mike. Does anyone have a service manual
> and/or schematic of which they would be willing to send copies?
>
> Ken.

If I remember correctly, this unit does NOT mute its internal microphone when the external mic is plugged in. The only cure in this situation is to cover the internal microphone or disconnect it completely from the circuit. If you put the HT in your pocket, the noise of the fabric rubbing across the grille will drive listeners batty; if you use a leather belt case in a noisy area, the radio picks up the local noise on the internal (open) microphone and seriously degrades your audio. Good Luck

I heard a story from a ham - who heard it from another...

2 men in park rock climbing - remote area of state (unknown which state)
1 fell and was badly injured, other had 2m ht in his backpack. Due to
location on side of rock face he was unable to access any 2m repeaters, or
raise anybody on simplex. His radio was wide band & modified so he
identified himself & asked for help on local sherriff frequency, they
responded.

After injured man was rescued, the sherriff asked the ham to come down to the
station to help them fill out the accident reports & to bring his ht, they
wanted to see how it works. Well, when he got there, they confiscated his ht
and charged him with several criminal offenses and fined him heavily.

Now according to my understanding, in a matter of life or property anybody is
permitted to transmit on any frequency in any mode necessary to communicate
with emergency personel. This is an FCC issued federal law.

How can a state contradict a federal law?

852. Underground Radio

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-19 16:00:57 UTC
From: bob@silver.USbm.GOV
Message-ID: <Pine.3.05.9404191257.A5964-c100000@silver>
Source record: 268266

Question: What would be the best band for communication inside of caves.

I have done much research on the subject of underground communications and have written several papers, and designed handheld and base station equipment specifically for communicating in mines and caves. The best frequency, after many years of measuring propagation in tunnels is in the range of 300 to 1500 kilohertz--yes kilohertz. The secret is both the frequency and the antenna. The antenna must be a current loop so that the radiated signal couples into the host rock or better yet couples into a passive wire extending the length of the tunnel. Without the wire, at these Medium Frequencies (MF), you can expect to communicate about 1000 to 2000 feet with a power level of 10 watts. With the wire I have communicated several miles. I have used both SSB and FM.
FM has an advantage if one of the stations has a noisy receive location.

Direct communication from underground to the surface can be easily done by keying a CW audio frequency (1700 Hz) into a large loop antenna and receiving with a loop antenna fed into a tuned audio amplifier. Great, if there is no power line noise! That can be with by a DSP filter.
Voice can be used on the downlink (hundreds of watts if you need to go deep) but because you can't carry a big enough battery, the uplink is uaually CW.

The other possibility is UHF/VHF. However, in most cases, you can throw the radio further than you can communicate. The actual distance depends on both the electrical characteristics of the rock (permeability and permittivity) and the cross sectional dimensions of the tunnel. The bigger the better. Communicating around large fallen rocks and constrictions is a problem. Side tunnels tend to act as shorted or open stubs and attenuate the signal. Leaky coax cables, with or without repeaters are often installed in the tunnels to make the communications system independent of the many variables. Sometimes frequencies that you don't think will work, do work. For example, CB works good in European salt mines but not well in the USA.

I hate to say it, but borrow a couple of CB walkie-talkies and try it.
They're cheap, don't require licensing, etc. It should give you some
idea whether longer or shorter wavelengths work better. You will also
be evaluating AM vs FM. (I don't know which will be better in a cave.)

At least, you won't be bothered by "10-4, breaker-breaker, good buddies"
underground.

From: cslye@netcom.com
Message-ID: <cslyeCoIMwp.G3v@netcom.com>
Source record: 268272

I am wondering if the Radio Shack HTX-202 is a good starter unit? All of the ones I have seen in the swap group have been sold, so it looks like I am going to buy one brand new. Just want to see if this is what I want before the end of the month so I can get it on sale. Is there any other 2m hand-held units out there for about the same price? In the mags I have got thay dont have prices, and by the time I get home to use a phone everything is closed. :(If I do go with this unit what else should I get? I am looking at a MFJ 300watt 5/8 wave groung plane 2m base antenna (MFJ-1750) to use when at home, and mabey a MFJ-1728 5/8Wave 2m mobile antenna for the auto...And use the ducky that comes with it for handheld usage... Does this sound like something that will work for me for a few years? And what about cable? The mobile comes with 12 feet, I will need about 50feet to get from my room to the top of the antenna tower. Also talking about antenna tower, I have a old TV antenna that we dont use so I want to cut the top off, and use that as my mounting tower. Does anyone see a problem with that? (Becides trying to get up that high :) Is there anything I missed? I am very new the the ham radio scene, and want to get something that will work for a bit.. But dont have alot of money :) Any help will be GREAT!

Thanks!!

860. Commercial Radio Exams at Hosstraders (Rochester NH) and Cambridge MA

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-19 16:53:38 UTC
From: w1gsl@ATHENA.MIT.EDU
Message-ID: <2p12ai$12b@senator-bedfellow.MIT.EDU>
Source record: 268273
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,rec.radio.info,sci.electronics,rec.boats

Subject: Commercial Radio Exams at Hosstraders - Rochester NH and Cambridge MA

** MROP, GROL and GMDSS exams at Hosstraders ** Sat. May 7th 1994 **

** MROP, GROL and GMDSS exams in Cambridge MA ** Sat. May 14th 1994 **

** Added "Regulatory Fee" coming in July **

The MIT Radio Exam Team will conduct exams for the General Radiotelephone Operators License, the Marine Radio Operators Permit and the Global Marine Distress and Safety Systems Maintainer Licenses. The exams will be held at 1PM Saturday May 7th at the Hosstraders Fleamarket in Rochester NH. and at 10AM Saturday May 14th in Cambridge MA at 77 Mass Ave in MIT Room 1-150.

The Hosstraders Flea is a very large amateur radio event held twice a year at the Rochester NH fairground located on Rt 202 just east of Rt 16 exit 13.

A regular schedule of exams is planned for Cambridge MA on the second Saturday of odd numbered months. For more information call Nick at 617 253 3776 (9-5).

There is a $35 examination fee. Bring the ** original ** and a copy of any commercial license or proof of passing certificates you want to claim credit for. Also bring 2 forms of picture ID, a black pen and a pencil.

** If you are thinking of getting a commercial licence now may be the time. The FCC is talking about imposing an additional "regulatory fee" after July 1. This will probably be $105 - ouch- for GROL applicants. Since the GROL is a lifetime license getting it now avoids the fee.

Copies of the question pools are available from the Government Printing office or from W5YI at 1 800 669 9594. This is probably the best study guide available for the moment. A few copies are available for pickup in Cambridge.

The General Radio Telephone Operators License is required to service transmitters in the aviation, maritime and international radio services. A Maritime Radio Operators Permit is required to operate radiotelephone stations aboard large ships and certain aviation and coast stations.

At a later date exams will be available for the Commercial Radio Telegraph operators licenses and the Global Maritime Distress and Safety Systems Operator (GMDSS-O) licenses. Amateur Extra Class operators may be particularly interested in obtaining a commercial telegraph license as they will receive credit for the 20 WPM 2nd class code exam.

The MIT Radio Exam Team operates under the auspices of the National Radio Examiners COLEM, part of the W5YI group.

861. OH5IY's meteor scatter S/W V4.2 released

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-19 16:56:58 UTC
From: Jukka Tapio Sirvi| <jsi@vipunen.hut.fi>
Message-ID: <199404191656.AA33632@vipunen.hut.fi>
Source record: 268274
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.space,rec.radio.info

Good news for meteor scatter freaks !

Version 4.2 of OH5IY's meteor scatter software has been released today.
I have uploaded it into ftp.funet.fi: pub/ham/vhf-work/mssoft42.zip.

V4.2 has lots of improvements and changes compared to V4.1. The most
exciting new feature is true, measured activity of major showers. The
graphs show the profile of each shower 96 hrs around the peak. This is
something you really want to lay your hands on !!

Other new features or changes include:

- bar graphics ZHR history for major showers since 1980.
- updated shower data and improved peak calculation algorithms.
- meteor speed correction factor used in computing ant. elevation.
- sidescatter optimum elevations computed.
- day scanning on gradient curves with EGA&VGA.
- single screen shows all numeric gradient data.
- improved text editor and find function in sked-editor.
- improved install and default parameter setting program.
- better error handling.
- mouse control.
- creates \ms and \msdata subdirectories
- installs on any existing subdirectory.
- report can be sent 2 or 3 times on CW.

There are many new features not listed above. See readme42.com to find
them all.

If you are using this software, send a message to OH5IY for his records.
If you send your packet or e-mail address, you will get the new data files
automatically after each shower. OH5IY's e-mail and packet addresses are
mentioned in the end of readme42.com.

If you can't ftp but want a copy of the new version, send a formatted 3.5"
HD disk with 4 IRCs (or equal amount of USD) inside Europe, 6 IRCs outside
Europe, + Self Addressed Envelope (SAE) to Ilkka Yrjola OH5IY, Jukolan tie 16,
FIN-45740 Kuusankoski, Finland.

The first copies of the new version will be mailed out this week.

The latest version is always available by anonymous ftp at ftp.funet.fi
(128.214.6.100): pub/ham/vhf-work/mssof*.zip. The new versions will named
as mssof421.zip, mssof422.zip, mssoft43.zip etc. (Hint: use pkunzip -d to
open the .zip file). In future look also for msdata94.zip, which will
contain all new data files. It will be updated after each shower.

:: from Radio Sweden ::
:: Number 2198--April 19, 1994 ::
::::::::::::::::::::::::::::::::::::
```

Satellite, shortwave and other electronic media news from Radio Sweden.
This week's bulletin was written by George Wood.

Packet Radio BID SCDX2198

All times UTC unless otherwise noted.

NORDIC MEDIA NEWS:

DAB AND RADIO SISU--Digital Audio Broadcasting is the next breakthrough in radio, set to replace FM with CD-quality that doesn't fade as you drive your car among the downtown urban gulleys and canyons. Either you've got the signal perfectly, or you don't have it at all.

When DAB comes to Sweden, it will bring with it a number of changes, including a new national radio network. A Swedish Radio working group has just published its report on Radio Sisu, a planned 24 hour national channel in the Finnish language.

The Finns are the largest minority group in Sweden, 400,000 strong, and Swedish Radio's Finnish Department currently produces just over an hour and a half a day of programming. The working group was led by Eija Bjrstrand of Swedish Radio in the southern city of Jnkping, whom we interviewed in today's program.

There are three target groups for the new channel: Finns who are living in Sweden, the people of the Tornedalen province of northern Sweden, who speak a dialect of Finnish, and members of the Swedish-speaking minority in Finland who may be visiting or moved to Sweden. Serving this third group means that Radio Sisu will also be programming in the Finnish dialect of Swedish. This will be done by splitting the DAB channel and providing programming at times simultaneously in two languages.

There will also be programming from Finland's YLE, including joint productions.

Sisu, by the way, is a Finnish word meaning sort of "inner energy". The launch of Radio Sisu depends on the introduction of Digital Audio

Broadcasting in Sweden, we also interviewed Christer Grewen, Swedish Radio's Director of Technical Development.

The original timetable for the introduction of regular DAB broadcasts in Sweden has slipped slightly, from the end of 1995 to early 1996. Sweden may not be the very first European country to broadcast regularly in DAB, but it will be among the first. Other pioneers include Britain and France, along with Canada.

Broadcasts will probably be around TV channel 12, where a 7 MHz allocation would permit 4 DAB blocks. Another allocation above TV channel 12 is being discussed at 230-240 MHz. Canada and France will use L-band channels around 1.5 GHz, otherwise a satellite band.

Swedish Radio will initially use 1 block, which can carry 5 stereo programs. This would be the current 4 national channels and Radio Sisu, but it can be reconfigured dynamically to carry extra narrowband channels, such as programming in minority languages. This may be done to carry the current Stockholm International service nationally.

Sweden's new private broadcasters haven't shown any interest in DAB, but those that survive can be expected to try DAB in a few years.

If DAB service begins in 1996, reasonable coverage of the entire country can be expected by the end of 1997. FM service will continue in parallel with DAB during a 10 to 12 year phase-out period. So FM will be a thing of the past here by 2010.

Britain and the Netherlands, along with Sweden, are currently carrying DAB test transmissions. Britain is expected to begin regular broadcasts next year. But there is a hitch. According to a well-informed source, Britain's Department of Trade and Industry only wants to allocate DAB frequencies for 15 years. The BBC says this is too short, and is demanding assurances of a longer period before committing itself to the investments required to build a national DAB network.

RADIO--One of the new Swedish private radio networks, Storstadsradion, also known as City Radio, is now using Femman's (the former TV5 Nordic) transponder on Tele-X, audio 8.45 MHz. (Bertil Sundberg in "Paa TV")

Some months ago we noted with surprise that Radio Sweden and the Voice, the two radio stations on the TV4 transponder on Tele-X, could also be heard on Femman's transponder (and more recently on the TV4 relay on the new Sirius satellite at the same location). It turns out that the move was made because the TV4 transponder had become unreliable. While Radio Sweden's management hasn't bothered to tell anyone, our official transponder is now Femman's, although the TV4 relay continues.

INTELSAT--Following the failure of the most recent Ariane launch, the new high-powered Intelsat 702 satellite is now due to go into orbit in late May. It will replace Intelsat 512 at 1 degree West, the same position as Norway's Thor direct broadcast satellite. TV Norge, which is currently at that position, will continue in PAL, and it will be joined by Norway's TV2 in D2-

MAC and the public broadcaster NRK in D-MAC. NRK is moving from Sweden's Tele-X satellite. (Bertil Sundberg in "Paa TV" and Jan Johansson)

We reported a few weeks ago that the major cable TV companies in the Nordic countries are working together to provide a complete program package on Intelsat 702.

SARAJEVO--Sweden is providing USD 66,000 in support to the independent radio station ZID in Sarajevo. This follows an appeal from Unesco, and the money is to be used to buy equipment for the station, an independent voice in a country where presidental power has been exerting more and more control over the media. (TT)

EUROPEAN MEDIA NEWS:

ASTRA--The German channel VOX has run out of money and is being run by a skeleton staff until April 30th. If a new investor can't be found by then, the channel will go off the air. A lot of people are hoping NBC's new improved Super Channel will take its place on Astra. (BBC Monitoring, James Robinson, Bertil Sundberg in "Paa TV", "Skyguide", and "Satnews")

The German travel channel Reise TV is to broadcast all night, 01:30-06:00 hrs UTC, on the UK Gold transponder. (James Robinson)

British Sky Broadcasting hopes to launch a second Multi-Channels package on Astra 1D, when it's launched at the end of the year. Sky is negotiating to purchase all available transponders on the new satellite. This could include channels rumored for the first package, such as the Sci-Fi Channel (now reported coming first in September, along with VH-1 and Nick at Nite), and members of the first Multi-Channels seeking a full transponder (CMT Europe, but see below). ("Skyguide" and James Robinson)

Country Music Television is reported to want to leave the current Multi-Channels package, as of September 1, when it might switch to Eutelsat II-F1, or the coming Eutelsat II-F6X a few months later. Sky is reportedly hoping to move the Travel Channel from Intelsat 601 to CMT's coded part-time slot on Astra. (Bertil Sundberg in "Paa TV") Unfortunately, the Travel Channel's current part-time slot on Intelsat doesn't match CMT's times on Astra.

EUTELSAT--There have been some Astra channels that have popped up on Eutelsat II-F1. Country Music Radio has been heard on the Super Channel transponder, audio 8.10 MHz. And the Cartoon Network and TNT tested on 11.596 GHz, with a special transmission using both ordinary PAL and the new digital standard MPEG-2 at the same time. These were special broadcasts in connection with last week's Cable and Satellite Show in London, and they're both gone now. (James Robinson)

The British authorities have told Super Channel to remove most of the Quantum "Super Shop", as only one hour a day of home shopping is permitted under EU rules. While the reduction will certainly deprive the station of income, it will hardly disappoint viewers, since it would mean increased entertaiment programming. (Bertil Sundberg in "Paa TV")

Baseball fans still smarting at Eurosport's refusal to carry the sport, can take solice in a weekly program called "This Week in Baseball", Saturdays at 17:30 CET on Super Channel, beginning May 28th. (Super Channel) (My personal appeal to Turner Broadcasting to carry Atlanta Braves games in the middle of the night on TNT has gone unanswered.)

World Tamil Television started regular broadcasts on April 14th on Eutelsat II-F3, 11.575 GHz. (James Robinson) The sound quality is terrible, but when the Vatican, Moslem, and Albanian stations are off that channel, you can indulge yourself in movies from the Subcontinent.

There's a new private Hungarian station on mornings and early afternoons until 13:00 hrs UTC on Eutelsat II-F3 called BP-1. It's on 11.638 GHz, which it shares with Polsat. (James Robinson)

A new "adult" channel called TV69 is due to start broadcasts on Eutelsat II-F3 on June 1st on 10.986 GHz (former home of Red Hot TV, which is now reported to be moving to an uplink in the former Yugoslavia, where hard currency is in demand). (James Robinson)

Besides the regular broadcasts on 10.970 GHz on Eutelsat II-F3, Morocco's RTM is using 11.006 GHz for feeds. (James Robinson)

The external service of Polish Radio Warsaw is now broadcasting on via Eutelsat II-F3 on the TV Polonia transponder on 11.080 GHz, audio 8.28 MHz. (BBC Monitoring)

The Turkish Kanal D on Eutelsat II-F4 11.575 GHz, is carrying a radio station called Radio Klub on 7.02 and 7.20 MHz. There is an Arabic language station called Radio Orient on MBC's transponder on Eutelsat II-F1 on 7.38 and 7.56 MHz. It is being carried on 5 cable systems in the London borough of Westminster. (James Robinson)

HISPASAT--New channels have begun broadcasting on Spain's Hispasat. Tele Cinco is on 12.631 GHz, Tele Deporte is on 12.149, Canal Clasico on 12.226, Canal 31 on 12.302, Telesat 5 on 12.379, and Antena 3 Satellite on 12.456 GHz. There are also feeds from the uplink station Hispasat PMC CCS Arganda on 12.660 and 12.710 GHz and others feeds on 11.538 GHz. (Bertil Sundberg in "Paa TV") All I ever see is test patterns....

A QUERY--Can anyone tell me why when we try to get UK Gold's teletext here at Radio Sweden (where we don't have a videocrypt decoder), we can get page 100, which refers us to the index on page 200. But it's impossible to get page 200 or any other page. The numbers scroll past, but the picture sticks on page 100. Why?

RUSSIA--The European Bank for Reconconstruction has pledged USD 10.3 million to start up a program to launch European satellites using Russian rockets. Under the agreement, a Proton rocket will be used next year to launch an Inmarsat-3 satellite. (Reuters, AP)

AFRICAN MEDIA NEWS:

IVORY COAST--The BBC launched its first FM service in Africa on April 15th, in the Ivorian capital Abidjan, in the face of growing FM competition in

Francophone countries. The Ivorian government ended the state broadcasting monopoly in December, 1991, and a year later agreed to allocate FM frequencies to five foreign radio stations. Four are now on the air.

The French government-run Radio France Internationale has led the assault on FM in West Africa, followed by the Gabon-based Africa Number One. In Abidjan, the BBC will also compete with a joint French-Ivorian music venture called Radio Nostalgie.

BBC Afrique will operate in stereo around the clock, adding music, hourly news, and two hours a day of BBC English programs to the existing French service output. The frequency 94.3 MHz was chosen because test transmission started in March, 1994.

The next BBC FM station in Africa will probably be in Mali's capital Bamako. The BBC has also agreement in principle to set up an FM station in the Congo's capital Brazzaville, which would also reach across the Congo river to Zaire's capital Kinshasa. (Reuters, IPS)

NORTH AMERICAN MEDIA NEWS:

TURNER--Turner broadcasting has launched its first commercial-free cable TV channel. Turner Classic Movies draws on the massive MGM film library, and will air hundreds of classic films every month. Cable subscribers will pay no direct fee to Turner for the channel, as they do to HBO and Showtime. Instead, cable operators will be able to charge their customers more for a basic cable service that includes the movie channel. The channel was launched on April 14, 1994, on the 100th anniversary of New York's first movie theater, with a ceremony at Times Square, and the opening film was "Gone With the Wind". (Reuters)

CANADA--The Anik E-2 satellite. which suffered a breakdown on January 29th, will return to operation in August, according to the president of Telesat Canada, Larry Boisvert. (AFP)

ASIAN MEDIA NEWS:

INDIA--The forthcoming Insat 2-C satellite will be much different from the earlier Insats. For the first time, India will use the Ku-band, so signals can be received with smaller dish antennas. (AIR via BBC Monitoring)

STAR-TV--Asian satellite broadcaster Star-TV announced on April 12th that it is eager to continue its partnership with MTV, despite reports of an imminent break-up. The day before, the Hong Kong daily "Eastern Express" quoted sources close to MTV as saying there was a 95 percent chance Star would drop MTV.

This follows Star's decision to remove BBC World Service TV from its northern beam and replace it with a pay film channel, seen as a concession to China, which objected to the BBC's reporting on human rights abuses. (Reuters)

CHINA--On April 16th China tightened its already strict media controls, decreeing that foreign firms would not be allowed to set up or operate cable television stations. Nor can Chinese cable networks carry foreign programs

from satellites. The edict also forbids Sino-foreign joint ventures and co-operatives in the booming cable television market. So far, many Chinese have ignored an April 5th ban on private ownership of satellite dishes. (Reuters, AP)

WEATHER SATELLITES:

GOES--The United States put the world's most sophisiticated weather satellite into orbit on April 13th. GOES-I is part of an advanced generation of five weather satellites the National Oceanic and Atmospheric Administration plans to put into orbit in the next 10 years. It was supposed to launched in 1989, and will boolster a pair of aging spacecraft, one on loan from Europe, which could break-down at any time. The European Meteosat-3 has already operated 3 years beyond its scheduled lifetime, and the old GOES-7 is out of fuel to keep it in its proper place in orbit.

The new GOES will undergo 6 months of testing before being moved into position, where it will work in tandem with the older satellites. If all goes well, GOES-I will become GOES-8 in service. (Reuters, AP)

RUSSIA--Russia says it lacks the money to launch an advanced geostationary weather satellite needed to complete the global meteorlogical network. An official at the Russian weather monitoring service says the Elektro satellite could have been launched last year had the money been available.

The satellite is intended to hover above the Indian Ocean, covering territory from Germany in the west to Khabarovsk in the east. (Reuters)

Sweden Calling DXers is the world's oldest radio program about international broadcasting. Radio Sweden has presented this round-up of radio news, features, and interviews on Tuesdays since 1948. It's currently broadcast on the first and third Tuesdays of the month.

Radio Sweden broadcasts in English:

Europe and Africa:

16:15 hrs on 1179 and 6065 kHz
17:30 hrs on 1179, 6065, 9655, and 15390 kHz
20:30 hrs on 1179, 6065 and 9655 kHz
21:30 hrs on 1179 and 6065 kHz, and
22:30 hrs on 1179 and 6065 kHz

Middle East and Africa:

17:30 hrs on 6065, 9655, and 15390 kHz
20:30 hrs on 6065 and 9655 kHz

Asia and the Pacific:

11:30 hrs on 13775, 15120, and 15240 kHz
23:30 hrs on 11910 kHz and
01:30 hrs on 9695 and 11695 kHz

North America:

12:30 and 13:30 hrs on 15240 and 17870 kHz
02:30 and 03:30 hrs on 6040 and 9850 kHz

South America:

00:30 hrs on 6065 and 9850 kHz

The broadcasts at 16:15, 17:30, 21:30, and 22:30 hrs (and weekends at 20:30) are also relayed to Europe by satellite:

Astra 1B (19.2 degrees East) transponder 26 (Sky Movies Gold/TV Asia/Adult Channel) at 11.597 GHz, audio subcarrier at 7.74 MHz,

Tele-X (5 degrees East) (Femman transponder) at 12.476 GHz, audio subcarrier 7.38 MHz.

Radio Sweden is also relayed to Europe via the World Radio Network on MTV's transponder 22 on Astra, audio 7.38 MHz, daily at 20:00 hrs UTC.

Radio Sweden can also be heard on WRN's North American service on ASC-1, on SCOLA's transponder 23, audio 6.20 MHz, daily at 00:00 and 20:00 hrs.

Contributions can be sent to DX Editor George Wood by fax to +468-667-6283, from MCI Mail or CompuServe to the CompuServe mailbox 70247,3516, from Internet to 70247.3516@compuserve.com, or to SM0IIN at the packet radio BBS SM0ETV.

Reports can also be sent to:

Radio Sweden
S-105 10 Stockholm
Sweden

Contributions should be NEWS about electronic media--from shortwave to satellites--and not loggings of information already available from sources such as the "World Radio TV Handbook". Clubs and DX publications may reprint material as long as MediaScan/Sweden Calling DXers and the original contributor are acknowledged, with the exception of items from BBC Monitoring, which are copyright.

We welcome comments and suggestions about the electronic edition, Sweden Calling DXers, and our programs in general.

Thanks to this week's contributors Good Listening!

Generally in developed underground locations leaky coaxial cable is used to
provide paths for radio signals.
Are you exploring an undeveloped cave?

Soon, soon ... there are proposals with the relevant authorities for U.K.
repeaters on 10M. One day, they'll get around to allowing them ...

> Can someone give me some 28 Mhz FM repeaters location and
> frequency in the USA, it could be worth monitoring them
> from France when the band is open.

Yes, I guess it could be. The ARRL Repeater Directory lists many, many 10M
repeaters, with the most popular frequencies (as far as I can tell) being
29.62 and 29.68.

> Thanks,
>
> 73 de f5hnk/Patrick

>instead. I've heard it was quite spectacular in Wisconsin a few nights
>ago (course we never see it here in Texas, sigh...)

Just to keep the record straight, we do see aurorae here in TX.
The recent one was visible from our observatory in WTX, where
the sky is usually very dark. The only way I saw it was via
the spectral lines that showed up on some data I was taking for
other purposes.

At least I didn't miss any good DX while I was out there...

My impression is that voice recognition software is not yet at the point where this would be practical.

An easy alternative would be to use an audio detector hooked to a keying transistor. That way, your friend could whistle or voice the code directly.

I have also heard of mouth-activated switches that handicapped people have used to send code.

You might contact the Handi-Hams organization for ideas. I have the address at home and can bring it in if needed.

I know a lot of hams are flacks, but has anyone a clue how a net gets started for some purpose, lets say to exchange information about the migrating birds and then degenerates into a net of just how are ya today, sam.

The alleged UFO nets ostensibly are for UFO gossip, but turn out to be weather and computer software exchange forums.... and so and and so forth.

Even an AT net which was organized to talk about recreational vehicles turns out to be nothing more than a Howa-good buddy... happy hour.

Conclusion all NETS are the same spelled BORING.

I need to make a detector for a 5KHz radio signal. Essentially, there is a very weak transmitter (range of about 3 feet) that sends out a 5KHz electormagnetic signal. I would like to make a detector that makes a ttl logic 1 when this signal is present. I would like as few and as small components as possible. Is there anything I can buy off-the-shelf for this? Please be gentle with me as I am a software guy and not too heavy with electronics. Appreciate any help. --Reza N6YKP

Here is the short list of I have. It's probably not complete and some of
the older ones may no longer be operating. I haven't verified any of these
except N0ARY which the one I use.

Does anyone know of any we can add to the list? Especially any in
Southern California?

>How can a state contradict a federal law?

By simply doing it. YOU have to sue the state for Federal compliance in such
cases. Our local sheriff has PL encode/decode, so getting on their freqs
would take more time to make contact. Last time I checked, they were using
125 Hz (Larimer County Colorado).

I have to disagree. The field is ripe. Speaker-dependent recognition,
especially under low noise conditions, is no longer hard to implement.
My needs are not extreme. The vocabulary does not need to be extensive
at first. Also, it would be easy to make the vocabulary context
sensitive.

879. PLEASE HELP: Take MBTI/Classical-Romantic Sorter

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-19 21:31:01 UTC
From: willwise@aol.com
Message-ID: <2p1iil$rhu@search01.news.aol.com>
Source record: 268190

I know...I know...This is off topic. But I need a wide sample and the end of the semester is near.
Please have mercy and make an exception... :-)

Thanks!

MBTI/CLASSICAL-ROMANTIC SELF-ASSOCIATION SORTER

The following survey is intended to determine what correlation, if any, exists between Myers-Briggs attitude types and romantic/classical self-associations. Correlations will be determined through the analysis of statistical data representing the results of this questionnaire. MBTI tendencies will be ascertained by analyzing responses to the Keirsey Temperament Sorter. Romantic/classical self-associations will be determined by analyzing respondent selections from lists of word-pairs and various multiple choice questions.

If you participate in this survey, please specify you internet address below and I will send you an analysis of the results of this survey as well as your personal MBTI and classical/romantic self-association results. Thanks in advance for helping me with this project.

Sincerely,
William Wise (Internet: WillWise@aol.com)

YOUR INTERNET ADDRESS : _____

If this survey has reached you through a local system (not through the internet), simply state that you would like to receive your results in the space provided above.

SECTION I - KEIRSEY TEMPERAMENT SORTER (MBTI)

PLEASE READ THESE INSTRUCTIONS CAREFULLY

Select only ONE answer from each pair of possible responses. Indicate your answer with an 'X' placed between the appropriate set of brackets. NOTE: If you are already familiar with your personal Myers-Briggs Type Indicator or Keirsey Temperament Sorter result you may specify it in the space provided immediately below and skip to SECTION II of the survey.

PREVIOUS MBTI RESULT, IF ANY : [ ]
If you have taken the Myers-Briggs Type Indicator or Keirsey Temperament Sorter before and remember your test result please record it in the space

provided above and skip to SECTION II of the survey.

This test is Copyright (C) 1978 By David Keirsey and Marilyn Bates.

01. At a party do you
[ ] interact with many, including strangers
[ ] interact with a few, known to you

02. Are you more
[ ] realistic than speculative
[ ] speculative than realistic

03. Is it worse to
[ ] have your "head in the clouds"
[ ] be "in a rut"

04. Are you more impressed by
[ ] principles
[ ] emotions

05. Are you more drawn toward the
[ ] convincing
[ ] touching

06. Do you prefer to work
[ ] to deadlines
[ ] just "whenever"

07. Do you tend to choose
[ ] rather carefully
[ ] somewhat impulsively

08. At parties do you
[ ] stay late, with increasing energy
[ ] leave early, with decreased energy

09. Are you more attracted to
[ ] sensible people
[ ] imaginative people

10. Are you more interested in
[ ] what is actual
[ ] what is possible

11. In judging others are you most swayed by
[ ] laws than circumstances
[ ] circumstances than laws

12. In approaching others is your inclination to be somewhat
[ ] objective
[ ] personal

13. Are you more
[ ] punctual
[ ] leisurely

14. Does it bother you more having things
[ ] incomplete
[ ] completed

15. In your social groups do you
[ ] keep abreast of other's happenings
[ ] get behind on the news

16. In doing ordinary things are you more likely to
[ ] do it the usual way
[ ] do it your own way

17. Writers should
[ ] "say what they mean and mean what they say"
[ ] express things more by use of analogy

18. Which appeals to you more
[ ] consistency of thought
[ ] harmonious human relationships

19. Are you more comfortable in making
[ ] logical judgments
[ ] value judgments

20. Do you want things
[ ] settled and decided
[ ] unsettled and undecided

21. Would you say you are more
[ ] serious and determined
[ ] easy-going

22. In phoning do you
[ ] rarely question it will all be said
[ ] rehearse what you'll say

23. Facts
[ ] "speak for themselves"
[ ] illustrate principles

24. Are visionaries
[ ] somewhat annoying
[ ] rather fascinating

25. Are you more often
[ ] a cool-headed person
[ ] a warm-hearted person

26. Is it worse to be
[ ] unjust
[ ] merciless

27. Should one usually let events occur
[ ] by careful selection and choice
[ ] randomly and by chance

28. Do you feel better about
[ ] having purchased
[ ] having the option to buy

29. In company do you
[ ] initiate conversation
[ ] wait to be approached

30. Common sense is
[ ] rarely questioned
[ ] frequently questionable

31. Children often do not
[ ] make themselves useful enough
[ ] exercise their fantasy enough

32. In making decisions do you feel more comfortable with
[ ] standards
[ ] feelings

33. Are you more
[ ] firm than gentle
[ ] gentle than firm

34. Which is more admirable
[ ] the ability to organize and be methodical
[ ] the ability to adapt and make do

35. Do you put more value on the
[ ] definite
[ ] open-ended

36. Does new and non-routine interaction with others
[ ] stimulate and energize you
[ ] tax your reserves

37. Are you more frequently
[ ] a practical sort of person
[ ] a fanciful sort of person

38. Are you more likely to
[ ] see how others are useful
[ ] see how others see

39. Which is more satisfying:
[ ] to discuss an issue thoroughly
[ ] to arrive at agreement on an issue

40. Which rules you more:
[ ] your head
[ ] your heart

41. Are you more comfortable with work that is
[ ] contracted
[ ] done on a casual basis

42. Do you tend to look for
[ ] the orderly
[ ] whatever turns up

43. Do you prefer
[ ] many friends with brief contact
[ ] a few friends with more lengthy contact

44. Do you go more by
[ ] facts
[ ] principles

45. Are you more interested in
[ ] production and distribution
[ ] design and research

46. Which is more of a compliment:
[ ] "There is a very logical person."
[ ] "There is a very sentimental person."

47. Do you value in yourself more that you are
[ ] unwavering
[ ] devoted

48. Do you more often prefer the
[ ] final and unalterable statement
[ ] tentative and preliminary statement

49. Are you more comfortable
[ ] after a decision
[ ] before a decision

50. Do you
[ ] Speak easily and at length with strangers
[ ] find little to say to strangers

51. Are you more likely to trust your
[ ] experience
[ ] hunch

52. Do you feel
[ ] more practical than ingenious
[ ] more ingenious than practical

53. Which person is more to be complimented: on of
[ ] clear reason
[ ] strong feelings

54. Are you inclined more to be
[ ] fair-minded
[ ] sympathetic

55. Is it preferable mostly to
[ ] make sure things are arranged
[ ] just let things happen

56. In relationships should most things be
[ ] re-negotiable
[ ] random and circumstantial

57. When the phone rings do you
[ ] hasten to get to it first
[ ] hope someone else will answer

58. Do you prize more in yourself
[ ] a strong sense of reality
[ ] a vivid imagination

59. Are you drawn more to
[ ] fundamentals
[ ] overtones

60. Which seems the greater error:
[ ] to be too passionate
[ ] to be too objective

61. Do you see yourself as basically
[ ] hard-headed
[ ] soft-hearted

62. Which situation appeals to you more:
[ ] the structured and scheduled
[ ] the unstructured and unscheduled

63. Are you a person that is more
[ ] routinized than whimsical
[ ] whimsical than routinized

64. Are you more inclined to be
[ ] easy to approach
[ ] somewhat reserved

65. In writings to you prefer
[ ] the more literal
[ ] the more figurative

66. Is it harder for you to
[ ] identify with others
[ ] utilize others

67. Which do you wish more for yourself
[ ] clarity of reason
[ ] strength of compassion

68. Which is the greater fault:
[ ] being indiscriminate
[ ] being critical

69. Do you prefer the
[ ] planned event
[ ] unplanned event

70. Do you tend to be more
[ ] deliberate than spontaneous
[ ] spontaneous than deliberate

880. Re: 10 M repeaters ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-19 21:31:12 UTC
From: rwilkins@ccnet.com
Message-ID: <2p1ij0$o7g@ccnet.ccnet.com>
Source record: 268191

Patrick Arnoul (parnoul@gaap.saclay.cea.fr) wrote:
: Hi there,

: As far as I know, we don't have any repeater in the 10 Meters
: band down here in Europe.

: Can someone give me some 28 Mhz FM repeaters location and
: frequency in the USA, it could be worth monitoring them
: from France when the band is open.

: Thanks,

: 73 de f5hnk/Patrick

You may want to monitor these fm frequencies

29.50 simplex
29.60 simplex vary active

29.62 out 29.52 in repeater
29.64 out 29.54 in repeater
29.66 out 29.56 in repeater
29.68 out 29.58 in repeater

Repeaters may require ctcss tone access

You may work simplex on the output of the repeater, if you do not have
the tone to get in. Have Fun

Bob

881. Re: HTX-202 Is this a good starter rig?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-19 21:45:40 UTC
From: wdh@oversteer.Eng.Sun.COM
Message-ID: <2p1je5$rr5@engnews1.Eng.Sun.COM>
Source record: 268192

There is another ~$200 HT that should be considered
when looking at the Radio Shack rigs. I've had good
experience with the Alinco dj-162. AES is closing these
out at $200. This includes both a nicad and a charger
and an alkaline battery case. I have two of these radios.
I bought the second recently based on my positive
experience with the first.

As far as the Radio Shack unit goes-I saw my first one up
close recently. Personally I prefer my Alincos. The RS
radio is BIG. I can't see carrying the RS rig in my ski
jacket pocket. The RS rig did have good sounding audio
persumably due to its relatively larger speaker.

The RS rig does not have out of band receive...yes I understand the
tradeoff. The only time I get any intermod is when using
my outside antenna. No intermod or spurious signals in the
car or mobile except downtown...where my Icom mobile also
goes crazy.

I'm not saying the RS radio is not good or the Alinco
is better...for everyone for every use. I just want
to keep Alinco's on the shopping list for a ~$200 HT.
I've been very happy with the Alinco.

...Dennis Henderson, N6TTW

ps: Whatever you buy get a Hotrod type ~40inch telescopic
antenna for when you really need to be heard. The Larsen
version unscrews in the middle and is easily carried
in a small camera bag that I use to carry the HT and
other accessories.

882. How to build FH xmitter/rcvr pair?

Newsgroup: rec.radio.amateur.misc

You can try telnetting into 44.16.0.61. That's the JPL Internet link in
Pasadena. They might still have the direct conference link which is a
3600 port number, so just add 3600 at the end of the telnet address. As
far as I know, there is no password required. Good luck.

You may want to go back and review T1A07. :-)

886. HELP WITH A BOSNIA CONTACT

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-20 00:32:57 UTC
From: flinxwei@magnus.acs.ohio-state.edu
Message-ID: <2p1t7p$og5@charm.magnus.acs.ohio-state.edu>
Source record: 268198

I have been approached to help a Bosnian resident help get in touch with his sister in Yugoslavia. My questions are:
-what are the welfare net frequencies (if any)
-are there any netters who are active on these links

Thanks, from not only me, but the gentleman trying to find out the status of his sister.

Here is a couple of key addresses to voice your opposition to Illinois House Bill 4180, the proposed banning of DC powered scanning equipment. Tom Cross is the Representative proposing this bill.

Illinois Rep. Tom Cross
541 Countryside Shopping Center
Yorkville, IL 60560

2138 -O Stratton Building
Springfield, IL 62706

Illinois Govonor Jim Edgar
State Capitol
Springfield, IL 62706

Representatives for your district may be found by calling your local public library.

* * NON-RESIDENTS OF ILLINOIS...Your input is just as important. If this law is passed, this may give YOUR representatives to propose laws similiar to this in your state. Please send your letters to the above two individuals.

Jerry

Pratas on DXAC Agenda

ARRL DX Advisory Committee Chairman Robert Beatty, W4VQ, has
announced that the question of new country status for Pratas Island
(BV9) is back on the DXAC agenda.

Dr. Bolon Lin, BV5AF, of the Chinese Taipei Amateur Radio League
(CTARL) is now in contact with the DXAC. Dr. Lin is providing
answers to committee questions. A vote on the question of DXCC
country status for Pratas has not been scheduled at this time.

SB DX ARL ARLD022
ARLD022 DXAC vote results

DXAC vote results

By unanimous vote, the ARRL DXAC (DX Advisory Committee) passed a
recommendation to delete Walvis Bay (ZS9) and Penguin Islands
(ZS0,1). The DXAC decided that these entities no longer meet the
DXCC criteria following their turnover to Namibia by South Africa.
This recommendation has been sent to the Awards Committee along with
a suggested effective date of March 1, 1994.

In another ballot, the DXAC voted down a proposal to add additional
single band awards to the DXCC program. (There were 13 no and 2 yes
votes with 1 abstain.)

The committee also voted down a proposal to add a 10-Meter DXCC
Honor Roll by a 15 to 1 margin. Committee members expressed support
for the mode-specific Honor Rolls that now exist (Mixed, Phone, CW
RTTY).

I'm just now shopping for a 2m/440 HT and am trying to make the same decision. The local HRO has the Kenwood TH-78A for $389 and the Yaesu FT-530 for $399, so price doesn't seem to be a factor.

I'm totally new to radio (no license yet), so I'm not sure how much to value the different features, but I have plenty of time to learn/shop.

They can both be modified to open up the Rx and Tx ranges, but it sounds like there are many weak areas as you get away from the ham bands.

After mods, the Kenwood does these:
Rx: 50-180 300-400 400-512 800-950
Tx: 136-180 400-512

The Yaesu does these:
Rx: 110-180 300-500 800-859
Tx: 130-180 400-470

At first, I liked the idea of getting FM Broadcast Radio (88-108) on the Kenwood, but now I read that it's modulated differently (wide-band?) and doesn't come in anyway, so that's out.

The Kenwood has a six-character alphanumeric display & memory, while the Yaesu does not. Apparently, you can get an optional microphone for the Yaesu that does have an alpha display, but I haven't seen it, and I'm sure it's pricey.

The Yaesu has "CTCSS" included while it's an extra option on the Kenwood. I have no idea what that feature does, but radios that have it seem to boast about it. The Yaesu also has some kind of Automatic Tone Search feature that I don't yet understand.

Both radios can do VHF/VHF and UHF/UHF, but some people say that this adds interference.

The Yaesu has 82 memories, the Kenwood 50 (expandable to 250?). The Yaesu has a light-up keypad, and I don't think the Kenwood does. The Kenwood does, however, have some internal video games :-).

I've only been shopping for a few days, and I'm beginning to wonder why I don't see much of the Kenwood TH-78A mentioned in comparisons. The general list of recommended models seems to be: ICOM W21AT, Standard C558, Yaesu FT-530, Alinco DJ-580T with no mention of the Kenwood. Hmmm... Is there some glaring problem with this unit that takes it right out of the running from the start?

I'm anxious to hear what other net.folks have to say about these two models.

892. Re: dual band: is (one of) Yaesu, Icom, or Kenwood a good choice?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-20 02:26:58 UTC
From: sknapp@iastate.edu
Message-ID: <2p23ti$95a@news.iastate.edu>
Source record: 268204

I had an Icom 2SAT, then a 24AT, and ended up with a FT530.

I love the backlit keypad and display. I like the size of the radio, and the 'quality feel' of the radio. The user interface needs work.

The differences from my Icom's were minor and I got over it. But one thing I wish the 530 did was in SET mode (where some of the more 'obscure' settings are) the keys are all redefined but not labled. AND to help even more, you can not just hit a key to see what it is without changing that setting. I would like to have a way to poke around for a setting w/out changing anything.

I really liked Icom's SET mode, it was a menu like thing where you used the arrow keys to choose the field, then the tuning knob to change that setting.

Each radio has its quirks. Find the one where the quirks least annoy you.

893. Update to Storm Spotting Freq List

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-20 03:01:36 UTC
From: capskb@alliant.backbone.uoknor.edu
Message-ID: <2p25ug$7ts@romulus.ucs.uoknor.edu>
Source record: 268205

I've completed the latest round of revisions to the frequency lists
and Chris Novy has posted the updated lists at the usual source.

1) Storm Spotting Frequencies: SPOTFREQ.DOC
Ham radio and Civil Defense frequencies which have carried useful info
during severe weather are listed, primarily in the 2m band. The list
focuses on the Plains States where most of the mobile spotting is done.
The area is roughly within a line from E. Wyoming to Indiana to
Alabama to SW Texas to Wyoming.

2) TV radar info: CHASE-TV.DOC
VHF TV stations and UHF repeaters are listed, along with comments
about radar and weather warning display capabilities (where known).
The Plains States are covered. The area is roughly within a line from
E. Wyoming to Indiana to Alabama to SW Texas to E. Wyoming.

The lists are available via ftp:
ftp vmd.cso.uiuc.edu
login: anonymous
password: your email address
cd WX
get SPOTFREQ.DOC
get CHASE-TV.DOC

A recent IP number for vmd.cso.uiuc.edu: 128.174.5.98

University of Oklahoma users can obtain a copy via metgem or
geohub at users:[kbrews]spotfreq.doc and chase-tv.doc.

Any further additions or corrections are welcome. E-mail to me
at the address below. To keep the work load to a finite size,
the area restriction will be maintained.

Does anyone know what is considered dangerous RF and Microwave signals. Somehow I remember that between 100K and 30GHz your not suppose to expose human's to more than 194V/meter (the spec could have been either an ANSI, IEEE, or OSHA spec).

Anybody know if a spec exists detailing what RF and microwave field strengths and frequencies that are considered dangerous?

Same question I had....

I went with the FT-530. It just has too may features I could not
resist. One of the things I was looking at is what the Sr. Ham's were
buying (Those who have had two, three, four, or more HT's) There's a
joke about all the Ft-530 owners starting there own net, due to the fact
there are so many in use.

How to Use the WB7TPY
Packet <-> Internet Gateway

First, some brief operational notes:

(1) Messages must not contain any foul language, or commercial purpose.
(2) Messages can only be sent to countries that the United States has
a third-party agreement. All others will be destroyed.
(3) Messages from the internet should be less then 5K in length.
No files should be sent.
(4) If you have questions, please do not hesitate to contact me either on
packet radio: WB7TPY@WB7TPY.AZ.USA.NA -or-
Internet : david@stat.com

(5) Have fun. Use the gateway as much as you like. That is what it is
there for.

From Internet to Packet

Send mail to the internet address of:

gate@wb7tpy.ampr.org

The first line of text must contain a full packet address, preceded with the
word "Packet:"

For example, mail to my packet address, would have the first line of text;

Packet: wb7tpy@wb7tpy.az.usa.na

** NOTE: this line MUST be left justified.

From Packet to Internet

Send as private mail (never a bulletin) to the packet address of:

gate@wb7tpy.az.usa.na

The first line of text must contain a full domained internet address,
proceeded with the word "Internet:"

For example, mail to my internet address, would have the first line of text;

Internet: david@stat.com

Editor, HICNet Medical Newsletter
Internet: david@stat.com FAX: +1 (602) 451-1165

Greater than 2 MeV Electron Fluence for 19 APR is: 1.8E+08

SYNOPSIS OF ACTIVITY

Solar activity was low. Newly numbered Region 7704
(N08E85) produced an impressive C2/2N flare at 19/1700UT with
an associated loop prominence. This region is just now showing
a small H type spot group. Region 7701 (N07E12) displayed just
a minor B1/SF flare at 19/1247UT. This region is decaying.
Region 7703 (N09E31) was also numbered today.

Solar activity forecast: solar activity is expected to be
very low to low. Region 7704 has the best chance of producing

C-class activity and an outside chance of an isolated M-class flare.

The geomagnetic field has been at quiet to minor storm levels for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is expected to be mostly unsettled for the entire forecast period.

Event probabilities 20 apr-22 apr

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 20 apr-22 apr

A. Middle Latitudes
Active 35/35/20
Minor Storm 15/15/10
Major-Severe Storm 05/05/05

B. High Latitudes
Active 35/35/25
Minor Storm 20/20/15
Major-Severe Storm 10/10/05

HF propagation conditions finally returned to near-normal values over the low and middle latitudes and began approaching near-normal values over the high and polar latitudes. These higher latitude regions continued to experience minor signal degradation, but transpolar and transauroral circuits are far better than they were two days ago. MUFs remain depressed by between approximately 15 to 25 percent, but are also slowly recovering. Similar gradually improving conditions are expected over the next 3 days. Enjoy it while it lasts; the recurrent coronal hole which has had a profound impact on global communications over the last three months is due to return in early May.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep

IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

I am wondering if the Radio Shack HTX-202 is a good starter unit? All of the ones I have seen in the swap group have been sold, so it looks like I am going to buy one brand new.

The fact that they enjoy fast sales on the secondary market should give you a clue to their reputation. I think you'll be happy with the HTX-202 unless you expect it to do double duty as scanner outside of the amateur radio band.

I can't say anything about the MFJ antenna, perhaps someone else with better knowledge can offer you advice there.

Use the finest coax that you can afford. Fifty feet of lossy coax will kill your signal and negate the advantage of the elevation.

Sounds like a good plan overall.

Let us know what you decide and how it works.

I am quite happy with PKGOLD. It is a bit hard to learn and the
documentation STINKS although the online help is pretty good. It has a high
level of function. It does not support a mouse though. I would sure like to
see a windows version. I think it is the best available. I think MUCH
better could be produced.

This is the second story of this type that I have heard. I think it is
antoher URBAN LEGEND myself. They would have no right to confiscate and
anyone who brought the ht along would have to be pretty stupid anyway.
Criminal act, give me a break.

Hi All,
I am looking for information on the HTX-202. I need a
modification on how to eliminate the LONG TX hang time when I transmit
touch tones. I can not use the auto-patch on any repeaters in my area do
to this LONG TRANSMITTER hang time.

If anyone has any info on how to defeat this feature please E-Mail me at
TJA@Panix.Com

Thank you in advance.

Monday the SS Jeremiah O'Brien left San Francisco for Normandy for the festivities being held June 6 to comemorate the 25th anniversary of the Normandy invasion. This is the last operating Liberty Ship, and is crewed by volunteers. Does anybody know if they have an amateur operation? Any info about call signs, skeds, etc. would be appreciated.

However, the first receiver local oscillator of cellphones *do* cover
915-940 MHz. If you're going to tear into a cellphone, you can use this
LO signal as a source. (If you know the service codes, you can lock the
phone on any channel you like.) This makes a good cheap signal generator
for the 915-925 MHz amateur allocation.

Has anybody turned-up the mike gain on the W2A? Do you remember where the pot was? That little schematic they send with the radio isn't very helpful. Have you changed the plastic lens over the display? Any help appreciated.

Please email as I don't usually get the time to read this group.

73, Jim WB1B

>in court.

First of all, the FCC *regulation* in question only waives liability
under *FCC regulations* for out of service contacts. It does not offer
blanket immunity from prosecution for violation of federal, state, or
local laws. As I understand this case, the sheriff charged the ham with
interference with an officer because of his transmissions on the sheriff's
dispatch channel. The issue of out of band transmission is only tangental
to this charge since the *method* used to break state law is irrelevant
to the charge.

Yes, the HTX-202 is a good 2 meter HT. The only rig in its price class
is the Alinco 2 meter HT, and it isn't as good at rejecting out of band
signals.

>If I do go with this unit what else should I get? I am

>But dont have alot of money :) Any help will be GREAT!

Comet base and mobile antennas are *much* better than the MFJ antennas you
list. Larsen mobile antennas are also excellent. There should be no problem
mounting your base antenna on an old TV mast as long as it can stand the
wind load. If you remove the old TV antenna first, it probably will. If
the budget is really tight, a copper pipe J-pole will do nicely. You can
make this for less than $25. As to cable, the *best* flexible cable is
Belden 9913 at about $0.60 per foot. It's worth it if you're only going to
be running HT power. (Actually I think good cable is always worth it, but it
becomes especially important when you can't afford to lose much power to the
cable.)
